FOREWORD

The Federal Power Act was originally enacted as the Federal Water Power Act, approved June 10, 1920 (41 Stat. 1063, 16 U.S.C. 791–823). The Federal Power Commission was reorganized January 1, 1931, as an independent Commission under the act approved June 23, 1930 (46 Stat. 797). By title II of the Public Utility Act of 1935, approved August 26, 1935 (49 Stat. 838), the original Federal Water Power Act was made part I of the "Federal Power Act" and parts II and III were added. The Federal Power Act was amended May 28, 1948 (62 Stat. 275), August 7, 1953 (67 Stat. 461), August 15, 1953 (67 Stat. 587), June 4, 1956 (70 Stat. 226), and August 28, 1958 (72 Stat. 941 at 947). The Commission also administers the Natural Gas Act, approved June 21, 1938 (52 Stat. 821, 15 U.S.C. 717–717w), as amended February 7, 1942 (56 Stat. 83, 15 U.S.C. 717f), July 25, 1947 (61 Stat. 459, 15 U.S.C. 717f), March 27, 1954 (68 Stat. 36, 15 U.S.C. 717(c)), and August 28, 1958 (72 Stat. 941 at 947; 15 U.S.C. 717r), and has certain duties under the Tennessee Valley Authority Act, approved May 18, 1933 (48 Stat. 1075), and amendments thereto; the Bonneville Act, approved August 20, 1937 (50 Stat. 731); the Fort Peck Act, approved May 18, 1938 (52 Stat. 403); and under various Flood Control and River and Harbor Acts (notably the Flood Control Act of 1944, approved December 22, 1944 (58 Stat. 887)), and other statutes, as well as Executive Orders.

This volume, the twenty-ninth of a series, contains all the formal opinions and accompanying orders of the Federal Power Commission rendered, January 1, 1963, to June 30, 1963, inclusive. In addition to the formal opinions, there have been included intermediate decisions which have become final and selected orders of the Commission issued during such period.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63–72

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 2, 1963)

On September 20, 1962, El Paso Natural Gas Company (Applicant) filed in Docket No. CP63–72 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 6 miles of 16-inch O.D. pipeline, together with appurtenant facilities, looping a segment of its North Seattle Lateral in Snohomish County, Washington, all as more fully set forth in the application on file with the Commission.

The application shows that the North Seattle Lateral is utilized by Applicant for the sale and delivery of natural gas to Washington Natural Gas Company (Washington Natural) for resale and distribution by the latter in the North Seattle area. It appears that the proposed facilities are necessary in order to enable Applicant to meet Washington Natural's estimated increased peak day requirements. The application indicates that the design capacity of the present North Seattle facilities is approximately 50,000 Mcf per day and that estimated peak day requirements of Washington Natural for the area served by Applicant's North Seattle facilities for the 1962–63, 1963–64 and 1964–65 heating seasons are 60,551 Mcf, 66,963 Mcf and 73,428 Mcf, respectively.

The total estimated cost of the proposed project is $363,000, which cost will be financed out of current working funds, supplemented as necessary by short-term bank loans.

Pursuant to due notice, a public hearing was held in Washington, D.C., on December 11, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized in paragraph (A) above shall be constructed and placed in actual operation by Applicant, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NOS. CP62-85, CP62-178; IOWA ELECTRIC LIGHT AND POWER COMPANY, DOCKET NO. CP62-119; AMERICAN GAS COMPANY OF WISCONSIN, INC., DOCKET NO. CP63-34; WISCONSIN SOUTHERN GAS COMPANY, INC., DOCKET NO. CP63-11; CITY OF TIPTON, IOWA, DOCKET NO. CP63-54; GREAT PLAINS NATURAL GAS CO., DOCKET NO. CP63-78

ORDER PERMITTING WITHDRAWAL OF APPLICATION FOR AN ORDER PURSUANT TO SECTION 7(a) OF THE NATURAL GAS ACT

(Issued January 2, 1963)

On September 28, 1962, Great Plains Natural Gas Company (Great Plains) filed an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Northern Natural Gas Company (Northern) to establish physical connection of its transmission facilities with the distribution facilities proposed to be constructed by Great Plains and to sell and deliver to the latter natural gas for resale in 31 communities in Minnesota, 2 communities in South Dakota, and 1 community in North Dakota.

Also, on September 28, 1962, Applicant filed a petition to intervene in the consolidated proceedings of Northern Natural Gas Company, *et al.*, Docket No. CP62–85, *et al.*, and a motion to consolidate the Section 7(a) application of Great Plains with the aforementioned proceedings. In its order issued October 19, 1962, the Commission granted the petition and motion of Great Plains.

On November 13, 1962, Great Plains filed a motion for withdrawal of its application in Docket No. CP63–78. In its motion Great Plains states that the feasibility of its project depended upon interruptible sales to two power plants and that it has not been able to execute a contract with one of the plants. Because of this unexpected event the motion indicates that it has become necessary for Great Plains to abandon its plan for the project as proposed in its application in Docket No. CP63–78. In view of the fact that the project must be revised accordingly, Great Plains states that it cannot present a full and complete case during the hearing now in progress. Therefore, Great Plains moves for withdrawal of its application herein.

The Commission finds:

Good and sufficient cause exists to allow the withdrawal of the application for an order pursuant to Section 7(a) of the Natural Gas Act filed by Great Plains Natural Gas Company on September 28, 1962.

The Commission orders:

Great Plains Natural Gas Company is hereby allowed to withdraw its application for an order pursuant to Section 7(a) of the Natural Gas Act, directing Northern Natural to establish physical connection between its transmission facilities and proposed facilities of Great Plains and to sell and deliver natural gas to Great Plains for resale in certain specified communities.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

THE SHAMROCK OIL AND GAS CORPORATION, DOCKET NO. G–14077

ORDER DENYING MOTION TO TERMINATE PROCEEDING

(Issued January 2, 1963)

The Shamrock Oil and Gas Corporation (Shamrock) on February 20, 1962, as supplemented June 1, 1962, filed a motion requesting the Commission to terminate the proceeding in Docket No. G–14077 and to terminate the refund obligation with respect thereto. In such proceeding the Commission suspended and subsequently permitted to become effective subject to refund Shamrock's proposed increased rate of 12.5¢ [1] per Mcf at 14.65 psia for sales of natural gas to Northern Natural Gas Company at the tailgate of Shamrock's McKee Gasoline Plant in Sunray, Moore County, Texas (Texas Railroad Commission District No. 10).

In support of its motion, Shamrock presented certain company-wide cost-of-service data purporting to show that its average unit jurisdictional costs were in excess of its comparable revenues for 1960. Shamrock also states that the increased rate of 12.5¢ per Mcf involved herein does not exceed the applicable area price level of 11.0¢ per Mcf for increased rates as established by the Commission's Statement of General Policy No. 61–1, as amended, based on its contention that the area price level is applicable at the wellhead instead of the tailgate of the processing plant. Thus, Shamrock claims that if 2.52¢ per Mcf is deducted from the 12.5¢ per Mcf rate for the cost of gathering and compres-

[1] Includes 1.0¢ per Mcf for compression, but does not include tax reimbursement.

sion, the resulting wellhead rate is 9.98¢ per Mcf which is below the area price level of 11.0¢ per Mcf.

Even if we were processing increased rate filings by independent producers on a cost-of-service basis, as we are not,[2] we should not set aside the suspension of an over ceiling rate until any purported company-wide cost-of-service submitted by a producer could be fully tested at a hearing. In fact, however, as we announced in *Phillips* we are considering all independent producer rate increases filed since the date of that decision (except those the subject of settlement proceedings) in area rate proceedings.

With respect to Shamrock's other contention, the Statement of General Policy No. 61–1 makes it clear that the area price levels set forth therein are applicable to pipeline quality gas as that term is generally understood in each area. Inasmuch as the gas, which is later processed at Shamrock's plant, feeds into Shamrock's gathering lines at pressures between 110 and 200 psig, it would appear that such gas cannot be considered pipeline quality gas. Under these circumstances, the applicable area rate level is properly comparable with the price of Shamrock's gas at the tailgate of the plant. There is thus no justification under the policy statement for permitting Shamrock to charge a rate in excess of the 11.0¢ per Mcf ceiling rate without refund obligation pending determination of the just and reasonableness of Shamrock's rate in an area rate proceeding.

The Commission finds:

For the reasons hereinabove stated, Shamrock's motion to terminate the proceeding in Docket No. G–14077 should be denied.

The Commission orders:

Shamrock's motion to terminate the proceeding in Docket No. G–14077 is hereby denied.

[2] The only exception to this rule is with respect to a number of Section 4(e) proceedings set for hearing prior to the *Phillips* decision where the making of the record was well advanced as of that date.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. G–14562; CONTINENTAL OIL COMPANY, DOCKET NO. G–13680; MAGNOLIA PETROLEUM COMPANY (SOCONY MOBIL COMPANY), DOCKET NO. G–13827; NEWMONT OIL COMPANY, DOCKET NO. G–13948

ORDER GRANTING MOTION TO OMIT THE INTERMEDIATE DECISION, APPROVING PROPOSED SETTLEMENT AND ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 2, 1963)*

On January 8, 1962, the Presiding Examiner, after having heard the matters then embodied in the above-docketed applications, and briefs having been filed, issued his Initial Decision dismissing all of the applications. In brief, there was then proposed (1) a so-called leasehold acquisition by Tennessee Gas Transmission Company (Tennessee) of offshore Louisiana gas producing acreage held by Continental Oil Company, Socony Mobil Company and Newmont Oil Company, hereinafter referred to as MCN,[1] and (2) the construction and operation, by Tennessee, of approximately 23 miles of 12-inch pipeline so as to enable it to transport to a point on its main transmission system volumes of gas to be

*Amended by order issued February 11, 1964, 31 FPC 411.

[1] Block 46 Field, Vermilion Parish and the East Cameron Block 64 Field.

produced from the aforesaid acreage. The Presiding Examiner in dismissing the applications found, among other things, that the method of acquiring the MCN gas under the so-called leasehold acquisition proposal was not required by the public convenience and necessity.

By our order of March 26, 1962, 27 FPC 610, we accepted amended filings to all of the instant applications and reopened and remanded the proceeding to the Presiding Examiner. In essence, these amended filings reinstated gas purchase contracts entered into by the applicants in 1957 and filed with this Commission in these docketed applications in the latter part of 1957. Instead of acquiring the MCN gas under a so-called leasehold acquisition, it was here proposed that Tennessee purchase the MCN gas on a per Mcf basis at a proposed initial price of 21.4¢ per Mcf at 15.025 psia with a 2¢ per Mcf periodic escalation every four years. Additionally, Tennessee sought, in Docket No. G–14562, authority to construct and operate the same facilities heretofore requested but denied by the Examiner.

On June 5, 1962, hearing on the applications as amended commenced at which time testimony of witnesses for the producers was presented. Motions to strike testimony and exhibits and other motions related to such testimony and exhibits having been disposed of by the Examiner, the hearing was recessed upon request of all parties for the purpose of exploring the possibility of settlement. On November 8, 1962, the Presiding Examiner certified to us a proposed settlement relating to the price to be paid for the MCN gas, filed on October 29, 1962, along with a petition filed by the producer applicants on the same date requesting the issuance of an order granting permanent certificates of public convenience and necessity in accordance with the amended applications as modified by the settlement proposal.[2] On November 26, 1962, Tennessee, in view of the filing of the settlement proposal, filed a motion requesting omission of the intermediate decision procedure insofar as its application for authorization to construct and operate certain facilities, as proposed in Docket No. G–14562, is concerned.

Under the settlement agreement now before us the producer applicants propose an initial price of 20.625¢ per Mcf at 15.025 psia, including Louisiana State tax reimbursement at 1.625¢ per Mcf, where the gas to be delivered to Tennessee is produced from that portion of the MCN properties which is subject to the taxing jurisdiction of the State of Louisiana. In respect to the gas to be delivered to Tennessee from that portion of the MCN properties where the applicability of Louisiana state taxes is yet uncertain, the initial price would consist of 19.0¢ per Mcf with the escrowing by Tennessee of an additional 1.625¢ per Mcf until such issue with respect to the applicability of the tax, is finally adjudicated. The settlement agreement contains specific provisions for the distribution to Tennessee of amounts held in escrow in the event that the aforementioned portion of the MCN properties is finally adjudicated as being within the federal domain. In this regard, the producer applicants have reserved the right to file for reimbursement of up to 50 percent of any severance tax which the federal government might levy. Finally, the agreement provides for a moratorium on future price changes for the MCN gas until June 30, 1967, except that the settlement prices shall be subject to upward or downward adjustment during the moratorium period according to any specifically applicable area rate or rates ultimately determined in the South Louisiana Area Rate Proceeding, Docket No. AR61–2, *et al.*, prospectively from the date of such determination. We should here point out, however, that although the settlement agreement seeks to antici-

[2] This petition refers also to a settlement proposal submitted directly to the Commission in Docket Nos. G–17649, G–17625, and G–17765, which proceedings were not before the Presiding Examiner in the instant consolidated proceedings. Our order here, therefore, is not dispositive of those applications.

pate in part the nature of our final determinations in Docket No. AR61–2, *et al.*, our definitive interpretation of "specifically applicable area rate or rates" will obviously have to await conclusion of the area proceeding.[3]

In addition to the foregoing, the settlement agreement augments the contract period of less than 48 months within which Tennessee can take gas previously paid for but not taken by extending said period to 48 months from the date any such gas is paid for but not taken.

We find that this proposed settlement is in the public interest and should be approved as hereinafter provided. We deem it particularly important that the settlement achieves a price stability for a reasonable period of time. The proposal is consistent with the area pricing approach to producer regulation and no objections or petitions in opposition having been filed to the settlement agreement or to the producer applicants' petition for the immediate issuance of permanent certificates in their respective docketed applications, we shall issue certificates to each of said producer applicants conditioned upon the terms of the settlement agreement.

The only other matter remaining for consideration is the application of Tennessee in Docket No. G–14562. No party to this proceeding has filed an answer in opposition to Tennessee's motion to omit the intermediate decision in respect to its docketed application. The record also discloses that no party has opposed the issuance of a certificate for the construction and operation of the facilities proposed in Docket No. G–14562, as such. Dismissal of Tennessee's application by the Presiding Examiner in his decision of January 8, 1962, *supra*, stemmed from the opposition of the Commission's staff and interested interveners to the manner in which Tennessee proposed to acquire the MCN gas, i.e., the so-called leasehold acquisition. In view of the premises, we shall grant the motion for omission of the intermediate decision procedure and in conjunction therewith issue a certificate of public convenience and necessity to Tennessee in Docket No. G–14562.

The Commission further finds:

(1) Tennessee Gas Transmission Company is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) Continental Oil Company, Socony Mobil Company and Newmont Oil Company are or upon initiation of the proposed sale to Tennessee will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission and are or will be "natural gas companies" within the meaning of the Natural Gas Act.

(3) The sales of natural gas proposed by the applications, as amended, are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The construction and operation of the facilities proposed by Tennessee and the sales proposed by each of the producer applicants, as amended, and as further modified by the settlement agreement, are required by the public convenience and necessity and certificates should be issued to each of them as hereinafter ordered.

The Commission orders:

(A) The motion for waiver of the intermediate decision procedure filed by Tennessee is hereby granted.

---

[3] For further reflections of the Commission's views in this regard, see our order approving a proposed settlement in Texaco Inc., *et al.*, Docket No. G–13169, *et al.*, issued July 30, 1962, 28 FPC 247.

(B) The settlement agreement filed October 29, 1962, is hereby approved and accepted to be effective as of the date of commencement of deliveries.

(C) Certificates of public convenience and necessity are hereby issued to each of the applicants for the sale of natural gas in interstate commerce for resale as proposed, and for the construction and operation of facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in their respective applications, as amended, and as further modified by the settlement agreement.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that applicants fully comply with the terms of the settlement agreement.

(E) The certificates herein issued are not transferable and shall be effective only so long as each of the applicants continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(F) Within 30 days from the date of issuance of this order, each of the MCN companies shall make such filings under their respective rate schedules as are required to make effective the terms of the settlement agreement.

(G) This order is without prejudice to any findings or orders which have been, or may be, made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by each of the MCN companies, the Commission staff, or any affected party herein, in any proceeding now pending, or hereafter instituted by or against each of the MCN companies, or any other companies, person, or parties affected by this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

ORDER REQUIRING PRESIDING EXAMINER TO RENDER DECISION ON DEFERRED ISSUES

(Issued January 2, 1963)

On November 9, 1962, the Presiding Examiner issued a "Decision on the First Issues" in the above-styled proceedings. The Presiding Examiner restricted his findings in the above decision to issues within one of the following three categories: (1) expansion of gas deliveries as proposed in these proceedings, (2) the adequacy of Tennessee's gas supply to meet such an expansion and (3) related and incidental problems.

The Presiding Examiner deferred for later decision the question relating to whether or not Tennessee Gas Transmission Company (Tennessee) requires all

of the additional capacity it has requested in these proceedings to meet the requirements of its customers. Similarly deferred by the Presiding Examiner was the question pertaining to Tennessee's acquisition of its Ship Shoal reserves. The Ship Shoal reserves consist of gas purchased "in place" by Tennessee from acreage located on federal territory offshore Louisiana.

Tennessee in the exceptions it has filed to the Examiner's "Decision on the First Issues" raises a question concerning the propriety of requiring it to undertake additional obligations without its being fully cognizant of all of the terms that may be attached to the certificate tendered to it for acceptance because of the deferral of important issues by the Presiding Examiner.

Tennessee at page 3 of its exceptions states as follows:

> In essence, the Examiner's Decision would require Tennessee to undertake to meet additional obligations on a long term basis, without first knowing whether the additional system capacity needed to meet such obligations will be authorized. *It is Tennessee's position that it is entitled to know what the terms of the certificate are before accepting such certificate.* * * * [Emphasis added.]

The Commission is of the opinion that there is considerable merit to this issue raised by Tennessee in its exceptions. Tennessee is entitled to know what additional capacity it will be authorized to build into its system before it is required to undertake to meet those additional obligations proposed by the Presiding Examiner in his "Decision on the First Issues."

Tennessee submitted the Ship Shoal reserves in support of its systemwide gas supply. Hence, the importance of these large reserves to the proposed expansion of service by Tennessee is also an integral part of these proceedings. Hence, Tennessee should also have the benefit of knowing what position the Commission will take in connection with this proposal before it is required to undertake the additional obligations proposed by the Presiding Examiner.

The Commission is of the opinion that the issues deferred by the Presiding Examiner are vital and important to the rendering of a decision by it that would require Tennessee to undertake additional service. The Presiding Examiner has already noted the expanded gas requirements of Tennessee's existing and new customers warranted expeditious attention. Hence, the Commission feels that it is necessary to require the Presiding Examiner to expeditiously pass upon those issues he has deferred in order that it may act promptly with respect to all the important issues involved in these proceedings.

The Commission orders:

That the Presiding Examiner be and hereby is required to augment his "Decision on the First Issues" by ruling upon and making findings, as expeditiously as possible, on those issues he has specifically deferred therein.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP61-143; NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP61-149; ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP61-163

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 3, 1963)

On November 7, 1960, as amended on October 4, 1961, November 9, 1961, and October 25, 1962, Colorado Interstate Gas Company (Colorado) filed in Docket

No. CP61–143 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing a short-term field sale of natural gas to Arkansas Louisiana Gas Company (Arkansas Louisiana), all as more fully set forth in the application, as amended, on file with the Commission.

Colorado proposes to sell up to 25,000 Mcf of natural gas per day, through December 31, 1963, to Arkansas Louisiana. Said sale will be effected by an exchange arrangement with Natural Gas Pipeline Company of America (Natural) through existing interconnections of facilities of Colorado and Natural in the Mocane field, Oklahoma. Colorado will deliver gas directly to Natural and the latter will deliver equivalent volumes to Arkansas Louisiana at a proposed new interconnection between Natural and Arkansas Louisiana in Beckham County, Oklahoma.

On November 18, 1960, as amended on October 9, 1961, November 14, 1961, and October 11, 1962, Natural filed in Docket No. CP61–149, and on December 8, 1960, as amended on September 28, 1961, November 6, 1961, and October 1, 1962, Arkansas Louisiana filed in Docket No. CP61–163, applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity authorizing the above-described interconnection and exchange of natural gas.[1]

Colorado states that the proposed sale is to relieve a short-term excess gas supply situation. Said excess gas is the result of a take-or-pay situation caused by the fact that Colorado's Provo project (Docket No. G–16235, *et al.*) is not in operation.

The sales of natural gas to Arkansas Louisiana will be made at a rate of 14.5 cents per Mcf.

The estimated cost of facilities for the interconnection between Natural and Arkansas Louisiana in Grady County, Oklahoma, is $2,800. Natural will construct the necessary facilities and will be reimbursed by Arkansas Louisiana for the cost incurred.

The subject sale of gas to Arkansas Louisiana is to be made pursuant to an agreement, dated October 20, 1960. The subject exchange of natural gas is to be made pursuant to an agreement, dated October 20, 1960, as amended, among Colorado, Arkansas Louisiana, and Natural.

By letters, dated February 16, 1961, each Applicant was granted temporary authorization, limited to the period ending December 31, 1961. By subsequent letters the temporary authorizations were extended through December 31, 1962.

Pursuant to due notice, a public hearing was held in Washington, D.C., on December 20, 1962, respecting the matters involved in and the issues presented by the applications, as amended, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G–294 (4 FPC 936).

[1] The amendments filed October 4, 1961, October 9, 1961, and September 28, 1961, by Colorado, Natural, and Arkansas Louisiana, respectively, propose to change the interconnection and delivery and receipt of natural gas between Natural and Arkansas from the originally proposed point in Beckham County to a point in Grady County, Oklahoma.

(2) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(3) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910.)

(4) The facilities hereinbefore described, as more fully described in the application in Docket No. CP61–149, are to be used in the exchange and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Natural are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The subject sale of natural gas by Colorado to Arkansas Louisiana and the subject exchange and delivery of natural gas among Colorado, Natural, and Arkansas Louisiana, hereinbefore described, as more fully described in the applications, as amended, in Docket Nos. CP61–143, CP61–149 and CP61–163, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such proposed sale, exchange and delivery are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) The construction and operation of the subject facilities by Natural, the subject sale of natural gas by Colorado to Arkansas Louisiana and the subject exchange and delivery of natural gas among Colorado, Natural and Arkansas Louisiana are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(8) The certificates hereinafter issued to Applicants should be without prejudice to the final determination of Arkansas Louisiana's application in Docket No. CP62–83.

(9) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(10) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Colorado Interstate Gas Company to sell up to 25,000 Mcf of natural gas per day to Arkansas Louisiana; authorizing Natural Gas Pipeline Company of America to construct and operate its subject facilities, and authorizing Arkansas Louisiana Gas Company, Colorado Interstate and Natural to exchange natural gas as set forth in the agreement, dated October 20, 1960, as amended, among the three Applicants, all as hereinbefore described and as more fully described in the applications, as amended, herein, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above are limited in duration to a period extending through December 31, 1963.

(C) The certificates issued by paragraph (A) above shall be without prejudice to the final determination of Arkansas Louisiana's application in Docket No. CP62–83.

(D) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

SLADE, INC. (OPERATOR), DOCKET NOS. G–19986 AND RI61–10; SLADE, INC., DOCKET NO. RI60–147; SLADE, INC. (OPERATOR), ET AL., DOCKET NO. RI60–179; AREA RATE PROCEEDING, DOCKET NO. AR61–1

OPINION AND ORDER PROVIDING FOR CONSOLIDATION OF PROCEEDINGS IN APPROPRIATE AREA RATE PROCEEDINGS

(Issued January 3, 1963)*

Syllabus

1. Citing Opinion No. 369, [McCommons filing], Commission *finds* reasonableness of proposed rates cannot be determined on present record showing only company-wide costs of one venturer with no costs of joint ventures as such. P. 13.
2. In determining reasonableness of plant sales rate, it is not proper to employ average unit cost of one venturer's gas production in various joint ventures, when only two such ventures are involved in plant sales. P. 13.
3. Although reaffirming policy to decide cases pending prior to area rate proceeding on cost of service basis, Commission *concludes* that under special circumstances here such determination should be made in area rate proceedings. P. 14.
4. Commission *consolidates* proceedings with appropriate area rate proceedings for determination of reasonableness of proposed increased rates suspended under Section 4(e) of The Natural Gas Act. P. 14.

William J. Grove and *Carroll L. Gilliam* for Slade, Inc.

J. Harry Mulhern, Edward S. Kirby, John F. McDonald and *William R. Duff* for Public Service Electric and Gas Company.

Julius C. Meier for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

O'CONNOR, *Commissioner:* These consolidated proceedings involve proposed increased rates which were tendered for filing by Slade, Inc. (Slade), suspended, and set for hearing. The hearing having been concluded and a proposed decision issued, the proceedings are pending before us on exceptions to the decision of the Presiding Examiner issued November 1, 1961. The Examiner found that Slade's average jurisdictional unit cost of service applicable to wellhead sales, based on a 1958 test period, is 17.7443¢ per Mcf, and that its jurisdictional unit cost of

---

*Designated Commission Opinion No. 376. Initial decision appears on p. 15. Reconsideration denied by order issued February 27, 1963, FPC 408. Petition for Review dismissed on July 11, 1963, in *Slade, Inc.* v. *F.P.C.* (CA5 No. 20497).

service applicable to gas compressed and sold at Slade's Sinton Dome plant is 17.4154¢ per Mcf. Because the unit costs thus determined were in excess of Slade's proposed rates, the Examiner proposed that all of the proceedings herein be terminated and that Slade be discharged of its obligation to refund any excess charges with respect to the proceeding in Docket No. G–19986 in which Slade's increased rate had been made effective subject to refund.

Slade is a Delaware Corporation with offices at Orange, Texas, which performs geological and engineering services, explores for and produces oil and gas, and operates gathering lines and a compressor plant in the Sinton Dome area, San Patricio County, Texas. Slade's production operations involve various joint ventures in connection with which it acts both as operator, on behalf of the joint venturers, and in addition as a joint venturer with a total working interest of less than 10%. Four rate increases are involved here as follows:

(1) Docket No. G–19986 involves suspension on October 30, 1959, of Supplement No. 4 to Slade's FPC Gas Rate Schedule No. 5 representing an increase from 12.12268 cents to 15.0952 cents per Mcf for gas sold to Tennessee Gas Transmission Company from the Sinton Dome compressor plant (Texas Railroad District No. 4). The compressor plant is owned by Slade and the gas sold therefrom comes in part from wells in which Slade is a joint venturer with other parties and in part from purchased gas. The increased rate went into effect subject to refund on August 3, 1960.

(2) Docket No. RI61–10 involves suspension on July 28, 1960, of Supplement No. 5 to Slade's FPC Gas Rate Schedule No. 5, representing an increase to 17.24347 cents per Mcf for the same sale.

(3) Docket No. RI60–147 involves suspension on February 18, 1960, of Supplement No. 5 to Slade's FPC Gas Rate Schedule No. 4, representing an increase from 11 cents to 17 cents per Mcf for wellhead sales of gas by joint ventures of which Slade is operator and in which it owns 12.5% and 6.25% working interests, respectively, from the Spraberry Trend area, Glasscock and Reagan Counties, Texas (Texas Railroad District No. 7–C).

(4) Docket No. RI60–179 involves suspension on March 9, 1960, of Supplement No. 4 to Slade's FPC Gas Rate Schedule No. 6, representing an increase from 10 cents to 17.2294 cents per Mcf for wellhead sales of gas by a joint venture, different from the joint ventures involved in Rate Schedule No. 4, of which Slade is operator and in which it owns a 6.25% interest, from the Spraberry Trend area, Reagan County, Texas (Texas Railroad District No. 7–C).

With respect to the last three dockets Slade did not file a motion pursuant to Section 4(e) of the Act to place its proposed rates into effect, and it is still collecting the prior rates.

At the hearing Slade presented a company-wide cost of service for the test year 1958 deriving separate costs for (1) its oil and gas operations and (2) the compressor plant. Staff did not present any evidence at the hearing.

Slade's production operations consist of a series of joint ventures in connection with which Slade acts both as operator of the joint venture properties, and as a joint venturer with a varying percentage of interest ownership in each joint venture.[1] Moreover, the participants in the various joint ventures are not the same for each joint venture and the percentage of interest ownership of each participant varies from one joint venture to another. Slade, as operator of the properties involved herein, has filed rate schedules covering all working interests in such properties. Thus, all of the participants in each of the joint ventures are covered by Slade's rate filings.

[1] In addition to the interests of Slade mentioned above under Rate Schedule Nos. 4, 5, and 6, Slade as a joint venturer also owns interests of 12.5%, 6.25%, and 9.375% in gas sold pursuant to its Rate Schedule Nos. 1, 2, and 3, respectively.

In the instant case Slade has not purported to justify the increased prices for the two wellhead sales by any determination of the cost of the particular joint ventures engaged in making these sales. Instead it has presented a company-wide cost of service relating merely to its own net working interest in gas production arising out of the various joint ventures in which it participates, including but not limited to those involved here. In our recent Opinion No. 369, 28 FPC 897, we made clear with respect to the *McCommons filing* (William E. McCommons d/b/a McCommons Exploration Company, *et al.*, Docket No. RI62–476) the difficulties in attempting to make any cost evaluation on the basis of the composite cost of a limited number of joint ventures with or without differing ownership interests. But even assuming a proper determination of just and reasonable rates could be made on any such basis we think it clear that the costs utilized must be those of the joint ventures as such, (as McCommon's at least attempted to do), and not just the company-wide costs of one of the joint venturers, particularly one having only a minor interest in the ventures. Otherwise the justness and reasonableness of a rate will depend solely upon the success or lack of success in the overall gas production operations of the particular venturer chancing to be the operator, rather than upon any basis rationally related to the production entity as a whole.[2] In short, the reasonableness of the rates proposed by Slade under its FPC Gas Schedule Nos. 4 and 6 cannot be determined on the basis of the present record which purports only to show the company-wide costs of a venturer, Slade, owning minor interests in the production ventures there in issue.

Similarly, we cannot determine the justness and reasonableness of the rate for Slade's plant sales under its FPC Gas Rate Schedule No. 5 because Slade's plant cost of service includes costs for gas produced by certain joint ventures in which Slade has an interest and is the operator, calculated on the basis of Slade's company-wide production costs in all of the separate joint ventures in which it participates. As indicated above, it is not proper to employ the average unit cost for all of Slade's gas production in various joint ventures, when only two such ventures are involved in gas sold from the plant. In addition, the record is unclear as to whether Slade's company-wide unit production costs were applied to *all* of the gas processed by the Sinton Dome plant coming from the two production ventures in which Slade had an interest, or only from *Slade's share* of this gas, or, in the latter event, the manner, if any, in which the gas costs of that part of the gas from these two ventures attributable to the other venturers, were included in the calculated gas costs.

Because the present record does not permit a proper determination of the justness and reasonableness of the rates involved herein, we are faced with the problem of deciding whether to remand the proceedings to the Examiner for the taking of additional evidence or to determine the lawful rates in connection with area rate hearings. As we mentioned in Opinion No. 365, the *Hunt* case,[3] it is

[2] It is recognized that this question of working interests permeates the gas production business and that many of the largest producers as well as the smaller ones will have only fractional interests in joint ventures involving a number of leases. But in the usual producer case coming before us, the deviations from the cost norm in those situations where the producer whose "rates" are in issue is an operator with only a minor interest, other than a sole proprietor, can be expected to even out over all of the producer's interests. This is clearly not the case with a very small operator like Slade. If its company-wide costs were allowed to fix the rate of the joint ventures for which it serves as operator we would be encouraging a situation in which it would be to the interests of joint venturers to choose as their "operator" the member of the group with highest individual costs.

[3] Opinion No. 365 issued October 17, 1962, in *Hunt Oil Company, et al.*, Docket No. G–9065, *et al.*, 28 FPC 623.

our policy to decide cases, such as the instant case,[4] which were pending before the Commission prior to the commencement of area rate proceedings on the basis of cost of service evidence. We reaffirm that policy, but for the reasons set forth below conclude that under the special circumstances of this case it would be more appropriate to make these determinations in connection with area rate proceedings.

The two Slade rate schedules involving wellhead sales relate to sales from Texas Railroad District No. 7–C. An area rate hearing is currently progressing with respect to sales in the Permian Basin area, which includes Texas Railroad District No. 7–C, and Slade is already a party to the Section 5(a) aspects of this proceeding. Accordingly, Slade's future rates for these sales will be determined in this proceeding. There would seem to be little purpose to providing for further hearings on the Section 4 aspects of these sales when the area hearing is in its final stages. We note, moreover, that Slade's own accounting witness stated his opinion that cost of service of a producer as small as Slade should not be used to determine what is a just and reasonable price for the gas. We shall therefore consolidate these dockets with the Permian Basin proceeding.

With respect to Slade's remaining rate schedule involved here, covering the Sinton Dome plant sales, there is also sound justification for providing that any rate determination with respect thereto be made in an area rate proceeding. The whole purpose of the plant is to provide compression service both for its own produced gas and gas purchased by Slade from other producers in the area. Slade is thus interested solely in shallow low pressure production in need of compression. The shallow zones in the Sinton Dome area are generally thin, lenticular, and extremely faulted. It is, therefore, impossible to predict the economic life of the plant because of inherent difficulties in calculating proven reserves of the type necessary for Slade's operations.[5] We think it clear, under such circumstances, that no meaningful determination of a just and reasonable price for the gas sold from the compressor plant can be made on a cost of service basis since neither the test year used nor any other test period can be expected to be typical.[6] Instead, we are convinced that the determination of the just and reasonable price must await an area hearing covering Railroad District No. 4, where the Sinton Dome plant (and the wells producing gas processed at the plant) are located.

The Commission orders:

For the reasons heretofore stated, the proceedings in Docket Nos. RI60–147 and RI60–179 are hereby consolidated with the Permian Basin area rate proceeding in Docket No. AR61–1, and the proceedings in Docket Nos. G–19986 and RI61–10 will be consolidated with an appropriate area rate proceeding.

---

[4] These consolidated proceedings were set down for hearing prior to the *Phillips* decision in Opinion No. 338, 24 FPC 537, and hearings were held shortly after the issuance of that decision.

[5] Thus, although the plant operated at approximately 77 percent of capacity in the test period, Slade's witness testified at the hearing in 1960 that the plant was then operating at 46 percent of capacity and that based upon his projections for the entire year 1960 the plant would be operated at only 35 percent of capacity.

[6] We note in passing that the examiner in accordance with our discussion in *Phillips* included in the cost of gas processed at the Sinton Dome plant the full price payable to other producers during the test period based on Slade's proposed resale rate of 17.24347¢ per Mcf pursuant to the percentage purchase contracts they had with Slade despite the lack of any showing of such producers' costs. Whatever the validity of such a determination in the case of *Phillips*, or any other determination made on a cost of service basis we think it clear that with a small processor like Slade where a very high percent of its total costs are payments to producers calculated on such a percentage of sale basis, it makes little, if any, sense to fix the price of the sales from the plant on such a "cost" basis, and that the area price concept provides the only rational basis for fixing a just and reasonable price for such sales.

DECISION

UPON A CONSOLIDATED PROCEEDING UNDER SECTION 4(e) OF THE NATURAL GAS ACT TO DETERMINE JUST AND REASONABLE RATES FOR AN INDEPENDENT PRODUCER

(Issued November 1, 1961)

ZWERDLING, *Presiding Examiner:* This consolidated proceeding involves a review under Sec. 4(e) of the Natural Gas Act concerning the lawfulness of four rate increases relating to the sale of gas by Slade, Inc. (Slade), as follows:

1) Docket No. G–19986 involves suspension on October 30, 1959, of Supp. No. 4 to Slade's FPC Gas Rate Schedule No. 5, representing an increase from 12.12268¢ to 15.0952¢ per Mcf for gas sold by Slade from its Sinton Dome compressor plant in San Patricio County, Texas, to Tennessee Gas Transmission Company (Tennessee). The increased rates went into effect, subject to refund, as of August 3, 1960.

2) Docket No. RI61–10 involves suspension on July 28, 1960, of Supp. No. 5 to Slade's FPC Gas Rate Schedule No. 5, representing an increase to 17.2437¢ per Mcf for the same sale.

3) Docket No. RI60–147 involves suspension on February 18, 1960, of Supp. No. 5 to Slade's FPC Gas Rate Schedule No. 4, representing an increase from 11¢ to 17¢ per Mcf for a wellhead sale of gas by Slade from the Spraberry Trend area, Glasscock and Reagan Counties, Texas.

4) Docket No. RI60–179 involves suspension on March 9, 1960, of Supp. No. 4 to Slade's FPC Gas Rate Schedule No. 6, representing an increase from 10¢ to 17.2294¢ per Mcf for another wellhead sale from the Spraberry Trend area, Reagan County, Texas.

With respect to the last three dockets listed above, Slade did not file a motion to put its proposed increased rates into effect, and it is still collecting the rates which were in effect prior to the instant rate increase filings.

By order dated September 6, 1960, the Commission consolidated the proceedings, and set the matter for hearing on October 11, 1960. The hearing commenced on that date and was concluded on October 26, 1960.

Slade is a small producer, whose oil and gas operations consist of: (1) performance of geological and engineering services; (2) exploration for, and production and sale of oil and natural gas; and (3) operation of gathering lines and a compressor plant in the Sinton Dome area, San Patricio County, Texas. Slade's entire production operations involve joint venture properties in connection with which it acts both as operator, on behalf of the joint venturers, and in addition as a joint venturer to the extent of a working interest representing something less than 10 percent.

In 1958, the test year used in this proceeding, Slade's working interest production was 21,000 barrels of liquids, and 244,000 Mcf of natural gas, of which 114,000 Mcf were sold at the wellhead and 130,000 Mcf were gathered into the Sinton Dome plant. 1,728,000 Mcf of natural gas were compressed and sold from the Sinton Dome plant in 1958, of which 1,231,537 Mcf were delivered to Tennessee under the contract involved in the instant Docket Nos. G–19986 and RI 61–10. The total volumes sold by the plant were supplied by the 130,000 Mcf of Slade's own production, plus 1,598,000 Mcf of gas purchased from other producers.

The instant proceedings involve most of the volumes now sold by Slade in interstate commerce for resale.

During the instant hearing, Slade presented a company-wide cost of service for the test year 1958 (Exh. 1), deriving separate costs for (1) its oil and gas operations (production), and (2) the compressor plant. In order to eliminate

controversy, it limited its rate of return to 9%, and limited its federal income tax allowance to actual tax liability. Slade found a total cost of service in the amount of $141,808 for oil and gas operations, and $389,361 for compressor plant operations. This produced, under its preferred and recommended method, a unit cost of 38.3578¢ per Mcf for Slade's own produced gas (relating to Docket Nos. RI60–147 and RI60–179), and 18.9662¢ per Mcf for gas compressed and sold (relating to Docket Nos. G–19986 and RI61–10). In calculating cost for the gas compressed and sold, the 130,000 Mcf of gas brought into the plant from Slade's own production was charged to the plant at Slade's own determined unit cost for its wellhead production.

Neither the Staff nor the intervenor, Public Service Electric and Gas Company, presented any evidence of their own in the instant proceeding. However, in Appendix A to its brief the Staff set forth a cost of service, using Slade's figures but applying different methods. Staff thus derived a unit cost of 19.0717¢ per Mcf for Slade's wellhead gas production and 13.6943¢ per Mcf for plant gas compressed and sold. In spite of the fact that it thus derived a higher unit cost for Slade's wellhead gas production than the rates herein proposed, Staff nevertheless recommends that all of the increased rates proposed in this proceeding should be disallowed—for reasons which will be noted at a later point.

At the conclusion of the hearing the Staff and Slade entered into a stipulation on the record (3: 225–228), setting forth their areas of disagreement with respect to Slade's cost of service. The effect of this stipulation was to limit the controverted cost of service questions to a small number of issues, which will be discussed below.

In addition to its cost of service presentation, Slade also relies upon certain other contentions. It particularly stresses that the operations of its Sinton Dome compressor plant depend upon its ability to purchase gas from field producers in the area; that such purchases are made under "percentage of proceeds" contracts, under which the price paid by Slade to the producer is based upon a percentage of Slade's resale price to Tennessee; that unless its proposed rate of 17.24347¢ per Mcf for such compressor plant sales under Docket No. RI61–10 is approved herein, it will not be able to acquire and develop acreage in the area or to satisfy its requirements for gas for the compressor plant by purchases from field producers.

It is concluded, however, that such arguments are not of controlling significance in this case, and that the case should be disposed of on the basis of Slade's jurisdictional cost of service, as here determined. The controverted cost of service issues, as set forth in the stipulation between the Staff and Slade, will now be considered.

Provision for Unrecoverable Joint Venture Costs

As noted above, all of Slade's production operations involve joint venture properties, in connection with which it acts both as operator, on behalf of the joint ventures, and in addition as a joint venturer to the extent of a working interest representing something less than 10 percent.

Slade includes as a cost in its cost-of-service (Exhibit 1, Schedule B) an item of $10,858 as a provision for "doubtful recoverables (unrecoverable joint venture costs)." The Staff excludes $10,000 of this item as not constituting a proper cost to be charged to the rate payer. This latter amount represents the unrecoverable portion of the total expenditures incurred by Slade in its activity as operator and actual developer of the producing properties, for an in behalf of the joint venturers. As operator, Slade thus expended funds which should have

been totally reimbursed by the respective joint venturers. Since reimbursement to this extent was not made, and on the theory that these partial defaults are unrecoverable, Slade contends that this amount is properly included in its cost of service. It alleges that such costs are a normal incident of ordinary and necessary expenditures for any company taking the lead in exploratory and developmental activity, and that without such operators and assumption of such risks on their part, there could be no joint ventures in exploration and development. For these reasons Slade contends that this item is a normal, necessary incident to its gas producing operations.

The Staff, on the other hand, contends that this is not a proper cost of service item; that Slade should instead attempt to collect this amount from the delinquent members of the joint venture and not from the rate payers.

It is concluded that the Staff's position with respect to this item is sound, and that $10,000 of the $10,858 item for "unrecoverable joint venture costs" should be excluded from Slade's cost-of-service. In the instant Section 4(e) proceeding just and reasonable rates are being fixed only for the gas produced by Slade which represents its own working interest in the joint venture. The expenditures made by Slade as operator, on behalf of the other joint venturers, cannot be regarded as having any relationship to the cost of the gas which Slade itself is selling. Accordingly, such amounts cannot properly be collected from the rate payer in the instant proceeding, and an appropriate adjustment has been made on Appendix Table A to this decision.

Allocation of General and Administrative Costs

For the year 1958, Slade shows General and Administrative expenses totalling $141,694, less an amount of $60,300 indicated as "Charges to joint operations" or a net of $81,394 for the General and Administrative expense account. Sched. B of Exh. 1 further shows the allocation by Slade of the $81,394 as follows:

$11,070 to Geological and Engineering Services:
$10,858 to Oil and Gas Operations—representing the provision for "unrecoverable joint venture costs," discussed above;
$59,466 to Compressor Plant.

The issue here is whether Slade properly assigned the entire $59,466 item to Compressor Plant, or whether that amount should be allocated between the two functions of (a) compressor plant, and (b) oil and gas operations. Staff takes the position that the $59,466 represents indirect costs in the General and Administrative account which were not directly assignable to either of these two functions; that such costs accordingly must be allocated between both functions, and it made this allocation on the basis of the direct expenses (excluding purchased gas) recorded as applicable to oil and gas operations and compressor plant. This resulted in an allocation of $25,884 of this item to oil and gas operations, and $33,506 to compressor plant.

Slade, on the other hand, points out that it has directly assigned to the respective working interest owners the $60,300 General and Administrative Expense item, which represents General and Administrative Expenses incurred in operation of the jointly owned properties—the latter constituting the entire "oil and gas operations." Slade also notes that out of this $60,300 item it has charged to its own "oil and gas operations" that portion chargeable to its own working interest ownership, amounting to $10,070.[1] It contends that

[1] See Exh. 1, Sched. B—"Production expenses (including $10,070 Company's share of joint venture general and administrative)."

no other portion of General and Administrative Expenses is related to the "oil and gas operations;" that its own assignment is consistent with the incurrence of liabilities for operator's general and administrative costs under existing agreements between the owners and the operator of producing properties. This position appears to be borne out by the testimony of Slade witness Field, as follows:

> The general and administrative category includes a credit of $60,300 representing charges to joint ventures for administrative costs of Slade, the operator, in accordance with the operating agreements. The major part of the $60,300 charge to joint ventures for general and administrative costs is absorbed by other working interests. Slade's working interest portion of this $60,300 is included in production expenses within the category "Oil and Gas Operations," as indicated parenthetically therein. In 1958 Slade's portion of its general and administrative costs was $10,070. (1: 21–22)

Under the circumstances, it is concluded that the Staff's allocation of a portion of the $59,466 item to oil and gas operations represents a "double charge" to that function, and is not supported by the instant record. The Staff position must accordingly be rejected.

Computation of Federal Income Taxes

Slade derived a total federal income tax component for its cost of service in the net amount of $4,600, comprised of a credit of $6,200 for oil and gas operations and $10,800 as a debit to the compressor plant. Staff, on the other hand, found a total tax liability of $15,812, which was allocated to oil and gas operations in the amount of $8,276 and to compressor plant in the amount of $7,536.

The Staff thus found a greater amount of net tax liability for the entire company by $11,212, this increase being due primarily to the use of a lesser amount of tax deductions than reflected by Slade. In determining the company's excess of tax allowable depletion over book depletion, Staff calculated the depletion deductions on the basis of the company's actual 1958 price levels, as reflected in its 1958 tax return. Slade, on the other hand, calculated the depletion deductions on the basis of its claimed cost of service and revenue requirements for the test year 1958.

In computing the income tax allowance in rate proceedings in general, it is customary to determine tax liability not upon the basis of actual taxable income collected in the test year, but rather on the basis of the tax liability which would result from the return allowance approved in the determined cost of service. Similar considerations require that calculation of the depletion deductions in the instant case should be based not upon Slade's actual 1958 price levels, but rather upon the jurisdictional cost of service approved in the instant proceeding.

Although Staff, as noted above, arrived at a greater company-wide net tax liability than that computed by Slade, the Staff derived a lower tax allowance for the compressor plant sales than that determined under the Slade approach. This disparity represents the chief issue in connection with the federal income tax computation. It results from the fact that the Staff's calculation of tax liability was determined by use of the tax formula for the company *as a whole*. The total tax thus derived was then allocated to the separate functions or departments of (a) oil and gas operations, and (b) compressor plant, on the basis of the relative amounts of return derived from the rate base determined for each separate function.

Slade, on the other hand, computed the tax liability separately for each of the two functions, for the reason that the statutory depletion allowance and the intangible drilling cost allowance arise solely out of the oil and gas operations, and are not related to the compressor plant operations. Accordingly, in making the separate tax computation for the compressor plant operation Slade reflected no tax deductions whatsoever for statutory depletion or intangible drilling costs. The Staff attacks this method on the ground that Slade files a tax return and pays its taxes as a corporate entity, rather than by separate departments. Staff contends that if there are special benefits which accrue to oil and gas producing property, they should not be reflected in the tax calculation in a manner which will create a negative tax liability for the oil and gas operations; that the special benefits apply to the company as a whole and should be distributed in an equitable manner to the two departments.

In resolving this problem, it is noted that no contention is made here that the Slade approach has the effect of granting to the company as a whole a higher total tax allowance than its actual total company liability. The question is merely as to how the allowances should be divided up between the two functions or departments.

It is further noted that both Slade and the Staff in this proceeding have computed a separate and distinct cost of service for each of the two functions of oil and gas operations, and compressor plant—assigning to each function its own cost. Under the circumstances, it would seem appropriate that the federal income tax allowance for each function should be derived in the same manner, on the basis of each function's separate taxable income and the tax deductions applicable to each—thus eliminating from the tax deductions for the compressor plant the statutory tax allowances which arise only out of the oil and gas operations.

It is relevant to note, in this connection, that although the Staff determined an over-all company liability for federal income taxes, it then allocated this total amount between the two functions on the basis of the relative dollars of return derived from each function's own rate base. If it is appropriate to make such an allocation on the basis of each function's contribution to the overall return, it is difficult to see why the determination of the tax allowance for each function should not be made in the first instance on the basis of each function's separate contribution to the tax deductions.

Accordingly, it is concluded that federal income tax liability should be computed separately for each of the two functions of oil and gas operations, and compressor plant, following the Slade approach. Since, as indicated above, the depletion deduction applicable to the oil and gas operations is here being calculated on the basis of the cost of service herein approved for that function, this being a lower figure than the cost of service claimed by Slade, a recomputation of the income tax component related to the oil and gas operations becomes necessary. This recomputation is set forth in Appendix Table A to this decision.

Allocation of Joint Exploration and Production Costs Between Gas and Oil

Slade takes the position that both exploration costs and joint production costs should be allocated between gas and oil under the straight Btu method, for reasons which have already been exhaustively considered by the Commission in the *Phillips* case (Op. No. 338), 24 FPC 537.

With respect to the allocation of exploration costs, this problem was resolved by the Commission in the *Phillips* decision, with its rejection of the straight Btu method and its adoption of the modified Btu method, using an economic adjustment factor of four. Nothing has been shown in the record of the instant

THE ARMY LIBRARY
Washington, D.C.

case which justifies a departure here from that Commission position, and it is accordingly concluded that exploration costs should be allocated under the *Phillips* modified Btu method, with the adjustment factor of four.

With respect to joint production costs, the instant record does not contain the required data for application of the relative cost allocation method approved by the Commission in *Phillips*. Slade contends that, as a small company with production only from a few isolated locations, its operations were such as not to provide an adequate basis for the useful application of the relative cost method. Accordingly, it allocated joint production costs under the straight Btu method. The Staff, on the other hand, because of the unavailability of the relative cost method, allocated joint production costs under the sales realization method, allocating 27% of such joint costs to gas.

It is concluded here that the holding by the Commission in *Phillips* rejecting both the sales realization method and the straight Btu method as a basis for allocating exploration costs, and the reasons cited by the Commission in support of that position, are equally controlling with respect to the problem of allocating joint production costs. It is further concluded that although the relative cost method should be used where possible for the allocation of joint production costs, since that method is not available in the instant proceeding the *Phillips* modified Btu method with an adjustment factor of four presents the more acceptable alternative—for the same reasons which led the Commission to approve that method in *Phillips* for the allocation of exploration costs.

The allocation of the modified "total cost of oil and gas production" under the *Phillips* modified Btu method is shown on Appendix Table B herein. The ultimate result, as there shown, is to produce a final jurisdictional unit cost of 17.7443¢ per Mcf applicable to Slade's wellhead sales of gas produced and sold, based on the 1958 test year.

Purchased Gas Cost Adjustment

In computing its cost of purchased gas for the compressor plant, Slade included a purchased gas cost adjustment of $48,850, on the theory that such additional amounts were payable to its producer-suppliers as a result of its proposed Sec. 4(e) rate increase for gas compressed and sold from its compressor plant. Under the terms of Slade's gas purchase contracts with its suppliers (Exh. 5, par. 9), the required payments were based upon varying percentages of the proceeds from Slade's resale at the tailgate of the Sinton Dome plant, depending upon the pressures at which the suppliers' gas was delivered to the plant.

In computing the purchased gas cost adjustment, Slade used the average settlement ratio for the test year 1958, based upon the average ratio for that year of gas purchase cost to resale price—amounting to 55.8%. It applied this 1958 average ratio of 55.8% to the 1958 volumes of sale from the compressor plant, priced at its proposed Sec. 4(e) rate of 17.24347¢ per Mcf for such sales.

It seems clear that Slade must be allowed a purchased gas cost adjustment in the instant proceeding, on the basis of the position taken by the Commission in the *Phillips* case with respect to similar percentage-type gas purchase contracts. The Commission there held (Op. 338, 24 FPC 537; 552) that the increase which it was approving in Phillips' rates would automatically result in an increase in the purchase price payable by Phillips to its suppliers under such contracts, and that Phillips' purchased gas cost must therefore be adjusted accordingly.

The only real issue here is as to the manner in which Slade's purchased gas cost adjustment should be computed. Staff contends that the settlement ratio employed in this computation should be lower than that used by Slade; that it

in fact should be in the order of only 30%, on the basis of certain testimony by Slade witness Gautreaux. Par. 9 of the gas purchase contracts (Exh. 5) provides for a settlement ratio of 60% of the Slade resale price where the incoming pressure of the gas coming into the Sinton plant is from 300 lbs. to 850 lbs., requiring only one compression stage. Where the pressure is from 150 to 300 lbs., requiring two compression stages, the settlement ratio is 40%; and for pressure of 150 lbs. and under, requiring three compression stages, the settlement ratio is 25%. Slade witness Gautreaux, during cross-examination by Staff at a hearing session in October, 1960, stated that the company has gas entering the Sinton plant at each of these three stages of compression (2:128). When asked to state the maximum pressure at which the plant *presently*, received gas from any of its suppliers, he replied:

> Well, the best pressures we are getting are third stage gas presently, 300 or just slightly over 300.
>
> * * * * * * *
>
> Q. Does the great bulk of your gas go through two stages of compression?
>
> A. Presently the great bulk of our gas goes through three stages of compression, sir. (2:132)

The Staff's position that the settlement ratio used in the purchased gas cost adjustment should be in the order of 30% is based upon the fact that the gas purchase contracts provide for a settlement ratio of only 25% where the incoming gas is at pressures of 150 lbs. and under, requiring three compression stages.

Unfortunately, the testimony quoted above leaves it unclear as to whether the low pressures testified to by Gautreaux at this point represented merely a temporary situation prevailing at the time of his testimony in October, 1960, or whether they were instead characteristic of the purchased gas currently being received and to be received in the future by the Sinton plant as a regular matter—thus representing a settled departure from the situation which prevailed during the test year 1958. In this unsatisfactory state of the record it is concluded that the purchased gas cost adjustment should here be computed on the basis of the average settlement ratio which prevailed during the 1958 test year—55.8%.

It is further concluded that in computing this adjustment the settlement ratio of 55.8% should be applied to whatever rate may herein be approved for gas compressed and sold from the Sinton plant.

Even after the modifications made in Slade's claimed cost-of-service, as outlined above, there results a unit cost of gas compressed and sold which is somewhat higher than Slade's requested contract price of 17.24347¢ per Mcf for such sales. Under these circumstances it is concluded that Slade's purchased gas cost adjustment in the amount of $48,850, based upon its proposed rate of 17.24347¢ (Exh. 1, Sched. B–1) is adequately supported and should be approved. The ultimate result, as shown on Appendix Table B herein, is to produce a jurisdictional unit cost applicable to gas compressed and sold at Slade's Sinton Dome plant in the amount of 17.4154¢ per Mcf.

Staff's Other Factors To Be Considered

At pages 18–19 of its brief Staff contends, in a summary fashion, that the 1958 revenues shown by Slade on its Exh. 1, Sched. B, for gas compressed and sold, were understated by $7,343; and that the 1958 revenues shown for gas compressed for others and returned to them (being non-jurisdictional revenues) were understated by $9,458.

No such questions with relation to a claimed understatement of revenues were included in the "areas of disagreement" which were the subject of the stipula-

tion entered upon the record by the Staff and Slade at the close of the instant hearing. In addition, the discussion of these revenue figures is handled in an obscure and unsatisfactory fashion in the briefs filed by the parties. For these reasons, and because of the relatively minor nature of the problem and its impact (dollar-wise), it is concluded that the revenue question does not warrant serious consideration here.

Questions Raised With Respect to Possible Impact of the Commission's Statement of General Policy No. 61–1

At the conclusion of the hearing the Presiding Examiner raised certain questions relating to the possible bearing of the Commission's Statement of General Policy No. 61–1, [24 FPC 818], and the area price levels fixed therein, upon the determination of jurisdictional rates in the instant proceeding. These questions were raised because all of the increased rates proposed by Slade in the instant Sec. 4(e) proceeding are in excess of the area price levels for increased rates, as set forth in the Statement of General Policy for the areas here involved.

Upon further consideration, it is concluded that the Statement of General Policy does not affect the issues to be decided in this proceeding. It is noted, in this connection, that the Commission on page 819 of the Statement declared that the area price levels therein set forth were merely "for the purpose of guidance and initial action by the Commission and their use will not deprive any party of substantive rights or fix the ultimate justness and reasonableness of any rate level." It is further noted that the Commission has not since that time taken any action to suspend pending individual producer rate hearings, to await determination of their jurisdictional rates in area rate proceedings. Under the circumstances, it is concluded that the Commission contemplates that individual producer Sec. 4 rate hearings which are tried and decided prior to the completion of an applicable area rate proceeding will be resolved on the basis of the individual producer's cost of service, and without reference to the Statement of General Policy or the area price levels set forth therein.

Staff Contention That Slade's Proposed Rate Increases Should Be Rejected Without Regard to Its Determined Cost of Service

At the conclusion of the Staff brief (pp. 20–23) a contention is made that Slade is "an inefficient and high cost producer;" and it is suggested that it is not in the public interest "to encourage the development of such unpredictable and marginal producing properties." The implication is that the rate increases herein proposed should be rejected out of hand, without reference to the jurisdictional cost of service here determined for Slade.

The record evidence, however, does not support a finding that Slade is an "inefficient" producer, or that the development of the producing properties involved in this proceeding is contrary to the public interest.

In addition, in the instant individual producer rate proceeding, unlike the situation which might develop in an area rate proceeding, there is no evidence from which a determination could be made as to average or comparative costs for all producers in the Slade area, producing and selling gas of similar quality and under similar conditions. Under the circumstances, it is concluded that the question whether Slade's proposed rates in the instant proceeding are "just and reasonable" must be resolved by reference to its own cost of service as herein determined.

As already noted it is here concluded, based on the resolution of the controverted issues as outlined above, that Slade's jurisdictional unit cost of service applicable to wellhead sales of gas produced and sold, based on the 1958 test year, is 17.7443¢ per Mcf; and that its jurisdictional cost of service applicable to gas compressed and sold at its Sinton Dome plant is 17,4154¢ per Mcf.

Under the circumstances, Slade's proposed rate increases in the instant Docket Nos. G–19986, RI61–10, RI60–147, and RI60–179 are found just and reasonable, and the Sec. 4(e) proceedings in such dockets should accordingly be terminated.

Findings and Conclusions

Upon full consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Presiding Examiner finds and concludes in addition to the findings and conclusions above set out, that:

(1) Slade, Inc. is a natural-gas company subject to the provisions of the Natural Gas Act.

(2) The sales of natural gas for resale which are the subject of this order are sales of natural gas in interstate commerce and are subject to the jurisdiction of this Commission.

(3) The jurisdictional unit cost of service determined for Slade's wellhead sales of gas produced and sold, based on the 1958 test year, is 17.7443¢ per Mcf. The jurisdictional unit cost of service determined for gas compressed and sold at Slade's Sinton Dome plant is 17.4154¢ per Mcf.

(4) Such costs were in excess of Slade's proposed increased rates in the instant consolidated dockets.

(5) It is necessary and appropriate under the circumstances, and good cause exists, that the proceedings in the instant consolidated dockets should be terminated; and that Slade's obligation to refund excess charges with respect to any of such proceedings should be discharged.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) The proceedings in Docket Nos. G–19986, RI61–10, RI60–147, and RI60–179 are hereby terminated, and Slade's obligation to refund excess charges with respect to any of such proceedings is hereby discharged.

JOSEPH ZWERDLING,
Presiding Examiner.

APPENDIX

TABLE A.—*Oil and gas operations, year 1958*

Line No.	(1) Description	(2) Reference	(3) Amount
1	Oil and gas operating expenses	Exhibit 1, schedule B	$106,808
2	Less: Unrecoverable joint venture costs	do	10,000
3	Operating expenses—adjusted		96,808
4	Return at 9 percent	Exhibit 1, schedule B	40,500
5	Federal income tax allowance	See notes 1–5	(5,282)
6	Regulatory expense—estimated	Exhibit 1, schedule B	700
7	Oil and gas production costs		132,726

NOTE 1: Computation of tax allowance.

Return at 9 percent		$40,500
Deduct:		
Tax depletion in excess of book (see notes 2–5)	$28,927	
IDC in excess of book amortization	10,000	
Interest charged to income	13,700	
Total—Per exhibit 1, schedule C, as adjusted		52,827
Return after deductions		(12,327)
Tax at 30 percent corporate rate (42.85 percent—exhibit 1, schedule C) (See note 4)		(5,282)

NOTE 2: Computation of tax depletion in excess of book (computed as on exhibit 1, schedule C).

Percentage depletion—$132,726×23 percent (See notes 3–5)	$30,527
Depletion based on cost	1,600
Tax depletion in excess of book depletion	28,927

NOTE 3: Percentage depletion is computed at 23 percent of cost of service (exhibit 1, schedule C).

Oil and gas operating expenses, adjusted	96,808
Return at 9 percent—Per exhibit 1, schedule B	40,500
Regulatory expense—Per exhibit 1, schedule B	700
Cost of service before tax	138,008

Thus: Percentage depletion=0.23 ($138,008+tax) expressed as $31,742+0.23 T.

NOTE 4: Tax is computed at corporate *normal* tax rate of 30 percent. Return represents net profit *after* the tax allowance. Consequently, the rate applied to return after tax deductions is 30 percent divided by 70 percent or 42.85 percent (exhibit 1, schedule C). Return minus tax deductions times 42.85 percent reflects the allowance in cost of service.

Thus: Tax=0.4285 ($40,500—tax deductions).

NOTE 5: Tax deductions consist of (exhibit 1, schedule C):

I.D.C. in excess of book amortization	$10,200
Interest expense	13,700
Depletion based on cost	(1,600)
Tax deductions before percentage depletion	22,300

Thus: T=0.4285 [$40,500−[$22,300+($31,742+0.23T)]]
T=0.4285 ($40,500−$54,042−0.23T)
T=−$5,803−0.098555T
T=−$5,282

SOUTHERN CALIFORNIA EDISON COMPANY, DOCKET NO. CP61–172; TENNESSEE CALIFORNIA GAS TRANSMISSION COMPANY, DOCKET NO. CP61–173; CALIFORNIA GAS TRANSMISSION COMPANY, DOCKET NO. CP61–174; TENNESSEE CALIFORNIA GAS TRANSMISSION COMPANY, DOCKET NO. CP61–212

ORDER PERMITTING WITHDRAWAL OF APPLICATIONS AND TERMINATING PROCEEDINGS

(Issued January 3, 1963)

On November 23, 1962, the applicants filed a "Joint Notice of Withdrawal of Applications" pursuant to Section 1.11(d) of the Commission's Rules of Practice and Procedure alleging that the project covered by the applications was undergoing revisions of a substantial and far-reaching nature. Good cause exists for permitting the withdrawal and for terminating the proceedings in these dockets.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act to permit the withdrawal of the applications and to terminate the proceedings in Docket Nos. CP61–172, CP61–173, CP61–174, and CP61–212.

The Commission orders:

(A) The withdrawal of the applications in Docket Nos. CP61–172, CP61–173, CP61–174, and CP61–212 is hereby permitted.

(B) The proceeding in Docket Nos. CP61–172, CP61–173, CP61–174, and CP61–212 are terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

COLORADO-WYOMING GAS COMPANY, DOCKET NO. CP63–25

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 4, 1963)

On July 26, 1962, Colorado-Wyoming Gas Company (Applicant) filed in Docket No. CP63–25 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval of the Commission to abandon its 520-horsepower Wellington Compressor Station in Larimer County, Colorado, all as more fully set forth in the application.

The subject facilities were installed in 1926 to supply natural gas to the City of Cheyenne, Wyoming, and areas adjacent thereto. With the commencement of operation of Applicant's Mesa-Cheyenne main line in 1948 and delivery of natural gas from Colorado Interstate Gas Company at two purchase points on said line in 1957, the Wellington Compressor Station was no longer required for delivery of gas to the City of Cheyenne or areas adjacent thereto, or for any other gas deliveries. Actual compressor operation has not been required since 1954, and Applicant can forsee no further requirement for the facilities.

The original cost of the subject facilities was $80,704, and the depreciated cost is $22,193. The cost of abandonment is estimated at $1,460, and salvage value at $526.

Pursuant to due notice, a public hearing was held in Washington, D.C., on December 12, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Colorado-Wyoming Gas Company, a Delaware corporation having its principal place of business in Denver, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G–285 (4 FPC 938).

(2) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission, and the abandonment of said facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(4) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Colorado-Wyoming Gas Company, of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of the subject abandonment with 10 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63-68

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 4, 1963)

On September 17, 1962, El Paso Natural Gas Company (Applicant) filed in Docket No. CP63-68 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963 and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application on file with the Commission.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally co-extensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $5,000,000 and no single project will exceed a cost of $500,000. Applicant states that no additional financing will be required to pay the construction costs.

Pursuant to due notice, a public hearing was held in Washington, D.C., on December 11, 1962, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G-288 (4 FPC 486).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of nat-

ural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $5,000,000 with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct during the calendar year 1963, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Applicant.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement under oath showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73

psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $5,000,000 with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

R. E. SMITH; R. E. SMITH, ET AL.

ORDER ACCEPTING OFFER OF SETTLEMENT

(Issued January 4, 1963)

On December 7, 1962, R. E. Smith (Smith) tendered for filing a notice of change in its FPC Gas Rate Schedule No. 2, proposing a price of 14.6¢ per Mcf for Smith's jurisdictional sale of gas to Texas Eastern Transmission Corporation (Texas Eastern) from the Carthage Field, Panola County, Texas (Railroad Commission District No. 6). Also, on that same date, R. E. Smith, *et al.* (Smith) tendered for filing a notice of change in its FPC Gas Rate Schedule No. 5, proposing a price of 13.8733¢ per Mcf for Smith's jurisdictional sale of gas to Texas Eastern from the Dallas Husky Field, Goliad County, Texas (Railroad Commission District No. 2).

Concurrent with the tender for filing of the proposed rate increases, Smith submitted an Offer of Settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure.

In its Offer of Settlement, Smith proposes to delete from the contract compromising its FPC Gas Rate Schedule No. 2, (1) the present periodic price escalations, (2) the favored-nations clause; (3) the price redetermination provision, and provide instead for five-year periodic increases of 1.0¢ per Mcf. Smith also proposes to delete from the contract compromising its FPC Gas Rate Schedule No. 5, (1) the present periodic price escalation, and (2) the favored-nations clause, and provide instead for five-year periodic increases of 0.5¢ per Mcf.

Texas Eastern has joined in the Offer of Settlement and approves the proposed contractual amendments.[1] No objection to the proposed settlement has been received from any interested party.

Since the proposed rates of 14.6¢ per Mcf, including applicable tax reimbursement under Gas Rate Schedule No. 2 and 13.8733¢ per Mcf, including applicable tax reimbursement under Gas Rate Schedule No. 5 are acceptable under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1 (18 CFR, Chapter I, Part 2, Section 2.56) issued December 20, 1960 for jurisdictional sales of natural gas in Texas Railroad Commis-

[1] Smith has filed, concurrently with its Offer of Settlement, an executed amendment to its gas purchase contract with Texas Eastern compromising Rate Schedule No. 5, implementing the provisions of the Offer of Settlement with respect to that contract. The amendment is accepted as a supplement to the contract, as hereinafter provided.

sion District Nos. 2 and 6, respectively, it appears that the public interest will best be served by accepting Smith's proposed settlement.

There have been no suspended rates under either rate schedule, and consequently there are no refunds involved herein.

We desire to make it clear that acceptance of this Offer of Settlement shall not be construed as approval of any future increased rates proposed by Smith under the periodic escalation provisions or otherwise.

The Commission finds:

The proposed settlement on the basis described herein, as more fully set forth in the Offer of Settlement filed by Smith on December 7, 1962, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved by the Commission and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Smith with the Commission on December 7, 1962, is hereby approved in accordance with the provisions of this order.

(B) Smith shall file, within 30 days from the date of issuance of this order, a contractual amendment to its FPC Gas Rate Schedule No. 2, which Smith shall execute with Texas Eastern in conformity with Smith's Offer of Settlement. The contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon notification by the Secretary that Smith had complied with the terms and conditions of this order, the proposed rate and charge of 14.6¢ per Mcf under Smith's Gas Rate Schedule No. 2 shall be effective as of January 7, 1963, the first day after expiration of the required statutory notice.

(D) The executed amendment to Smith's gas purchase contract with Texas Eastern, on file with the Commission as Smith's FPC Gas Rate Schedule No. 5, implementing the provisions of the Offer of Settlement herein and the proposed rate and charge of 13.8733¢ per Mcf are hereby accepted for filing as Supplement No. 2 to Smith's FPC Gas Rate Schedule No. 5, effective as of January 7, 1963, the first day after expiration of the required statutory notice.

(E) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceedings which are presently being heard, or in any proceedings now pending, or hereinafter instituted by or against Smith.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

TEXACO INC., DOCKET NO. CI63-468

ORDER DENYING APPLICATION FOR REHEARING AND RECONSIDERATION

(Issued January 4, 1963)

On December 5, 1962, Texaco Inc. (Texaco), pursuant to Section 19(a) of the Natural Gas Act (Act) and Section 1.34 of the Commission's Rules of Practice and Procedure filed an application for rehearing of the Commission's order of November 6, 1962, which rejected the proposed rate schedule and related certificate application submitted by Texaco in the above-styled proceeding.

The Commission's order of November 6, 1962, in rejecting Texaco's proposed rate schedule and related certificate application stated that, "the gas purchase agreement contains pricing provisions other than those permitted by Section 154.93 of the Commission's regulations".

Texaco premises its request for rehearing and reconsideration on numerous grounds; however, it is generally the contention of Texaco that the Commission was not authorized under the Act and existing law to promulgate such regulations and further that the action by the Commission in summarily rejecting this rate schedule was illegal.

The rate schedule submitted by Texaco and rejected by the Commission in the above-styled proceedings provided for three alternate methods for establishing prices during specified four year intervals succeeding the initial five years following the commencement of deliveries. During the initial five year period the price of gas was fixed at 21.5 cents per Mcf. Thereafter the price level would change and would be subject to further change, once in four year periods, in one of the following ways:

1. By a two cents escalation at the conclusion of the first five years after the commencement of deliveries and a two cent escalation for each of the three succeeding four year periods until the price escalated to 29.5 cents per Mcf (Art. 7, Sec. 1 proposed rate schedule).

2. At the beginning of each of the four year periods commencing with the conclusion of the first five years after the initiation of deliveries of gas, Texaco's proposed rate schedule makes provisions for price redeterminations equivalent to the average of the three highest field prices being paid or payable within a prescribed purchase area. This average of the three highest prices upon which these redeterminations can be predicated specifically includes (a) prices in effect under bond and subject to refund under orders of the Federal Power Commission; (b) prices payable but not being paid because the producer's rate schedule covering the payment thereof has not been filed with said Commission; (c) price payable but not being paid because the producer's rate schedule covering the payment thereof has not yet become effective or (d) price payable but not being paid on account of suspension thereof under order of said Commission pursuant to Section 4(e) of the Natural Gas Act[1] (Art. 7, Sec. 2, proposed rate schedule).

3. If at the beginning of any of the above-mentioned four-year periods the buyer under Texaco's proposed rate schedule purchases gas for interstate pipeline transmission and resale, *at a delivery point in any field in the prescribed purchase area* from which such gas is produced, at a price higher than the price payable under categories 1 or 2, then the price to be paid by the buyer to Texaco during such period shall be adjusted so as to be the fair equivalent of buyer's higher price (Art. 7, Sec. 3 of Texaco's proposed rate schedule).

Hence, it is apparent that after deliveries have been initiated for a period of five years that the proposed rate schedule provides for a myraid of methods for fixing a price for succeeding four year periods under the rate schedule. Texaco thus reserves unto itself the opportunity of three alternate methods for establishing a new price during each of the successive four year periods depicted in its rate schedule. Through this complex of multiple price determinants provided for in its proposed rate schedule, Texaco has established a rigid network of pricing provisions that can alternately be invoked in order to assure that it receives the highest anticipated jurisdictional prices payable for gas in the prescribed purchase area. Under Texaco's proposed rate schedule, neither its buyer nor the public are apprised of what method it will choose during successive four year periods to establish the price payable under its contract. If

[1] For the purpose of this redetermination, Art. 7, Sec. 2 of Texaco's proposed rate schedule provides that certain adjustments are to be made in the event that the three highest average contracts utilized in the redetermination contain provisions that vary significantly from corresponding provision in Texaco's proposed rate schedule with respect to such items as point of delivery, delivery pressures, etc.

Texaco found itself in the position of enjoying the highest price within the purchase area, it could forego the invocation of the redetermination provisions under its rate schedule and rely upon the 2 cent escalation provisions to further increase the price payable under its contract. Texaco's rate schedule thus contemplates a contractual price which is either the highest price in the purchase area or equivalent to the highest. The level of the price to be determined under the provisions of the rate schedule is not predicated upon any basis geared to assure that such a price is just and reasonable or even required by the public convenience and necessity.

Section 16 of the Act authorizes the Commission to issue rules and regulations of general applicability found necessary or appropriate to carry out the provisions of the Act. It is manifest that Texaco's alternate pricing provisions in addition to being offensively burdensome to the effective administration of the Act run directly counter to the purpose envisaged by Congress of maintaining the "lowest reasonable rate".[3] The Commission has repeatedly contended that Sections 4, 5 and 7 of the Act contemplate that it will refuse to sanction contract provisions that are adverse to the public interest.[3]

In the *Pure Oil* case[4] the Commission had occasion to examine the effect that indefinite escalation clauses in producer contracts would have both upon the public interest and regulatory objectives of the Act. It held in the *Pure Oil* case that indefinite escalation clauses were, *per se*, contrary to the public interest on numerous grounds.

In Order No. 232A issued on March 31, 1961, 25 FPC 609, the Commission reaffirmed its findings in the *Pure Oil* case. However, it also recognized the validity of its earlier findings that the use of long term contracts for the sale of natural gas by producers to pipelines is desirable, appropriate and clearly in the public interest.

In Order No. 232A the Commission reached the conclusion that the elimination of all indefinite escalation provisions from long term contracts could prove to be too restrictive in that such provisions could serve to add a degree of pricing flexibility that might be warranted due to changing and intervening circumstances that might arise over the long span of years envisaged by such contracts. However, the Commission was quite specific in its Orders Nos. 232A and 242[5] that only those rate schedules containing limited price—redetermination provisions as prescribed in Section 154.93 of its regulations would be accepted for filing. These limitations upon price redetermination provisions in producer rate schedules were incorporated into the Regulations by the Commission in order to afford some flexibility in the pricing provisions in long term contracts that would not prove offensive to the public interest.

Texaco's proposed rate schedule contains price redetermination provisions that are not in conformity with Section 154.93 of the Commission's Regulations. The following are some of the reasons why Texaco's rate schedule contravenes Section 154.93 of the Regulations:

(1) Texaco's pricing provisions provide that a redetermination can be made at four year intervals; the Regulations require that redeterminations be limited to once every five years.

(2) The Regulations provide that the price redetermination be based upon producer rates which are not in issue in suspension or certificate proceedings;

---

[2] See § 5a of the Act.

[3] See Order 242 issued on February 8, 1962, 27 FPC 339, and Commission's order in *Atlantic Refining Co.*, Docket No. CI62–1562 issued on September 13, 1962, 28 FPC 469.

[4] *The Pure Oil Company*, 25 FPC 383.

[5] Order No. 242 was issued on February 8, 1962, at Docket No. R–203, 27 FPC 339.

Texaco's pricing provisions specifically provide for redeterminations that are based on producer rates that have been suspended and upon producer rates that have not been duly certificated by the Commission.

(3) The Regulations provide that a redetermination can be made once in five-year contract periods during which there is no provision for a change in price to a specific amount, Texaco's rate schedule provides for a change in price to a specific amount in the same interval of time in which it also provides for a redetermination.

(4) The Regulations require that the redetermination be based upon and not higher than a producer rate or producers rates which are subject to the jurisdiction of the Commission; Texaco's rate schedule is not restricted to redeterminations that are based solely upon *producer* rates.

The Commission promulgated Orders Nos. 232A and 242 after public notice of proposed rulemaking was given by publication in the Federal Register. In response to such notice, numerous comments were submitted and these were given due consideration by the Commission prior to the issuance of these orders.

The Commission finds:

That the public convenience and necessity requires that the application for rehearing and reconsideration filed by Texaco Inc. in the above-styled proceedings be denied in all respects.

The Commission orders:

That the application for rehearing and reconsideration filed by Texaco Inc. in the above-styled proceeding be and hereby is denied in all respects.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63-18

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 4, 1963)

On July 16, 1962, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP63-18 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 209 feet of pipeline and appurtenances located within the bounds of Applicant's existing Cow Island Junction in Vermilion Parish, Louisiana, all as more fully set forth in the application.

The subject facilities will be used for the purpose of making natural gas fuel[1] available to the Cow Island Extraction Plant of Goliad Corporation and Union Oil Company of California from Applicant's transmission purchase laterals converging within Cow Island Junction.

The estimated cost of the subject facilities is $39,472, for which Applicant will be reimbursed by the extraction plant operators.

Pursuant to due notice, a public hearing was held in Washington, D.C., on December 11, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing

[1] The gas stream containing the fuel also contains gas from which a portion of the ethane and heavier hydrocarbons may be extracted by the plant operators before return to Applicant's system.

that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(2) The facilities hereinbefore described, all as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2111

ORDER APPROVING PROJECT EXHIBITS AND PRESCRIBING ANNUAL CHARGES

(Issued January 7, 1963)

On March 30, 1961, Pacific Power & Light Company, licensee for major Project No. 2111, filed for Commission approval revised Exhibit F and revised and new Exhibits K and L drawings.

Commission approval of Exhibit F is not required. Since revised Exhibit L, Sheets 8 through 14 (FPC Nos. 2111–42 through –48) and new Exhibit L,

Sheets 15 through 17 (FPC Nos. 2111–49 through –51) show only geologic information, their approval by the Commission is not required.

The revised Exhibit K drawings show for the first time the amount of lands of the United States occupied by the project as being 359.23 acres. Revised Exhibit L, Sheet 2 (FPC No. 2111–41) shows the constructed slope of the spillway chute and the elevations of the toe of the spillway training walls.

The Commission finds:

(1) The following described exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit L–2 (FPC No. 2111–27), now part of the license and which has been superseded, should be eliminated from the license:

	FPC Nos.	Entitled
Exhibit K sheets No. 1 through 9	2111–32 through –40	Project Area and Project Boundary.
Revised exhibit L sheet 2	FPC No. 2111–41	Sections Swift No. 1.

(2) The amount of annual charges to be paid under the license for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands within the Gifford Pinchot National Forest by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The exhibits described in the above finding as conforming to the Commission's rules and regulations are hereby approved as part of the license for the project, and the exhibit described in the same finding as being superseded is hereby eliminated from the license for the project.

(B) Article 37 of the license is hereby modified by revising subparagraph (ii) thereunder to read as follows:

> (ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of those used for transmission line right-of-way, $862.15, effective as of May 1, 1956, the effective date of the license; and

and by adding thereto the following subparagraph (iii):

> (iii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands used for transmission line right-of-way only, an amount hereafter to be determined by the Commission.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PAN AMERICAN PETROLEUM CORPORATION

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued January 7, 1963)

Pan American Petroleum Corporation (Pan American) on December 6, 1962, filed a motion for reconsideration of the telegram issued by the Secretary on

November 1, 1962, and confirmed by letter on November 5, 1962, which rejected notices of changes in rates tendered by Pan American to its FPC Gas Rate Schedule Nos. 49 and 111, respectively.[1] The filings were rejected because the notices of changes in rates were in error in that thy reflected the contract prices but not the contract pressure base corresponding to such prices. The rejection was without prejudice to the submittal of proper filings, and in accordance therewith, Pan American on December 6, 1962, resubmitted the rate increase filings together with letters changing the pressure base from 16.4 psia to 14.65 psia under the contracts comprising Pan American's subject rate schedules.

In its motion for reconsideration Pan American requests that the rejected notices of change be reinstated and accepted for filing effective 30 days from the original date of filing, or, in the alternative, that the 30 day notice period be waived with respect to the resubmitted filings. In support thereof, Pan American states that on November 2, 1962, the letter agreements were filed which affirmed the change of pressure base under the subject contracts. Pan American thus states that because of such filings Pan American fully complied with the Secretary's telegram of November 1, 1962, and letter of November 5, 1962, two days prior to the expiration of the thirty-day period following the date of original filings.

The Secretary's action in rejecting Pan American's original filings was perfectly proper under the facts as they existed at that time in light of the deficiencies in Pan American's filings. The mere fact that Pan American subsequently rectified these deficiencies does not in our view warrant any modification of the Secretary's action. Furthermore, good cause has not been shown for waiving the 30 day notice requirement provided under Section 4(d) of the Act with respect to the resubmitted filings.

The Commission orders:

For the reasons set forth above, Pan American's motion for reconsideration filed on December 6, 1962 is hereby denied.

[1] The rejected notices of change were tendered on October 5, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. RP61-18

ORDER GRANTING MOTION IN PART AND AUTHORIZING MAKING OF REFUND

(Issued January 7, 1963)

United Gas Pipe Line Company (United) on November 20, 1962, filed a motion for an order authorizing and directing the distribution of refunds in the above-styled proceeding in the principal amount of $4,837,232.

By order issued March 12, 1962, in the consolidated proceedings in Docket No. G-9547, *et al.*, 27 FPC 504, the Commission approved an agreement which provided for final settlement of six dockets[1] and for determination of the cost of service for the period beginning June 15, 1961, during which the Docket No. RP61-18 rates would be in effect upon the basis of a post-audit of United's books and records. Pursuant to that agreement, United served its cost of service studies on the parties to the proceeding and conferences thereon were held on November 14 and 15, 1962. No agreement of the parties on any reserved issue

[1] The dockets fully settled were G-9547, G-10592, G-12801, G-15360, G-18406, and RP60-2.

was reached during that conference. United in its motion states that as a result a hearing will be necessary in this docket, and that such hearing may have to await conclusion of the hearing in its Docket No. RP63–1.

United urges that it is ready, able and willing to make the refunds indicated by its post-audit cost of service studies, that its customers desire those refunds to be made, and that making of such refunds would be in the public interest and would relieve it of the burden of paying interest on the amounts refunded. In the alternative, should the Commission refuse to grant the motion, United asks that it be permitted to entrust the sums to the Commission in escrow or invest them in United States Government securities with any interest thereon payable to beneficiaries of the entrusted amounts.

Answers to United's motion have been filed by Southern Natural Gas Company, Texas Eastern Transmission Corporation, Willmut Oil & Gas Company, Mississippi Valley Gas Company and Laclede Gas Company. All parties other than Laclede indicate willingness to accept the refunds as proposed by United in its Appendix B report. All parties other than Texas Eastern indicate, however, that if the amounts are not refunded forthwith, the amount in question, or any part thereof, should be subject to interest as set forth in the Settlement Agreement.

Laclede Gas Company (Laclede), which expressly reserved the right to contest the demand component reflected in the design of United's PL–C rates applicable to pipeline customers in United's Central Zone when it acceded to the Agreement, opposes United's proposal for immediate refund of the full amounts as computed by United and submitted in its report under Appendix B of the Settlement Agreement. Laclede stands upon its express reservation of its claimed right to a determination of the design of United's PL–C rates for the period beginning June 15, 1961. It is Laclede's position that all refunds may properly be made to Jackson Zone customers but that refunds should be made only in part to Central Zone pipeline customers; that is refunds to the latter should be based upon a demand charge of 75¢[2] or $1.43,[3] whichever results in the lesser amount of refund. It further urges that the difference between the total of these lesser amounts and the overall amount proposed to be refunded by United in the Central Zone should be retained by United together with 7% interest thereon until such time as the issue of rate design is resolved by the Commission. Laclede estimates a figure of approximately $200,000 as representative of the difference[4] between the refunds proposed by it and United, respectively.

Texas Eastern in its answer contends that the adoption of Laclede's proposal will defer refund of about $200,000 to Texas Eastern out of a total of approximately $2,200,000 it would receive under United's proposed distribution. It also alleges that whatever refunds might ultimately be withheld from Texas Eastern under Laclede's proposed rate design would accrue to the benefit of Southern Natural and Texas Gas Transmission Company, neither of which companies has raised the rate design issue or sought further refunds.

We have considered United's motion and the answers thereto filed by each of the parties in the light of the aforementioned Settlement Agreement and our order issued March 12, 1962, with respect thereto. It is our view that the protection of the rights expressly reserved by Laclede in this proceeding require that the amounts determined under Laclede's plan of refund for the Central Zone pipeline customers should be retained for subsequent refund by United, with interest, until such time as the reserved rate design issue has been determined.

---

[2] As advocated by Laclede.
[3] As advocated by all other parties.
[4] These figures have not been verified by staff examination.

Deferral of refund of an amount approximating the difference indicated in Laclede's answer, and the interest thereon, does not place any undue burden on United or its customers.

The Commission finds:

United should be authorized to make refunds to its Jackson and Central Zone customers as hereinafter provided and any difference between the total of such refunds and the amount proposed to be refunded by United in its motion filed November 20, 1962, should be retained by United, with interest thereon, until determination of the rate design question reserved in this proceeding.

The Commission orders:

(A) United shall make refunds to its Northwest Mississippi and Jackson Zone customers of the portion of the $4,837,232 applicable to the customers in those zones in accordance with the provisions of the Settlement Agreement and as proposed in its motion filed November 20, 1962.

(B) With respect to the portion of the $4,837,232 of refunds applicable to the Central Zone United shall compute a distribution to its pipeline customers in that Zone based upon a demand charge of either 75¢ or $1.43, whichever produces the lesser amount of refund with regard to each pipeline customer, and shall make refunds to Central Zone pipeline customers in accordance with the distribution thus computed. Refunds to Central Zone City gate and transportation customers shall be made in accordance with the provisions of the Settlement Agreement and as computed by United and in accordance with Appendix B referred to in the Motion filed November 20, 1962.

(C) The portion of $4,837,232 remaining with United under the computations prescribed in paragraph (B) shall be retained by United for refund together with interest thereon computed at 7% per annum, subject to determination of the issues reserved in this proceeding.

(D) Within 15 days from the date of making the refunds ordered hereinabove, United shall report to the Commission, in writing and under oath, the amount of refund made to each of its customers, showing separately the amount of principal and interest so paid, and the bases upon which such refunds were computed, and shall serve a copy of such report upon each of the customers receiving a refund.

(E) Any motions, agreements, and interim refunds approved herein are without prejudice to the expressly reserved rights or contentions of the parties to the proceeding in Docket No. RP61–18.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

JAMES W. WITHERSPOON, DOCKET NO. RI63–196

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued January 7, 1963)

On November 30, 1962, James W. Witherspoon (Witherspoon), filed a motion for reconsideration of the Commission's order issued November 21, 1962,[1] in the

[1] Issued under lead docket, Humble Oil & Refining Company (Operator), *et al.*, Docket No. RI63–194.

above-designated proceeding, providing for hearing on and suspension of the proposed change in rate designated as Supplement No. 1 to James W. Witherspoon FPC Gas Rate Schedule No. 1.

In support of its motion, Witherspoon states that the subject rate increase is justified in accordance with terms of its contract with the buyer, El Paso Natural Gas Company, there is only one well involved from which is derived an average of only $100.00 per month, and there is so little involved that he could not afford the expense necessary to attend a hearing; therefore, the Commission should modify its order of November 21, 1962, by permitting Witherspoon to charge and collect the proposed rate without such rate being subject to suspension.

The increased rate proposed by Witherspoon exceeds the applicable area price level set forth in the Commission's Statement of General Policy No. 61–1, as amended [18 CFR, Chapter 1, Part 2, Section 2.56], and may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful. It would therefore not be appropriate to modify the Commission's order of November 21, 1962, even though the amount of annual increase is relatively small. In addition, the justness and reasonableness of the proposed rate will be determined in an area rate proceeding in which industry and area cost data of producers will be utilized, thus obviating the necessity of Witherspoon making an appearance at the hearing.

The Commission finds:

The motion for reconsideration filed by Witherspoon on November 30, 1962, in the proceeding in Docket No. RI63–196, sets forth no new facts or legal considerations which were not fully considered prior to the issuance of our order of November 21, 1962, or which now having been considered warrant the modification of the said order.

The Commission orders:

The motion for reconsideration of the Commission's order of November 21, 1962, filed by James W. Witherspoon on November 30, 1962, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

ALABAMA POWER COMPANY, PROJECT NO. 2146

ORDER APPROVING REVISED PROJECT EXHIBITS

(Issued January 8, 1963)

On January 19, 1962, Alabama Power Company, licensee for major Project No. 2146, filed for Commission approval revised Exhibits L and M showing proposed changes and modifications to the Lock 3 development of Coosa River Project No. 2146, located on the Coosa River in Alabama and Georgia.

As shown on the revised exhibits, the principal changes proposed are: (1) change the spillway gates from 10–40 feet wide by 32 feet high to 6–40 feet wide by 26 feet high (with spillway sill increased in elevation from 473 to 480 feet); (2) increase the top elevation of the earthern dikes and concrete structures from 523 feet to 539 feet; (3) move the axis of Lock 3 dam upstream about 2,700 feet to a more favorable foundation site; and (4) change the type of powerhouse from an indoor type to a semioutdoor type design to provide a saving in initial cost and future building maintenance.

The spillway and earthern dike changes were occasioned by the results of continuing studies made by the licensee. An economic study by the licensee of various dike heights and spillway size combinations indicated that optimum economy was realized in the revised design plans shown on the afore-mentioned revised project exhibits. The results of the proposed changes have been reviewed by our staff and were found to be reasonable, and also that the new site will provide a better foundation and require substantially less foundation treatment with resultant additional economy.

The Secretary of the Army and the Chief of Engineers have advised that: the plans of the structures affecting navigation are satisfactory and existing provisions in the license are adequate to protect the interests of navigation; and the plans and structures affecting flood control are considered satisfactory.

The Commission finds:

(1) The following described revised exhibits conform to the Commission's Rules and Regulations and should be approved as part of the license for the project to the extent herein indicated:

Exhibit L, revised	FPC No.	Title, General Design Drawings, Coosa River Development, Lock 3 Dam
Sheet No. 7	2146-173	Plan and Typical Sections.
Sheet No. 7A	2146-174	Powerhouse Transverse Section.
Sheet No. 7B	2146-175	Powerhouse Transverse Section.
Sheet No. 7C	2146-176	Powerhouse Longitudinal Section.
Sheet No. 7D	2146-177	Powerhouse Floor Plans.
Sheet No. 7E	2146-178	Powerhouse Floor Plans.
Sheet No. 7F	2146-179	Powerhouse Floor Plans.

Exhibit M (Revised) General Description of mechanical, electrical and transmission equipment, filed in the Commission on January 19, 1962, insofar as it pertains to the Lock 3 Development.

(2) Exhibit L, Sheet No. 7 (FPC No. 2146-96) and Exhibit M, insofar as it relates to the Lock 3 development, now parts of the license and which have been superseded to the extent herein indicated, should be eliminated from the license.

The Commission orders:

(A) The revised exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2146.

(B) The Exhibit L drawing described in finding (2) above is hereby eliminated from the license for the project, and the Exhibit M referred to in the same finding is hereby eliminated from the license for the project, insofar as it relates to the Lock 3 development.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP62-121

FINDINGS AND ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 8, 1963)

On October 1, 1962 Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP62-121 an application to further amend the order in said

docket heretofore issued by the Commission on May 18, 1962, 27 FPC 997, by authorizing the construction and operation of tap and metering facilities and the sale and delivery of an additional daily contract quantity of 14,000 Mcf of natural gas to Iowa-Illinois Gas and Electric Company (Iowa-Illinois) for resale, all as more fully set forth in the application to amend.

The proposed facilities for the establishment of an additional delivery point for sales to Iowa-Illinois will be in Henry County, Illinois, and are estimated to cost $29,100, to be financed from funds on hand. Iowa-Illinois has entered into a contract to supply Nitrin Corporation's plant near Cordova, Illinois, with 14,000 Mcf of natural gas per day on a firm basis for use in the manufacture of fertilizer products.

On November 5, 1962, Applicant filed in the subject docket an application to amend the order of May 18, 1962, in said docket by authorizing the sale and delivery of an additional daily contract quantity of 100 Mcf of natural gas to the City of Sullivan, Illinois, for resale, and an additional daily contract quantity of 407 Mcf of natural gas to Associated Natural Gas Company for resale in Jackson, Missouri, all as more fully set forth in the application to amend.

Both the City of Sullivan and Associated Natural Gas Company have advised Applicant that the additional gas is necessary to meet 1962–63 winter demands. The additional quantities will be delivered through existing connection and metering facilities.

Notice of the subject applications to amend was issued on December 4, 1962, and published in the Federal Register on December 11, 1962 (27 F.R. 12231). No protest, request for hearing, or petition to intervene has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and required by the public convenience and necessity that the Commission's order of May 18, 1962, in Docket No. CP62–121, should be further amended to authorize the construction and operation of tap and metering facilities and the sale and delivery of an additional daily contract quantity of 14,000 Mcf of natural gas to Iowa-Illinois Gas and Electric Company for resale, and to authorize the sale and delivery of an additional daily contract quantity of 100 Mcf of natural gas to the City of Sullivan, Illinois, for resale, and an additional daily contract quantity of 407 Mcf of natural gas to Associated Natural Gas Company for resale in Jackson, Missouri.

The Commission orders:

(A) The Commission's order of May 18, 1962, in Docket No. CP62–121, be and the same is hereby further amended to authorize the construction and operation of tap and metering facilities and the sale and delivery of an additional daily contract quantity of 14,000 Mcf of natural gas to Iowa-Illinois Gas and Electric Company for resale, and to authorize the sale and delivery of an additional daily contract quantity of 100 Mcf of natural gas to the City of Sullivan, Illinois, for resale, and an additional daily contract quantity of 407 Mcf of natural gas to Associated Natural Gas Company for resale in Jackson, Missouri.

(B) In all other respects, said order of May 18, 1962, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

LICENSE APPLICATIONS—REVISION OF REGULATIONS, DOCKET NO. R-223

ORDER NO. 260

AMENDING SUBCHAPTERS B AND D OF REGULATIONS UNDER THE FEDERAL POWER ACT

(Issued January 8, 1963)*

The Commission has under consideration in this proceeding the amendment of its regulations under the Federal Power Act with respect to license applications and approved forms for same.

The purposes of the proposed amendments were to provide for an increase in the numbers of copies of license applications to meet the minimum requirements of the Commission; to require the filing of a recreation plan as part of applications for licenses to assist in expediting the processing of such applications; and to revise applications for license for minor projects to conform with Public Law 87-647, approved September 7, 1962 (76 Stat. 447, 16 U.S.C. 803(b), 803(e), 803(i)), which authorizes the Commission to issue minor licenses for existing and proposed projects having an installed capacity of not more than 2,000 horsepower.

General public notice of the proposed rulemaking was given by publication in the Federal Register on October 19, 1962 (27 F.R. 10262). In response to the notice, written comments and views were received from several interested licensees under the Federal Power Act and Federal agencies. Most of the comments expressed concern over the proposed amendment to Section 4.41 of Part 4 of the Commission's Regulations under the Federal Power Act (Title 18, CFR), which would require the filing of a new Exhibit R as a part of each application for license, the same being a plan for the recreational use of project lands and waters. The concern was that preparation of such an exhibit, in the manner proposed, would be difficult, if not impossible, without causing excessive and unreasonable delay in the filing of such applications, and that the cost of such recreational facilities might have an adverse effect on the economics of a proposed hydroelectric project unless such costs were related to the economics of the project. Request was made that an extension of time to February 1, 1963, be granted for the submission of written comments and views respecting the proposed amendment of said Section 4.41. The requested extension of time having been granted (27 F.R. 12378) the proposed amendments hereinafter adopted do not include any proposed amendment of said Section 4.41. No objections were raised to the rules as hereinafter amended.

Upon consideration of the entire record in this proceeding, *the Commission finds:*

The amendments hereinafter adopted are necessary and appropriate in order to carry out the provisions of the Federal Power Act.

---

*Published in the Federal Register on January 11, 1963 (28 F.R. 314).

Acting pursuant to the authority granted by the Federal Power Act, particularly Sections 9, 10(a), 10(i), and 309 thereof (16 U.S.C. 802, 803, 825h), *the Commission orders:*

(A) Parts 4, 5, 16 and 24 of Subchapter B, Regulations under the Federal Power Act, Chapter I of Title 18, Code of Federal Regulations, are hereby amended to prescribe therein (in lieu of existing sections or the indicated portions thereof) amended sections 4.40, 4.50, 4.60, 4.70, 4.80, 4.82, 4.84, 5.1, 16.1, and 24.1 to read as set forth in the attachment* hereto which is made a part hereof by reference.

(B) In Part 131 of Subchapter D, Approved Forms, Federal Power Act, Chapter I of Title 18, Code of Federal Regulations, § 131.6 is hereby amended to read as set forth in the afore-mentioned attachment hereto.

(C) The amendments prescribed herein are effective on and after January 1, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 935

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued January 8, 1963)

On November 3, 1959, Pacific Power & Light Company, licensee for major Project No. 935, filed for Commission approval revised Exhibit K, Sheet 8 (FPC No. 935–79), showing the proposed elimination from the project of certain lands presently occupied by constructed works of the licensee's Project No. 2071. Application to include the lands under the license for Project No. 2071 was also filed on November 3, 1959.

Commission approval of the above-mentioned revised Exhibit K will not affect the amount of annual land charges now provided for in the license for Project No. 935 since such charges are determined in accordance with Regulation 14 of the Commission's old rules and regulations, i.e., on a ratio basis of United States lands to the total project lands involved.

The Commission finds:

The above-described revised Exhibit K conforms to the Commission's rules and regulations and should be approved as part of the license for Project No. 935 and Exhibit K, Sheet 8 (FPC No. 935–55) now part of the license and which has been superseded, should be eliminated from the license for the project.

The Commission orders:

The revised Exhibit K mentioned in the above finding is hereby approved as part of the license for Project No. 935, and the Exhibit K described in the same finding as being superseded is hereby eliminated from the license for the project.

---

*Omitted in printing.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2071

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued January 8, 1963)

On November 3, 1959, Pacific Power & Light Company, licensee for major Project No. 2071, filed for Commission approval revised Exhibit K drawings and a revised Exhibit F for the project.

Revised Exhibit K shows existing conditions at the project, such as: the project land area by parcels rather than by fractions of sections; complete ownership of land status; and the removal from the project of temporary substations. The above-mentioned Exhibit F requires no approval by the Commission.

Commission approval of the revised Exhibit K drawings will show the location of 2.75 acres of lands of the United States as correctly being within the project boundary of Project No. 2071 rather than as overlapping the project boundary of the licensee's Project No. 935. However, Commission approval of the revised exhibit will not alter the amount of annual charges due the United States for the use of such lands since the annual charges specified in the license for Project No. 2071 include a charge for the 2.75 acres.

The Commission finds:

The following described revised Exhibit K drawings conform to the Commission's rules and regulations and should be approved as part of the license for Project No. 2071, and the Exhibit K drawings described herein as being superseded and which are now part of the license for the project, should be eliminated therefrom:

Revised Exhibit K	Entitled	Superseded Exhibit K
Sheet 1 (FPC No. 2071-31)	Yale H. E. Development Project Area and Project Boundary.	FPC No. 2071-22
Sheet 2 (FPC No. 2071-32)	do	FPC No. 2071-23.
Sheet 3 (FPC No. 2071-33)	do	FPC No. 2071-24
Sheet 4 (FPC No. 2071-34)	do	FPC No. 2071-25.
Sheet 5 (FPC No. 2071-35)	do	FPC No. 2071-26.
Sheet 6 (FPC No. 2071-36)	do	FPC No. 2071-27.
Sheet 7 (FPC No. 2071-37)	do	FPC No. 2071-28.
Sheet 8 (FPC No. 2071-38)	do	FPC No. 2071-29.
Sheet 9 (FPC No. 2071-39)	Yale H. E. Development Project Transmission Line.	FPC No. 2071-30.

The Commission orders:

The revised Exhibit K drawings described in the above finding are hereby approved as part of the license for Project No. 2071, and the Exhibit K drawings described in the same finding as being superseded are hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2071 (YALE)

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COST; NET CHANGE THEREIN; AND PRESCRIBING ACCOUNTING THEREFOR

(Issued January 8, 1963)

Pacific Power & Light Company, Licensee for Project No. 2071 (Yale),[1] filed its initial cost statement on April 2, 1956, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming as of July 31, 1954, an actual legitimate original cost of Project No. 2071 in the amount of $36,590,088.25.[2]

The Commission's staff made a field examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the claimed cost. In the course of that examination the staff reviewed Licensee's recorded additions in the amount of $156,348.41, to project cost for the period from August 1, 1954 through December 31, 1957, comprising gross additions of $53,786.09, gross retirements of $1,679.50, and debit adjustments of $104,241.82, as shown by Licensee's books of account.

Following that examination the staff, subject to Commission approval, proposed certain adjustments which are concurred in by representatives of the Licensee, involving (1) the reclassification of a number of items within project plant accounts; (2) the adjustment of claimed and recorded initial project cost by elimination of the net amount of $920,117.22 therefrom; (3) the adjustment of net additional cost for the period August 1, 1954, through December 31, 1957, by elimination of the net amount of $21,951.11 therefrom; and (4) the accounting disposition of all amounts involved in the proposed adjustments.

Based on the proposed adjustments the revised initial project cost as of July 31, 1954, would be $35,669,971.03; the revised net increase in project cost for the period from August 1, 1954, through December 31, 1957, would be $134,397.30; and the resulting revised claimed cost of the project as of December 31, 1957, would be $35,804,368.33.

The net amount of $920,117.22 proposed to be eliminated from claimed and recorded project cost as of July 31, 1954, results from: (1) elimination of a claim in the amount of $351,226.05 for estimated loss of generation at Licensee's Project No. 935 (Merwin), which Licensee claims to have incurred when filling the Yale reservoir; (2) elimination of administrative salaries amounting to $6,709.31, charged to project operations; (3) elimination of the cost of non-project land in the amount of $5,159.36; (4) elimination of the cost of preliminary engineering and survey work prior to 1927 which became obsolete and was

[1] The project is located above the Licensee's Merwin Project No. 935, on the Lewis River in Clark and Cowlitz Counties in the State of Washington. It may be described generally as the Yale Project. The license, issued pursuant to Section 4(e) of the Federal Power Act, is for a period of fifty years, effective as of May 1, 1951. Based upon the average in-service date of generating units included in the project, the commencement of commercial operation of the project occurred October 3, 1953.

[2] Article 23 of the license provides for Commission determination of the actual legitimate original cost of the project and of any additions thereto or betterments thereof.

never useful in the construction of the project, in the amount of $29,966.19; (5) elimination of the amount of excess interest claimed during construction in the amount of $524,325.05; (6) elimination of claims for miscellaneous items in the amount of $17,559.36; (7) reduction of a credit for power produced, subsequent to October 3, 1953, the date of commencement of commercial operation of the project, which reduction increases overhead construction costs assignable to the project in the amount of $12,536.60; and (8) inclusion of general equipment transferred to the project and recorded upon Licensee's books of account but erroneously omitted from claimed project costs, in the amount of $2,291.50.

The net amount of $21,951.11 proposed to be eliminated from recorded cost of project changes for the period from August 1, 1954, through December 31, 1957, results from (1) elimination of a claim associated with non-project land in the amount of $21,130.81; and (2) elimination of a claim associated with Washington State sales tax applicable to the Licensee's Project No. 935 (Merwin), in the amount of $820.30.

The accounting disposition of the amounts involved in all of the proposed adjustments totalling $944,359.83 is shown by the following journal entry:

Numbers		Accounts	Debit	Credit
Old	New			
100.1	101	Electric plant in service:		
		Project No. 935	$1,418.03	
		Project No. 2111	597.72	
		Nonproject (Oregon General)	312.50	
110	121	Nonutility property	26,290.17	
142	183	Preliminary survey and investigation charges	597.72	
250.1	108	Accumulated provision for depreciation of electric plant in service—Project No. 2071.	50,465.05	
251.1	111	Accumulated provision for amortization of electric plant in service.	50.49	
271	216	Unappropriated earned surplus	868,893.30	
503	403	Depreciation expense		$4,265.15
100.1	101	Electric plant in service—Project No. 2071		[1] 944,359.93

[1] The debit adjustment to claimed project cost as of July 31, 1954, in the amount of $2,291.50, represents a recorded cost. No book entry is required to adjust for that amount.

After giving effect to the above adjustments, the Commission's staff recommends and Licensee's representatives concur that the Commission determine: (1) the actual legitimate original cost of Project No. 2071 (Yale), as of July 31, 1954, to be $35,669,971.03; (2) the net addition or change in project cost for the period from August 1, 1954, through December 31, 1957, to be $134,397.30, comprising gross additions of $32,774.84, gross retirements of $1,679.50, and debit adjustments of $103,301.96; and (3) the resulting actual legitimate original project cost as of December 31, 1957, to be $35,804,368.33; all classified by project plant accounts as shown in attached Schedule I.

The proposed recommended project costs include certain charges to Licensee for engineering and construction management services by Ebasco Services Incorporated, a part of which may be shown to represent intercompany profits which violate this Commission's rules prohibiting profits to affiliates. Therefore, the staff recommends that the determination of the cost of Project No. 2071 at this time be made subject to possible future adjustment to reflect all necessary changes by reason of any later Commission determination that part

of the charges to Licensee by Ebasco Services Incorporated represent such intercompany profits.

This Commission by letter dated June 1, 1962, requested comments of the Washington Public Service Commission as to the proposed adjustments and resulting project costs. By its letter dated June 14, 1962, the Washington Public Service Commission indicated no objection thereto.

The Commission finds:

(1) Licensee, by its agreement to the proposed adjustments including the accounting dispositions therefor and resulting project costs, and the Washington Public Service Commission, by its letter of June 14, 1962, have obviated the necessity for the notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions therefor, as shown by the above journal entry and the attached Schedule II are reasonable and appropriate for the purposes of the Federal Power Act, and therefore should be approved and directed as hereinafter provided.

(3) The actual legitimate original cost of Licensee's Project No. 2071 (Yale), as of July 31, 1954, is $35,669,971.03; the net addition or change in project cost for the period from August 1, 1954, through December 31, 1957, is $134,397.30, comprising gross additions of $32,774.84, gross retirements of $1,679.50, and debit adjustments of $103,301.96; and the resulting actual legitimate original cost of the project as of December 31, 1957, is $35,804,368.33; all classified by project plant accounts as shown in attached Schedule I.

(4) It is necessary and appropriate for purposes of the Federal Power Act, the Commission license for Project No. 2071 and the Commission's Uniform System of Accounts that the Commission reserve for future consideration determination of the matter of revision of Licensee's actual legitimate original cost of Project No. 2071, as herein determined, to reflect such further adjustments therein as may be necessary in the event that the portion of the cost of the project representing charges to Licensee by Ebasco Services Incorporated are determined to represent intercompany profits which violate this Commission's rule prohibiting profits to affiliates.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The adjustments, including the accounting dispositions therefor, as proposed by the staff and agreed to by the Licensee are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant accounts for Project No. 2071, showing a total debit balance of $35,669,971.03 as of July 31, 1954; the debit amount of $134,397.30 for the period of August 1, 1954, through December 31, 1957; and a total debit balance of $35,804,368.33 as of December 31, 1957, classified by project plant accounts as set forth in the attached Schedule I.

(D) Licensee shall file with the Commission, within 90 days from the issuance of this order, FPC Form No. 7 and three certified copies of the adjusting journal entries, showing compliance with this order.

(E) The actual legitimate original cost of Project No. 2071 as determined herein is expressly subject to revision as set forth in finding (4) above.

SCHEDULE I.—ACTUAL LEGITIMATE ORIGINAL COST AND NET CHANGES THEREIN

Account		Initial claimed cost as of July 31, 1954				Changes from Aug. 1, 1954, through Dec. 31, 1957			Total Allowed cost as of Dec. 31, 1957

PUGET SOUND POWER & LIGHT COMPANY, PROJECT NO. 2150

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL COST OF PROJECT (LOWER BAKER RIVER DEVELOPMENT) AND APPLICABLE INITIAL ACCRUED DEPRECIATION AND PRESCRIBING ACCOUNTING THEREFOR

(Issued January 8, 1963)

Puget Sound Power & Light Company, Licensee for Project No. 2150,[1] on May 28, 1957, filed a statement of initial project cost pursuant to Section 4.26 of the Commission's Regulations under the Federal Power Act, claiming, as of the effective date of the Commission's license, May 1, 1956, an actual legitimate original project cost (Lower Baker River development) in the amount of $6,944,496.24, an accrued depreciation applicable to in-service project properties in the amount of $499,513.00 as of that date and a resulting claimed net investment of $6,444,983.24.[2] That statement does not include claimed costs associated with the Upper Baker River development of the project.[3]

The Commission's staff made a field examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of those amounts. Following that study the staff, subject to Commission approval, proposed certain adjustments and accounting dispositions which were agreed to by Licensee's representatives. That agreement, reached prior to Commission approval of project boundaries of Project No. 2150, contemplates that a further examination of project cost, as herein recommended, will be completed hereafter to reflect any changes therein made necessary by reason of the Commission's approval of project boundaries on June 15 and October 1, 1962, Order Approving Project Exhibits and Prescribing Additional Annual Charges, and Order Modifying Commission Order and Adjusting Annual Charges, *Puget Sound Power & Light Company*, Project No. 2150.

The proposed adjustments so agreed upon reduce Licensee's claimed total cost of the Lower Baker River development as of May 1, 1956, by the net amount of $394,204.75.

The proposed eliminations from claimed cost of the Lower Baker River development consist of the following items:

---

[1] The project is located on the Baker River, a tributary of the Skagit River, in Whatcom and Skagit Counties, Washington. It may be described generally as the Baker River Project and consists of two developments, the Upper Baker River development and the Lower Baker River development. The license, issued June 4, 1956 (15 FPC 1496) pursuant to Section 4(e) of the Federal Power Act, as amended by Commission orders issued July 7 and August 23, 1960 (24 FPC 20, 326), authorized the construction, operation and maintenance of the Upper Baker River development, the installation of an additional 57,600 kw generating unit in the Lower Baker River development, and the continued operation and maintenance of the constructed Lower Baker River development. The license is by its terms effective for a period of 50 years, commencing May 1, 1956. By order issued November 4, 1960 (24 FPC 924), the Commission approved, among other things, the transfer of the license from Puget Sound Power & Light Company, a Massachusetts corporation, to Puget Sound Power & Light Company, a Washington corporation, effective November 16, 1960.

[2] Article 38 of the license provides for Commission determination, as of the effective date of the license, May 1, 1956, of the actual legitimate original cost of the parts of the project completed prior to such effective date, and the applicable reserve for depreciation; the difference being the net investment of Licensee in the project as of that date.

[3] Article 39 of the license provides for Commission determination of the actual legitimate original cost of portions of the project completed subsequent to the effective date of the license and of project additions and betterments.

Option on lands, engineering miscellaneous expense applicable to abandoned sites	$8,017.47
Property taxes outside the construction period	2,191.67
Property taxes applicable to non-project plant	649.25
Timber and clearing costs applicable to minor-part Project No. 777	10,110.74
Adjustment of construction power to cost	28,350.75
Adjustment of interest charges during construction	34,266.62
Maintenance and operating expenses improperly capitalized	26,852.67
Elimination of non-project facilities	280,453.85
Intercompany profit in Stone & Webster, Inc., engineering fees	3,311.73
Total	394,204.75

Agreement was also reached between Licensee's representatives and staff for the adjustment of Licensee's claimed accrued depreciation applicable to in-service project properties of the Lower Baker River development as of May 1, 1956, through a net increase of $152,714.00. This amount results from increasing accrued depreciation applicable to hydraulic production plant by $203,838.00 and eliminating accrued depreciation in the amount of $51,124.00 which is associated with transmission plant herein classified as a non-project facility as respects the Lower Baker River development.

In its examination of Licensee's books of account as of May 1, 1956, the staff found that the claimed cost of the Lower Baker River development exceeded the recorded or book cost thereof by $26,019.23. This excess is made up of the following items:

Transmission substation equipment booked as non-project, but included in claim	$28,717.92
Intrasite communication equipment booked as non-project, but included in claim	2,656.21
Credit adjustment of overheads booked, but not included in claim	42.04
Non-project log boom and metering equipment booked, but not included in claim	[1](190.99)
Non-project transmission roads and trails booked, but not included in claim	[1](5,205.95)
Total	26,019.23

[1] Denotes credit.

Accordingly, the adjustment required to conform Licensee's recorded cost of the Lower Baker River development to the recommended cost thereof is a credit amount of $368,185.52 (adjustment to claimed cost of $394,204.75 minus $26,019.23 the excess of claimed cost over book cost).

Also, the staff's examination of Licensee's books of account as of May 1, 1956, disclosed that the claimed accrued depreciation of the Lower Baker River developed exceeded the recorded accrued depreciation thereof by $10,968.00. Licensee's claimed reserve for depreciation applicable to in-service project properties included in the Lower Baker River development as of May 1, 1956, totals $499,513, whereas Licensee's depreciation reserves per books totals $488,545. The adjustment required to conform the recorded depreciation reserve of the Lower Baker River development to the recommended depreciation reserve is a credit amount of $163,682.00 (adjustment to claimed depreciation reserve of $152,714.00 plus $10,968.00, the excess of claimed over recorded reserve).

The proposed accounting dispositions of the amounts involved in the adjustments to bring Licensees recorded or book cost and accrued depreciation of the Lower Baker River development as of May 1, 1956, into agreement with the recommended cost and accrued depreciation of that development tentatively agreed to between the staff and Licensee's representatives are shown by the following composite journal entry:

Account number and title [1]		Details	Debits	Credits
100.1	Electric plant in service, project No. 2150			$368,185.52
	Project No. 2150			
320	Land and land rights	($87,590.95)		
321	Structures and improvements	(54,326.51)		
322	Reservoirs, dams, and waterways	(14,885.62)

250.1	Reserve for depreciation of electric plant in service:			
	Nonproject, distribution		163,682.00	
	Project No. 2150, production			163,682.00

[1] Account references are to account numbers and titles prescribed in the Commission's Uniform System of Accounts for Public Utilities and Licensees effective prior to Jan. 1, 1961. This reflects the fact that the cost of the Lower Baker River development of the project and the applicable reserve for depreciation herein determined are recorded in Licensee's plant accounts and depreciation accounts as of dates prior to Jan. 1, 1961.

After giving effect to the above proposed adjustments, the staff recommends and Licensee, by its letter and revised statement of claimed initial cost and accrued depreciation of the Lower Baker River development filed on May 31, 1962, confirming its agreement to the proposed adjustments, accounting dispositions, and resulting costs and accrued depreciation for that development, concurs that the Commission determine the actual legitimate original cost and initial accrued depreciation of the Lower Baker River development as of May 1, 1956, to be $6,550,291.49 and $652,227.00, respectively, resulting in a net investment of $5,898,064.49, all classified by primary accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, as shown in the attached schedule.

The Washington Utilities and Transportation Commission was advised by letter of this Commission of the proposed adjustments, accounting dispositions, and resulting costs and accrued depreciation of the Lower Baker River development, all as recommended by the staff and agreed to by Licensee as set forth above. By its letter dated June 15, 1962, that Commission indicated that it had no objection to the staff's recommendations.

The Commission finds:

(1) Licensee, by its tentative agreement and its revised statement of claimed initial cost and accrued depreciation of the Lower Baker River development of Project No. 2150 filed May 31, 1962, and the Washington Utilities and Transportation Commission, by its letter dated June 15, 1962, with respect thereto, have obviated the necessity for notice and opportunity to protest provided by Sections 4.22 and 4.23 of this Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting disposition of all amounts involved therein, are reasonable and appropriate for the purposes of the Federal Power Act, and therefore should be approved and directed as hereinafter provided.

(3) The actual legitimate original cost of the Lower Baker River development of Project No. 2150 as of May 1, 1956, the effective date of the license for the project, is $6,550,291.49 (subject to future examination by reason of Commission approval of project boundaries) and accrued depreciation applicable to in-service project properties of that development of the project as of that date is $652,227.00, resulting in a net investment as of that date of $5,898,064.49, all classified by primary accounts as shown by the attached schedule.

The Commission orders:

(A) The provisions of Sections 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, including the accounting disposition of all amounts involved therein, as proposed by the staff and agreed to by Licensee, are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain (a) control and detailed accounts for Project No. 2150 showing the total debit balance of $6,550,291.49 as the actual legitimate original cost (subject to future examination by reason of Commission approval of project boundaries) of the Lower Baker River development of the project as of May 1, 1956, classified by primary accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees; and (b) a reserve for depreciation applicable to in-service project properties of the Lower Baker River development of Project No. 2150 showing the total credit balance of $652,227.00 as of May 1, 1956; resulting in a net investment of $5,898,064.49 in the Lower Baker River development of Project No. 2150 as of May 1, 1956, all as shown in the attached schedule.

(D) Licensee shall within 90 days from the issuance of this order file with the Commission FPC Form No. 7 and three certified copies of its adjusting journal entries showing compliance with this order.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-53

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 8, 1963)

On September 4, 1962, Southern Natural Gas Company (Applicant) filed in Docket No. CP63-53 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a line tap and a meter and regulator station on Applicant's Yates branch line, Carroll County, Georgia, and the sale and delivery of natural gas at such new delivery point to Atlanta Gas Light Company (Atlanta Gas), an existing customer, for resale and distribution by the latter in the City of Whitesburg, Georgia, all as more fully set forth in the application.

The estimated cost of Applicant's proposed facilities is $14,000, which cost will be financed from cash on hand or from funds available from current operations.

Atlanta Gas will construct and operate a distribution system in Whitesburg and a lateral line from Whitesburg to Applicant's proposed facilities. The initial cost of these facilities is estimated to be $44,000.

The estimated third year maximum daily and annual requirements of Whitesburg are 200 Mcf and 19,565 Mcf, respectively.

Applicant states that Atlanta Gas has received appropriate authorizations from Whitesburg and the Georgia Public Service Commission.

Pursuant to due notice, a public hearing was held in Washington, D.C., on December 18, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's com-

pliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Southern Natural Gas Company, to construct and operate the proposed facilities and to sell and transport natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within two months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SUN OIL COMPANY, DOCKET NO. G–6650; SOUTH-TEX CORPORATION (OPERATOR), ET AL. (FORMERLY SUN OIL COMPANY), DOCKET NO. RI62–418; SOUTH-TEX CORPORATION, DOCKET NO. RI62–419; ASSOCIATED OIL & GAS COMPANY, DOCKET NO. RI62–420

ORDER DENYING APPLICATION FOR REHEARING

(Issued January 8, 1963)

On December 10, 1962, Sun Oil Company (Sun) filed an application for rehearing of the Commission's order issued November 9, 1962, 28 FPC 802, in the above-designated proceedings. By that order, we accepted a rate filing tendered by South-Tex Corporation (Operator), *et al.* (South-Tex), as operator of the processing plant where Sun's gas is processed, to supersede a previous filing by Sun, a non-signatory non-operator co-owner, and South-Tex was substituted for Sun in the rate suspension proceeding in Docket No. RI62–418. Further, Sun's certificate of public convenience and necessity, issued in Docket No. G–6650, was vacated, and the show cause proceedings against South-Tex and Associated Oil & Gas Company (Associated) were terminated.

The controversy herein arose between Sun and South-Tex since Sun, a non-signatory to the gas sales contract, was prohibited from filing a proposed increased rate pursuant to the provisions of Section 154.91(d) of the Commission's Regulations under the Natural Gas Act, and South-Tex, the operator, refused to file for Sun's interest. In order to protect Sun, the Commission in its May 11, 1962 order accepted for filing Sun's proposed rate and suspended it

for one day in Docket No. RI62–418, 27 FPC 940.[1] The said order also instituted show cause proceedings against South-Tex in Docket No. RI62–419 and Associated[2] in Docket No. RI62–420 to determine, *inter alia*, why either South-Tex or Associated, as an operator who is a signatory party to the gas sales contract, should not make rate filings for Sun, a non-signatory co-owner.

On October 12, 1962, South-Tex filed, on behalf of Sun only, a notice of change dated October 10, 1962, (designated Supplement No. 27 to South-Tex Corporation (Operator), *et al.* FPC Gas Rate Schedule No. 1) requesting that the increased rate of 17.24347¢ per Mcf, which was being collected, subject to refund, by Sun under Docket No. RI62–418, be collected by South-Tex as operator under the subject gas sales contract. In view thereof, the Commission on November 9, 1962, issued the order here complained of.

In support of its application for rehearing, Sun states, *inter alia*, that (1) Sun is a signatory party to the contract with Tennessee to the same extent that South-Tex and Tennessee are signatory parties; (2) South-Tex has no interest in the sale of Sun's gas and is not required to make filings on Sun's behalf; (3) Because it has no interest in Sun's gas, South-Tex is not a proper respondent in the proceeding in Docket No. RI62–418; (4) Order No. 190 (by which Section 154.91(d) was promulgated) cannot be used as a means of depriving Sun of its contract prices, citing *Mississippi River Fuel Corp.* v. *FPC;*[3] and (5) Order No. 190, as applied in this case, cannot be justified on the grounds of administrative ease or convenience.

Sun's assertion that it is a signatory party to the gas purchase contract between South-Tex and Tennessee rests according to Sun's own assertions on the mere fact that South-Tex and Sun executed an agreement whereby Sun authorized South-Tex to sell and deliver its gas to Tennessee[4] pursuant to the terms of the contract between South-Tex and Tennessee. But, the effect thereof was simply to make South-Tex the agent for Sun. Tennessee was not a party to that contract. Sun's action, therefore, does not give Sun signatory status with respect to the gas purchase contract between South-Tex and Tennessee. Moreover, the position of Sun is not in any way similar to the status of South-Tex and Tennessee, as claimed by Sun, for both South-Tex and Tennessee are by succession, signatory parties to the subject sales contract.[5]

In claiming that South-Tex is not a proper respondent in Docket No. RI62–418, Sun seems to be anticipating possible injury to its interests. The Fifth Circuit Court of Appeals in *Sun Oil Company* v. *F.P.C.*, 256 F. 2d 233, rejected the same contentions made by Sun under similar circumstances to those presented here. There the court stated (256 F. 2d 233 at 240):

> It is not shown that the ruling has been or that it will be the means by which the substantial rights of the owners of gas, the sale of which is subject to

[1] Sun's proposed increased rate, from 12.12268¢ to 17.24347¢ per Mcf, designated as Supplement No. 10 to Sun Oil Company's FPC Gas Rate Schedule No. 31, was suspended until May 14, 1962, at which time it became effective subject to refunding obligations assured by Sun's filing of its agreement and undertaking.

[2] In its application for rehearing filed on April 12, 1962 in Docket No. G–6650, Sun stated that it "believes" Associated has succeeded to the interest of South-Tex.

[3] 202 F. 2d 899.

[4] Under the agreement South-Tex would process all of the gas produced from Sun's E. M. Brownlee Lease, Nueces County, Texas and would deliver to Tennessee the quantity of residue gas equal to 95% of the daily quantity of gas delivered by Sun to South-Tex.

[5] Both Tennessee and South-Tex at the time of their respective successions executed amendments to the gas purchase contract with the then seller and buyer, respectively, specifically approving of the substitution of ownership.

regulations, will be adversely affected. We are unwilling to assume that the operators will advance their own interests to the prejudice of a non-operator co-owner. We do not believe that Sun will be without notice or knowledge of any proposed action which might affect its interests. We do not have any fear that the Commission will abuse its discretion by denying Sun the right to intervene in any proceeding where its rights of substance are involved and might be prejudiced if it were deprived of the right to participate. We cannot see that Sun is deprived of any contractual right reserved to it under the operating agreements. * * *

In this regard we point out that the purpose of the Commission's order of May 11, 1962, was to assure that Sun would not be deprived of its contractual rights. Thus, when South-Tex refused to file for Sun, we permitted Sun to make its own rate filing even though under the provisions of Order No. 190 as a non-signatory party to the sales contract Sun was not authorized to file. After South-Tex made the necessary filings to cover Sun's interest herein, there was no longer any reason for permitting Sun's rate filing. Accordingly, in the order of November 9 our prior action of May 11 was vacated. Under the present circumstances there is no reason to believe that Sun's fears will materialize, but in the event they do so, Sun may, of course, request the Commission to again take appropriate action to insure the protection of its rights.

The *Mississippi* case cited by Sun is not applicable to the present situation. In that case the court held that the Commission could not without a hearing reject a rate filing of a pipeline company, which the court held met all of the formal filing requirements, on the ground that a portion of the increase was unjustified because based upon expected increased gas purchase costs not yet requested by its supplier. However, in the instant case Sun's filing was originally rejected because under Order No. 190, as a non-signatory party, Sun was not entitled to make a rate filing. Thus, Sun did not comply with the prescribed filing requirements.

The remaining contentions advanced by Sun with respect to the validity of Order No. 190 were disposed of by the court in *Sun Oil Company* v. *F.P.C.*, 256 F. 2d 233. In that case the court approved the Commission's action of vacating Sun's certificate authorizations and rescinding its rate schedules in those instances where, as here, Sun was not a signatory party to the sales contract, and was adequately covered by the filings of the signatory party to such contract. The mere fact that South-Tex initially would not file for Sun does not in our view warrant permanent relaxation of the provisions of Order No. 190 in this case. Inasmuch as South-Tex has now filed for Sun there is no longer need or justification for allowing Sun to file its own rate schedule.

The Commission finds:

The assignments of error and grounds for rehearing set forth in Sun's application for rehearing present no new facts or principles on law which were not considered by the Commission when it issued its order of November 9, 1962, or which having now been considered warrant any change or modification of said order.

The Commission orders:

The application for rehearing filed by Sun Oil Company on December 10, 1962, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Harold C. Woodward.

INTERIM ACCOUNTING TREATMENT OF INVESTMENT TAX CREDIT UNDER 1962 AMENDMENTS TO INTERNAL REVENUE CODE BY PUBLIC UTILITIES, LICENSEES, AND NATURAL GAS PIPELINE COMPANIES, DOCKET NO. R-231

ORDER NO. 261

ORDER PRESCRIBING INTERIM ACCOUNTING FOR INVESTMENT TAX CREDIT

(Issuing January 9, 1963)*

The Commission has under consideration in this matter the accounting disposition by public utilities, licensees and natural gas companies of the tax credit for investment in certain depreciable property (investment tax credit) provided under section 2 of the Internal Revenue Act of 1962 (26 USC 38).

By letter of the Secretary of December 11, 1962, natural gas pipeline companies were advised that in the absence of any amendment to the Uniform System of Accounts they should account for the investment tax credit by use of Account 409, Income Taxes, to reflect the actual taxes paid. That letter also made clear that the Commission had reached no final determination as to how the investment credit should be accounted for and that the Commission reserved the right to make subsequent accounting adjustments should it later determine a different accounting treatment more appropriate.

After further consideration the Commission has concluded that there is no adequate basis at this time for requiring the sole use of Account 409 as provided in the Secretary's letter of December 11, 1962. There is considerable disagreement among accountants, industry representatives, and other experts as to the proper accounting disposition of the investment tax credit. The Commission believes that it must give careful consideration to all of the possible accounting dispositions of the investment tax credit before prescribing a permanent accounting requirement under its Uniform System of Accounts. A rulemaking proceeding to accomplish this is contemplated in the near future. However, in view of the fact that public utilities, licensees and natural gas companies must soon close their books for 1962 and the further fact that this Commission has not finalized its accounting requirements for the investment tax credit, it is necessary and proper for the Commission to order, effective immediately, interim accounting requirements which will allow the companies to close their books for 1962, but which will hold in suspense for future Commission consideration the final accounting disposition of the tax credit amounts.

The accounting disposition which the public utilities, licensees and natural gas companies will be required to follow with respect to the investment tax credit during this interim period is as follows:

(1) Credit Account No. 253, Other Deferred Credits, in the full amount of the investment tax credit allowed;

(2) Debit Account No. 426, Other Income Deductions, in a corresponding amount.

The effect of this accounting treatment will be to reflect actual taxes paid in Account 409, Income Taxes, and yet not to reflect any change in net income as a result of the investment tax credit.

Upon final determination by the Commission of permanent accounting requirements for the investment tax credit, the companies will be required by the Com-

*Published in the Federal Register on January 16, 1963 (28 F.R. 402).

Order issued January 23, 1964, extending Interim Accounting Treatment prescribed here. 31 FPC 175.

mission to adjust their accounts and any filings made under this interim accounting procedure to conform with the procedure established after opportunity for hearing.

In view of the fact that public utilities, licensees and natural gas pipeline companies must soon close their books for 1962, companies would be prejudiced by any delay in the issuance of this order prescribing temporary accounting for the purpose of permitting them to close their books. Therefore, to postpone issuance of this order until after issuance of notice and the elapse of the prescribed time would be impracticable and contrary to the public interest, and the notice requirements of Section 4(a) of the Administrative Procedure Act (5 U.S.C. 1003; 60 Stat. 238) do not apply.

The Commission finds:

(1) Notice and opportunity to comment in this rulemaking proceeding with respect to the matters presently before the Commission is not required by Section 4 of the Administrative Procedure Act by reason of the fact that notice would be impracticable and contrary to the public interest for the reasons set forth above.

(2) In view of the foregoing, and upon consideration of all relevant matters presented, it is necessary and appropriate for purposes of the Federal Power Act and the Natural Gas Act that the investment tax credit be treated for accounting purposes by public utilities, licensees, and natural gas pipeline companies as follows, pending final determination by the Commission of permanent accounting disposition therefor:

(a) Credit Account No. 253, Other Deferred Credits, in the full amount of the investment tax credit allowed;

(b) Debit Account No. 426, Other Income Deductions, in a corresponding amount.

(3) In view of the facts set out above, good cause exists that this revision be effective as of the date of the issuance of this order.

The Commission, acting pursuant to the authority granted by the Federal Power Act, particularly sections 301, 304, and 309 thereof (49 Stat. 854, 855, 858; 16 U.S.C. 825(a), 825c(a) and 825h) and by the Natural Gas Act, particularly sections 8, 10 and 16 thereof (52 Stat. 825, 826, 830; 15 U.S.C. 717g, 717i and 717o) *orders:*

(A) In closing their books of account for calendar year 1962 and in accounting for income taxes until further notice, all public utilities, licensees, and natural gas pipeline companies subject to the jurisdiction of this Commission under the Federal Power Act and the Natural Gas Act shall account for the investment tax credit provided under section 2 of the Internal Revenue Act of 1962 (26 U.S.C. 38) as follows:

(1) Credit Account No. 253, Other Deferred Credits, in the full amount of the investment tax credit allowed;

(2) Debit Account No. 426, Other Income Deductions, in the full amount of the investment tax credit allowed.

(B) All public utilities, licensees, and natural gas pipeline companies will be required subsequently to adjust their accounts and to revise any filings submitted to this Commission on the basis of the interim accounting prescribed herein, to meet permanent accounting requirements for the investment tax credit subsequently to be prescribed by this Commission.

(C) This order shall be effective upon the date of issuance thereof.

(D) The Secretary of the Commission shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. CP63-80

ORDER DENYING INTERVENTION

(Issued January 11, 1963)*

The above-entitled proceeding concerns an application of Midwestern Gas Transmission Company (Midwestern) for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities for the purpose of testing and evaluating three proposed storage fields located in Illinois.

On December 31, 1962, George F. Toney, *et al.*[1] (Petitioners) filed a petition to intervene in this proceeding. Petitioners claim that (1) they own substantial property interests in one of the three proposed storage fields to be tested and evaluated, namely the Elbridge Field, Edgar County, Illinois, (2) they have an interest which is directly affected by the proposed testing, which interest is not adequately represented by the existing parties, and (3) the proposed testing and evaluating of the Elbridge Field by Midwestern is not necessary or desirable in the public interest.

On January 7, 1963, Midwestern filed an answer in opposition to the subject petition to intervene. In its answer Midwestern states, among other things, that the subject petition to intervene does not comply with Section 1.8 of the Commission's Rules of Practice and Procedure in that no facts are set forth to show that intervention by Petitioners is necessary or appropriate to the administration of the Natural Gas Act or that Petitioners' participation may be in the public interest. Midwestern claims that Petitioners' only alleged direct interest in this proceeding is based entirely upon alleged property interests in the Elbridge Field. Midwestern further claims that Petitioners' alleged property interests have been and will be fully protected by the laws of the State of Illinois and the proper local forum having jurisdiction of such matters and being endowed with eminent domain powers. Midwestern states further that Petitioners' only other interest in this proceeding is a professed desire that the application be disposed of in the manner required by the public convenience and necessity, coupled with unsupported allegations that the proposed storage project is not in the public interest.

The only issue of fact or law which Petitioners would raise pertains to their claimed property interests. Thus Petitioners seem erroneously to have assumed that we have power either to dispose or adjudicate the extent of their property interests. We cannot by issuing a certificate confer upon Midwestern the powers to condemn Petitioners' property rights and are not called upon in this certificate proceeding to determine the extent of Petitioners' ownership. Even if Midwestern was issued a certificate, its enjoyment of it will depend on its securing and/or quieting all necessary title through judicial proceedings. Our action in denying intervention here is in accord with our past actions which

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NOS. G–11980, G–17166, AND G–19983

ORDER AMENDING ORDER APPROVING RATE SETTLEMENT, PRESCRIBING REFUNDS AND TERMINATING PROCEEDINGS

(Issued January 11, 1963)

By order issued December 21, 1962, 28 FPC 1100, the Commission approved a settlement in the above listed rate proceedings. Pursuant to that order and as provided in the Stipulation and Agreement identified as Exhibit 6 in these proceedings, the settlement was made applicable to all parties except Pennsylvania Gas and Water (Penn. Gas & Water) which had objected to the settlement.

On January 7, 1963, Penn. Gas & Water filed a letter with the Commission requesting that the Commission issue a supplemental order making the December 21, 1962, order applicable to it.

The Commission finds:

It is in the public interest that the settlement, heretofore approved as to all other parties in the above listed proceedings be made applicable to Penn. Gas & Water.

The Commission orders:

(A) The order issued December 21, 1962, in the above listed proceedings is hereby modified and amended to eliminate therefrom those parts of paragraphs (2) and (3) of the Commission's findings (page 11) and paragraphs (A), (B), (C), and (G) (pages 11 and 12) which except the application thereof to Pennsylvania Gas and Water Company, and the settlement therein approved is hereby made applicable to that company.

(B) The pre-hearing conference in these dockets scheduled to convene on January 22, 1963, is hereby cancelled.

(C) Except to the extent hereinabove modified, the order issued December 21, 1962, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NOS. G–1895 AND G–11080

FINDINGS AND ORDER AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 14, 1963)

On July 27, 1962, El Paso Natural Gas Company (Applicant) filed in Docket Nos. G–1895 and G–11080 an application to amend the orders in said dockets issued April 4, 1952 (11 FPC 936), and January 9, 1958 (19 FPC 78), respectively, to delete therefrom the quantity restrictions applicable to maximum daily and annual deliveries of natural gas to Arizona Public Service Company (Arizona) and El Paso Natural Gas Products Company (Products Company), all as more fully set forth in the application to amend.

In Docket No. G–1895, Applicant was authorized to construct and operate certain facilities and to sell and deliver up to 3,502,000 Mcf of gas annually and up to 12,000 Mcf of gas per day to Arizona for resale to Salt River Project Agricultural Improvement and Power District[1] for use in its Kyrene Power Plant located in Maricopa County, Arizona. In anticipation of future periodic abnormal loading of the Kyrene plant such as that which occured during the calendar year 1961, Applicant requests that the quantity restrictions on deliveries to Arizona be removed.

In Docket No. G–11080 Applicant was authorized, among other things, to deliver up to 1,230 Mcf of gas to Products Company for use in its Ciniza Refinery and Wingate and Bisti Pumping Stations. Applicant and Products Company have entered into an agreement amending the basic agreement regarding daily volumes in Mcf as follows:

	Original agreement	Amended agreement
Ciniza refinery	1,100	5,000
Wingate pumping station	100	100
Bisti pumping station	30	50
Total	1,230	5,150

The amended agreement reflects the customer's requirements as demonstrated during the calendar year 1961, and accordingly Applicant requests that the quantity restriction on deliveries to Products Company be removed.

The orders in the subject dockets will be amended to increase the maximum daily delivery restriction to Products Company from 1,230 Mcf to 5,150 Mcf of gas and to increase the maximum daily delivery restriction to Arizona from 12,000 Mcf to 25,000 Mcf of gas which Applicant's 1961 experience has shown to be necessary. Sufficient reasons have not been submitted to warrant the removal of the annual volume limitation on the sale to Arizona, and so said limitation shall remain unchanged.

Notice of the filing of the application to amend was issued November 16, 1962, and published in the Federal Register on November 24, 1962 (27 FR 11571). No protest, request for hearing, or petition to intervene has been received.

[1] Formerly Salt River Valley Water Users Association.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and required by the public convenience and necessity that the orders in Docket Nos. G–1895 and G–11080 should be amended to restrict the maximum daily deliveries of natural gas by Applicant, El Paso Natural Gas Company, to Arizona Public Service Company for resale to Salt River Project Agricultural Improvement and Power District to 25,000 Mcf, and to El Paso Natural Gas Products Company for use in the Ciniza Refinery and Wingate and Bisti Pumping Stations to 5,150 Mcf.

The Commission orders:

(A) The orders in Docket Nos. G–1895 and G–11080 be and the same are hereby amended to restrict maximum daily deliveries of natural gas by Applicant, El Paso Natural Gas Company, to Arizona Public Service Company for resale to Salt River Project Agricultural Improvement and Power District to 25,000 Mcf, and to El Paso Natural Gas Products Company for use in the Ciniza Refinery and Wingate and Bisti Pumping Stations to 5,150 Mcf.

(B) In all other respects, said orders shall remain unchanged and in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Howard C. Woodward.

THE EMPIRE DISTRICT ELECTRIC COMPANY, PROJECT NO. 2221

ORDER DETERMINING NET INVESTMENT; ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND NET CHANGE THEREIN; ACCRUED DEPRECIATION; AND PRESCRIBING ACCOUNTING THEREFOR

(Issued January 14, 1963)

The Empire District Electric Company, Licensee for Project No. 2221,[1] on May 25, 1959, filed its statement of project cost pursuant to Sections 4.1 and 4.20 of the Commission's Regulations under the Federal Power Act, claiming as of September 1, 1958, an actual legitimate original cost of Project No. 2221 in the total amount of $2,559,351.88; accrued depreciation applicable to inservice project properties as of that date in the amount of $963,817.68; and a resulting net investment of Licensee in the project in the amount of $1,595,534.20 as of that date.[2] In addition, Licensee's books and records show for the period from September 1, 1958, through December 31, 1960, a net increase in project cost of $49,735.06, resulting in a total claimed or recorded actual legitimate original cost of the project as of December 31, 1960, of $2,609,086.94. The recorded net increase of $49,735.06 in the cost of the project for that period results from recorded project gross additions of $77,126.99 and gross retirements of $27,391.93.

---

[1] The project is located on the White River in Taney County, Missouri, in the vicinity of Forsyth and Branson, Missouri, and is known as the Ozark Beach Project. The license, authorizing the operation and maintenance of the constructed project, was issued (pursuant to Section 4(e) of the Federal Power Act) for a period of 10 years, commencing September 1, 1958.

[2] Article 13 of the license and Section 4 of the Federal Power Act provide that the Commission shall determine the actual legitimate original cost of the project and accrued depreciation applicable thereto as of the effective date of the license, and that such cost less such accrued depreciation, so determined, shall be the net investment in the project as of such effective date. These provisions also apply to changes in the actual legitimate original cost and related depreciation thereafter.

During the period from September 1, 1958, through December 31, 1960, Licensee also recorded upon its books of account entries in its depreciation reserve account for the project in the net credit amount of $101,954.36, making a balance in that account of $1,065,772.04 as of December 31, 1960.

The Commission's staff made a field examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the foregoing amounts. Following that study an agreement, subject to Commission approval, was reached between the staff and Licensee's representatives with respect to certain adjustments involving (1) the elimination of the net amount of $322,523.70 from claimed and recorded project cost as of September 1, 1958; (2) net decrease in the claimed and recorded project reserve for depreciation of $146,360.23 as of September 1, 1958, and $15,392.56 in the period from September 1, 1958, through December 31, 1960, for a total decrease of $161,752.79 as of December 31, 1960, all resulting from the staff's aforesaid proposed adjustments; and (3) the accounting dispositions of all amounts involved in the proposed adjustments. The staff proposes no adjustments to the recorded cost of project plant changes for the period from September 1, 1958, through December 31, 1960.

The proposed eliminations from claimed project cost are associated with the following items:

War Department permit obtained by predecessor of Licensee	($5,091.57)
Flood damages improperly capitalized	(5,600.00)
Duplicate project survey	(3,060.60)
Dwelling transfer to non-utility plant	(8,223.04)
Substation equipment and overhead transfer to non-project plant	(126,670.26)
Various maintenance costs capitalized	(160,243.53)
Various unrecorded retirements	(13,584.70)
Portion of easement cost set aside through litigation	(50.00)
Total	(322,523.70)

The accounting disposition of amounts included in the proposed adjustments required to bring the recorded project costs and accrued depreciation into agreement with the staff recommended amounts as of December 31, 1960, all as tentatively agreed to between Licensee and staff, is shown by the following composite journal entry:

		Debit	Credit
Account 101	Electric plant in service: [1]		
	Project No. 2221		$322,523.70
	Nonproject	$126,670.26	
Account 108	Accumulated provision for depreciation of electric plant in service:		
	Project No. 2221	161,752.79	
	Nonproject		79,079.44
Account 121	Nonutility property	8,223.04	
Account 122	Accumulated provision for depreciation and amortization of nonutility property.		2,151.79
Account 262.1	Injuries and damages reserve	4,000.00	
Account 435	Miscellaneous debits to surplus	103,108.84	

[1] Account references are to account numbers and titles prescribed in the Commission's revised Uniform System of Accounts for Public Utilities and Licensees effective Jan. 1, 1961, except account references in attached Schedule I, which are to account numbers and titles prescribed in the Commission's Uniform System of Accounts effective prior to Jan. 1, 1961. This reflects the fact that the project costs herein determined are recorded in Licensee's plant accounts as of dates prior to Jan. 1, 1961.

Licensee in concurring in the staff recommendations also proposes to continue the annual depreciation rates which it has applied to depreciable project

properties since January 1, 1953, unless reductions therein are approved by this Commission. Those depreciation rates are as follows:

Account No.	Account	Percentage
331	Structures and improvements	1.7
332	Reservoirs, dams, and waterways	1.5
333	Water wheels, turbines, and generators	2.5
334	Accessory electric equipment	2.9
335	Miscellaneous power plant equipment	3.0
353	Station equipment	3.1

After giving effect to the adjustments referred to above, the staff recommends and Licensee concurs that the Commission determine: the project cost, reserve for accrued depreciation applicable to inservice project properties and resulting net investment of Licensee in Project No. 2221 as of September 1, 1958; net change in project cost and reserve for project accrued depreciation for the period from September 1, 1958, through December 31, 1960; and resulting project cost and reserve for project accrued depreciation as of December 31, 1960; all as more fully set forth in the numbered findings below.

By letters dated January 22 and May 17, 1962, Licensee confirmed its agreement with the staff's proposed adjustments, accounting dispositions and resulting project costs and reserves for accrued depreciation applicable to inservice project properties as described above.

The Missouri Public Service Commission was advised by letter of this Commission dated July 26, 1962, of the proposed adjustments, accounting dispositions, and resulting project costs and reserves for accrued depreciation. By undated letter received August 3, 1962, that Commission indicated that it had no objection thereto.

The Commission finds:

(1) Licensee, by its tentative agreement to the staff recommendations herein evidenced by its letters dated January 22 and May 17, 1962, and the Missouri Public Service Commission, by its letter received August 3, 1962, have obviated the necessity for notice and opportunity to protest provided by Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments including the accounting disposition of all amounts involved therein are reasonable and appropriate for the purposes of the Federal Power Act and therefore should be approved and directed as hereinafter provided.

(3) As of the effective date of the license, September 1, 1958, the actual legitimate original cost of Project No. 2221 is $2,236,828.18; the reserve for accrued depreciation applicable to inservice project properties is $817,457.45; and the resulting net investment of Licensee therein is $1,419,370.73.

The net increase or change in the actual legitimate original cost of Project No. 2221 for the period from September 1, 1958, through December 31, 1960, is $49,735.06, consisting of gross project additions of $77,126.99 and project retirements of $27,391.93. The net increase or change in the reserve for accrued depreciation applicable to inservice project properties of Project No. 2221 for the period from September 1, 1958, through December 31, 1960, is $86,561.80.

The actual legitimate original cost of Project No. 2221, as of December 31, 1960, is $2,286,563.24; and the reserve for accrued depreciation applicable to inservice project properties of Project No. 2221 as of that date is $904,019.25; all as more specifically set forth in the attached Schedules I and II.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that Licensee be directed to make provision for annual depreciation of de-

preciable inservice project properties of Project No. 2221 at rates not less than the depreciation rates set forth in the recital above, unless otherwise ordered by this Commission.

The Commission orders:

(A) The provisions of Section 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments including the accounting disposition of all amounts involved therein as proposed by the staff and agreed to by the Licensee are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall (a) establish and maintain control and detailed project plant accounts for Project No. 2221, showing the debit balance of $2,236,828.18 as of September 1, 1958; the debit amount of $49,735.06 as the net increase or change in project plant accounts during the period from September 1, 1958, through December 31, 1960; and the total debit balance of $2,286,563.24 as of December 31, 1960; all as more specifically shown by primary plant accounts as set forth in the attached Schedule I; and (b) establish and maintain a reserve account for accrued depreciation for Project No. 2221 showing the credit balance of $817,457.45 as of September 1, 1958; the credit amount of $86,561.80 as the net increase or change in the reserve for accrued depreciation applicable to inservice project properties for the period from September 1, 1958, through December 31, 1960; and the credit balance of $904.019.25 as of December 31, 1960; all classified by functional groups as shown in the attached Schedule II.

(D) Licensee shall within 90 days from the date of issuance of this order file FPC Form No. 7 and three certified copies of its journal entries showing compliance therewith.

(E) Licensee shall make provision for annual depreciation of depreciable inservice project properties of Project No. 2221 at rates not less than the depreciation rates set forth in the recital above, unless otherwise ordered by this Commission.

SCHEDULE I.—THE EMPIRE DISTRICT ELECTRIC COMPANY, PROJECT NO. 2221, MISSOURI-OZARK BEACH ACTUAL LEGITIMATE ORIGINAL COST

Account No.	Accounts	Claimed cost Sept. 1, 1958	Staff adjustments	Allowed cost as adjusted Sept. 1, 1958	Allowed cost of net additions Sept. 1, 1958-Dec. 31, 1960, as recorded	Allowed project cost Dec. 31, 1960
	Hydraulic production plant

HURLEY OIL AND GAS COMPANY, DOCKET NO. G–17775

ORDER DENYING MOTION OF NEW YORK TO ANNUL TEMPORARY CERTIFICATE, ETC., DENYING NEW YORK'S APPLICATION FOR REHEARING, VACATING THE COMMISSION'S LETTER ORDER OF JUNE 29, 1960, REINSTATING LETTER OF MARCH 11, 1959, AND REFERRING HURLEY'S MOTION FOR REMOVAL OF PRICE REFUND CONDITION TO PRESIDING EXAMINER FOR DECISION AS PART OF INITIAL DECISION

(Issued January 14, 1963)*

On November 8, 1962, the Public Service Commission of the State of New York (New York), filed an application for rehearing and reconsideration of a claimed denial of its motion to annul a temporary certificate of public convenience and necessity issued to the Hurley Oil and Gas Company (Hurley) on March 11, 1959 and which has been effective since that date. New York filed its motion on September 18, 1962 and assumed, since it wasn't expressly acted upon by the Commission, that it was automatically denied within 30 days by operation of Section 1.12(e) of the Commission's Rules of Practice and Procedure. Upon this assumed denial, New York filed pursuant to Section 19(a) of the Natural Gas Act and Section 1.34 of our Rules the application for rehearing we are now considering. On December 6, 1962, 28 FPC 946, we granted rehearing in order to afford further time for consideration of the issues raised. Inasmuch as New York incorporates the contents of its motion in its application for rehearing, and in fact makes no new contentions, we shall make a joint disposition of them both.

New York raises the following contentions in its pleadings: (1) that the Commission should annul, *ab initio*, the temporary certificate issued to Hurley

* Reconsideration denied by order issued March 4, 1963, 29 FPC 417.

because no emergency conditions existed as defined within the scope of Section 7(c) of the Natural Gas Act as interpreted by the United States Court of Appeals in *Algonquin Gas Transmission Co.* v. *F.P.C.*, 201 F. 2d 334 (CA 1, 1953); (2) that Hurley's Rate Schedule No. 8 (the contract underlying the certificate) should be cancelled; (3) that Hurley should be directed to terminate deliveries under Rate Schedule No. 8; and (4) that Hurley should be directed to refund all amounts of money collected for gas sold pursuant to the temporary certificate in excess of 20¢ per Mcf.

Hurley produces natural gas from a single well located in the Vacherie Field in St. James Parish, Southern Louisiana. On February 4, 1959, Hurley filed an application for a certificate of public convenience and necessity and at the same time invoked Section 157.28 of the Regulations under the Natural Gas Act to sell gas to Transcontinental Gas Pipe Line Corporation for a total initial price of 23.05¢ per Mcf, of which 2.05¢ was for reimbursement to Hurley for taxes paid to the State of Louisiana. Hurley's bases for invoking the emergency provision for the sale of gas, and upon which the letter order—temporary certificate issued on March 11, 1959, were that shut-in royalty payments had been made for four years prior to its application and an anticipated payment of an additional $5,250.00 also would be due unless a temporary issued, all of which resulted in an economic hardship on the applicant. Also, Hurley pleaded that the adjoining landowner, a sugarcane grower, granted a right of way with a provision that the gathering line to Transcontinental's facilities be constructed within six months.

The issuance of the temporary certificate was specifically conditioned upon "* * * Hurley refunding to Transcontinental any amounts in excess of the amount resulting from the rate finally determined to be proper in Docket No. G-17775." Hurley accepted the conditioned certificate on March 18, 1959, but moved, on May 12, 1960 that the refund provision be deleted from the temporary. Meanwhile, on April 13, 1960, New York filed a "Notice of Intervention" in the proceedings designated as *Transcontinental Gas Pipe Line Corp., et al.*, Docket No. G-20107, *et al.*, which included, among other producer applications, the Hurley application. New York, according to the certificate of service attached to its Notice of Intervention, served a copy upon Hurley. Also, the Commission order of April 29, 1960, recognizing New York's intervention was served upon Hurley.[1] However, Hurley failed to serve a copy of its "Motion To Remove Price Refund Condition From Temporary Authority," filed May 12, 1960 on any party to the proceeding except Transcontinental. On June 29, 1960, the Commission granted Hurley's unopposed motion and deleted the refund condition as requested.

New York's contentions with respect to the type of emergency conditions in which we are empowered to issue temporary certificates are properly rejected for the same reasons which caused us to reject identical contentions made by New York in other pending producer dockets. See the other issued December 31, 1962, in *J. Ray McDermott & Co., Inc., et al.*, Docket No. CI63-301, *et al.*, 28 FPC 1300.

However, the complaint by New York that it was not served with a copy of the motion for the removal of the refund condition and that it was not, therefore, afforded an opportunity to oppose the motion has a definite persuasive appeal. Our *Rules*, Section 1.17(b) are clear on the point that New York, as a participant in the *Transcontinental, et al.* proceedings, was entitled to a copy of Hurley's

[1] See the Commission's order issued in *Transcontinental Gas Pipe Corporation, et al.*, Docket No. G-20107, *et al.*, issued April 29, 1960.

motion. Fundamental concepts of due process, of course, require as much. Accordingly, the amending letter order issued on June 29, 1960 necessarily must be vacated and the original letter order issued on February 4, 1959 reinstated.

Adoption of this procedure is basically fair to both Hurley and the consumers represented by New York. Hurley, of course, accepted the first letter order and was expressly agreeable to the refund condition. It urged removal thereof only because temporary certificates were issued to other producers in allegedly comparable circumstances without similar provisions for a possible refund of monies collected in excess of the ultimate rate determined to be proper. New York should be allowed to oppose Hurley's motion by demonstrating with appropriate evidence the disposition it considers proper. Likewise, Hurley should be given opportunity to present evidentiary support for the motion. Accordingly, inasmuch as the motion for the removal of the refund condition is an integral part of the question of the in-line price at which Hurley's sales should be permanently certificated, it should be referred to the presiding examiner to be ruled upon as part of his recommended initial decision. In this connection, we have consolidated Hurley's permanent certificate application with other producer applications and fix date for hearing thereof by an order issued December 31, 1962, in the proceedings designated as *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*

New York's request that Hurley's deliveries be terminated along with the cancellation of its Rate Schedule No. 8 and that monies be immediately refunded down to a level arbitrarily selected by New York are rejected as being without factual or legal support. Such a course of action would be inimical to the public interest absent the development of a proper record showing that the abandonment of Hurley's sales meets the test of Section 7(b) of the Gas Act. Certainly, at this point in the development of the record, we could not make a finding that the public interest would not "be disserved" if the Hurley deliveries were terminated. *Michigan Consolidated Gas Co.* v. *F.P.C.*, 283 F. 2d 204, 214.

The last remaining question relates to the operation of Section 1.12(e) of our Rules and whether it is intended to deny *all* motions filed with the Commission unless otherwise expressly disposed of within 30 days. This Rule has never been so construed. A close reading of the entire Section 1.12 indicates that the denial of motions by the passage of time is confined to motions arising out of hearings before one of the Commission's duly appointed presiding examiners, unless a waiver of the rule is obtained. Moreover, the practice of the Commission is to act expressly upon all motions addressed to it. For these reasons, New York's interpretation of the operation of Section 1.12(e) as denying its motion to annul is erroneous, but to the extent that ambiguity may have existed, we have entertained New York's application for rehearing and except as otherwise noted, deny it for the reasons set forth above.

The Commission finds:

(1) The motion of New York to annul Hurley's temporary certificate, filed September 18, 1962, should be denied.

(2) The application filed November 8, 1962, by New York requesting rehearing and reconsideration of the claimed denial of its motion to annul by the operation of Section 1.12(e) of our Rules should be denied for the same reasons now expressly set forth herein requiring the denial of the motion to annul.

(3) The order, issued on June 29, 1960, amending the order of March 11, 1959 should be vacated.

(4) The motion to remove the price refund condition from the temporary certificate issued to Hurley on March 11, 1959 should be referred to the presid-

ing examiner to be ruled upon, in connection with, and as a part of his initial decision after the conclusion of the hearing upon Hurley's application.

The Commission orders:

(A) The motion of New York to annul Hurley's temporary certificate, filed September 18, 1962, is denied.

(B) The application filed November 8, 1962, by New York requesting rehearing and reconsideration of the claimed denial of its motion to annul by the operation of Section 1.12(e) of our Rules is denied for the same reasons now expressly set forth herein requiring the denial of the motion to annul.

(C) The order, issued on June 29, 1960, amending the order of March 11, 1959 is vacated and the latter order reinstated.

(D) The motion to remove the price refund condition from the temporary certificate issued to Hurley on March 11, 1959 is referred to the presiding examiner in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, to be ruled upon, in connection with, and as a part of his initial decision after the conclusion of the hearing upon Hurley's application.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MISSISSIPPI RIVER FUEL CORPORATION, DOCKET NO. G–19495

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 14, 1963)

On September 17, 1962, Mississippi River Fuel Corporation (Applicant) filed in Docket No. G–19495 an application to amend the Commission's order issued January 4, 1960, 23 FPC 8, as amended, in Docket No. G–19495 so as to authorize the construction during 1963 and the operation of 1,350 additional horsepower compressor facilities in the Woodlawn Field, Harrison County, Texas, all as more fully set forth in the application.

The order of January 4, 1960, as amended, authorized Applicant, among other things, to construct and operate additional compressor horsepower on its field supply system in the Woodlawn Field in order to take into its system natural gas from producers' wells in said field. Applicant, as of September 1, 1962, had in operation on the system ten field compressors with an aggregate of 3,594 horsepower. By order issued July 10, 1962, 28 FPC 101, in this docket, Applicant was authorized to construct during 1962 and operate an additional 675 compressor horsepower. Applicant states that by the end of 1962 it expects to install and place in operation 515 of the additional compressor horsepower authorized by the order of July 10, 1962. Applicant states further that, as a result of the decline in field pressures in the Woodlawn Field, 1,350 additional horsepower compressor facilities may be needed during 1963.

The cost of the proposed facilities is estimated to be $239,790, which cost will be financed from cash on hand.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on November 9, 1962 (27 F.R. 10980). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate to carry out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's

order, issued January 4, 1960, as amended, in Docket No. G–19495 be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued January 4, 1960, as amended, in Docket No. G–19495 is hereby further amended by authorizing Applicant to construct during 1963 and to operate up to 1,350 compressor horsepower in addition to the previously authorized compressor horsepower in the Woodlawn Field as hereinbefore described, all as more fully described in the application to amend.

(B) In all other respects, said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

THE RAMONA GAS AUTHORITY, DOCKET NO. CP63–33

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued January 14, 1963)

On July 30, 1962, as supplemented on September 19, 1962, The Ramona Gas Authority (Applicant) filed in Docket No. CP63–33 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Cities Service) to establish physical connection of its existing transmission facilities with the proposed facilities of and to sell and deliver natural gas to Applicant for resale and distribution in the Town of Ramona, Oklahoma, all as more fully set forth in the application, as supplemented.

Applicant will construct and operate a distribution system in Ramona and a transmission lateral connecting the proposed distribution system with the transmission facilities of Cities Service. Applicant estimates that approximately ten customers will be served from the transmission lateral.

Applicant's estimated third year peak day and annual natural gas requirements are 620 Mcf and 37,075 Mcf, respectively.

The total estimated cost of all proposed facilities aggregates $141,000, which cost will be financed by a loan from the Housing and Home Finance Agency.

On October 25, 1962, Cities Service filed an answer to the subject application stating that it has no objection to the requested Commission order.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on November 24, 1962 (27 FR 11569). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant, The Ramona Gas Authority, is a public trust organized under the laws of the State of Oklahoma and is legally empowered to sell and distribute natural gas in the Town of Ramona.

(3) It is necessary and desirable in the public interest that Cities Service be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 620 Mcf of natural gas per day to Applicant, as set forth in the application, as supplemented, and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Cities Service within one year from the date of issuance of this order.

(5) The requirement that Cities Service serve Applicant, as proposed, will not place any undue burden upon Cities Service nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Cities Service Gas Company be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 620 Mcf of natural gas per day to Applicant, all as hereinbefore described and as set forth in the application, as supplemented.

(B) Applicant shall be prepared to receive natural gas from Cities Service within one year from the date of issuance of this order.

(C) Cities Service shall report to the Commission in writing the date of commencement of service to Applicant.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP60-64

ORDER DENYING APPLICATION FOR REHEARING AND RECONSIDERATION

(Issued January 14, 1963)*

On December 19, 1962, Tennessee Gas Transmission Company (Tennessee), filed an application for rehearing and reconsideration of our order issued November 20, 1962, 28 FPC 843, denying its motion to amend the order granting it a certificate, issued on June 23, 1960, 23 FPC 846. The certificate authorized Tennessee to construct and operate a pipeline to a platform located at Block 16, East Cameron Area, Offshore Louisiana. The facilities would be utilized to transport natural gas produced from reserves underlying leases owned by Tennessee in adjoining Blocks 16, 17 and 24 to its main transmission system. Tennessee seeks to amend its certificate by having Blocks 16 and 24 deleted from within the scope of its certificate. For the reasons set forth herein, the application for rehearing fails to present sufficient reasons requiring any change in the action we have taken and accordingly it is denied.

As earlier set forth in its motion to amend, Tennessee in its application for rehearing contends that Blocks 16 and 24 are not productive of natural gas and therefore the Commission should amend the certificate as requested, or alternatively, find that no amendment is necessary. The denial of the motion was predicated upon our conclusion that geological data submitted in evidence in the instant case (See Exhibit H attached to the Application), as confirmed particularly with respect to Block 16 in proceedings upon the applications in *Tenneco Corporation, et al.*, Docket No. CI61-1272, *et al.*, (See Exhibit No. 5 and related testimony), shows that these Blocks are presently productive of natural gas being taken into Tennessee's system. Tennessee's contention that the Blocks are not productive of natural gas is at odds with this documentary and the oral evidence presented in the CI61-1272, *et al.*, proceeding.

In support of its position, Tennessee now states that it determined together with the Tenneco Corporation "just prior" to the filing of amended applications in Docket No. CI61-1272, *et al.*, on February 8, 1961, that only eleven of the fifteen "oil" leases listed in Exhibit No. 5 as producing associated gas were ac-

tually producing such gas. We are advised for the first time that Block 16 was not considered productive as a result of this private determination, even though the record evidence is to the contrary. (Block 24 was omitted entirely, erroneously we believe, from the list of on-system leases in Exhibit No. 5). Although Tennessee fails to state where in the evidentiary record or the pleadings it had disclosed the elimination of Block 16 from among its productive leases, it nevertheless relies upon this determination, reached with its affiliate, as providing a basis for arriving at a conclusion contrary to the evidence of record. It is elementary, of course, that our findings and conclusions must be supported by evidence presented in the formal record of proceedings before us. If changes in circumstances required a modification in Exhibit No. 5, such changes could, and should, have been developed through the submittal of appropriate evidence or by revision of Exhibit No. 5.

Tennessee also urges that our settlement order of August 28, 1962, disposing of the applications in Docket No. CI61–1272, *et al.*, provides authority for abandoning its leases in Blocks 16 and 24. It asserts that ordering paragraph (F) (ii) [1] recognized the transfer of "other properties" in addition to leases. Tennessee construes this to mean "oil properties and nonproductive or unclassified properties." While this paragraph comprehended properties of that character, among other properties (See Docket No. CI61–1272, *et al.*, Exhibit No. 4, General Conveyance), it did not recognize the transfer of any oil leases producing associated gas which, according to the evidence, is produced from Block 16. Therefore, it seems clear that our order granted no more than was expressly requested by Tennessee, i.e., the abandonment of eleven "oil" leases producing associated gas—not all fifteen listed in Exhibit No. 5.

Lastly, in support of the proposition that the Commission is not empowered to require a natural gas pipeline company to obtain abandonment permission, pursuant to Section 7(b), prior to the transfer of gas leases, Tennessee puts misplaced reliance upon the Commission's legislative proposal made to Congress that Section 7(b) be amended.[2] This proposed legislation is an outgrowth of *Federal Power Commission* v. *Panhandle Eastern Pipe Line Co.*, 337 U.S. 498, which involved gas leases "underdeveloped and not connected with any pipe-line system." (*Id.* at 500). By contrast, the leases covering Blocks 16 and 24, according to the evidence presented by Tennessee, are productive of natural gas and attached to Tennessee's pipeline system.

Significantly, a new well was recently completed on November 8, 1962, on acreage owned by Tennessee in Block 16 at the time we issued the certificate herein, which has been found to be productive of natural gas. This new well was drilled on Block 16 acreage which was a part of the acreage described in the certificate application herein as having natural gas reserves sufficient to warrant investment in, and construction of, Tennessee's gathering pipeline to Block 16. Tenneco now proposes to sell this gas, after receipt of certificate authorization, to Tennessee. See *Tenneco Corporation*, Docket No. CI63–634, filed on November 15, 1962. This newly productive well is, of course, confirmatory of Ten-

[1] Paragraph (F) (ii) states the following:

Tennessee shall file, within thirty days from the date of this order granting certificates, journal entries reflecting the transfer to Tenneco of the off-system gas leases, the eleven oil-casinghead gas leases, related facilities and other properties, excluding the on-system gas leases reconveyed by Tenneco to Tennessee.

[2] This proposal is as follows:

11. Alienation of gas reserves—amend Section 7(b) to require Commission approval for the transfer by an interstate natural gas pipeline company of natural gas reserves where such reserves have constituted part of the basis for issuance of certificates of public convenience and necessity. [See the Federal Power Commission's 41st Annual Report, issued January 1962, Page 3.]

nessee's original estimates of natural gas reserves which formed the basis for the issuance of the instant certificate "to attach * * * natural gas system reserves owned by Applicant * * * underlying approximately 8,500 acres under lease to Applicant in Blocks 16, 17 and 24 * * * ." The fact that the productive area has now been further developed to produce additional gas, strengthens our conclusion that Tennessee's and Tenneco's undisclosed change in the productive status of Block 16 was improper and incorrect. In these circumstances, which are quite different from those in *Panhandle*, it is incumbent upon us to determine whether it is in the public interest to permit leases, acquired, developed (at least partially) and attached by a natural gas pipeline company to its system, to be abandoned subsequently by transferring them to an affiliated producing company which will sell the gas produced from such leases back to the pipeline.

If the evidence presented by Tennessee and utilized by us as a basis for our conclusion is now believed by Tennessee to be out of harmony with current geological developments in the region under discussion, it is free, of course, to present additional evidence on such developments in subsequent proceedings. In fact the type of evidence which would be required to enable us to determine whether or not the transfer of the leases in Blocks 16 and 24 would be in the public interest is outlined in detail in our order denying the motion to amend. Accordingly, we will deny the present application for rehearing without prejudice to the filing of an application by Tennessee pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon these leases.

The Commission finds:

The application filed December 19, 1962, by Tenessee, requesting rehearing and reconsideration of our order of November 20, 1962, in the above-entitled proceeding, presents no new facts or legal considerations which were not fully considered by the Commission prior to the issuance herein of these orders, or which having been now considered, warrant any change in, modification of, or rehearing with respect to the said order.

The Commission orders:

Tennessee's application for rehearing and reconsideration of the Commission's order of November 20, 1962, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP63-27

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 14, 1963)

On July 26, 1962, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP63-27 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing September 1, 1962, and the operation of measuring and regulating stations and appurtenant facilities necessary for the establishment of new and additional delivery points for the sale and delivery of natural gas to existing utility customers for resale in the vicinity of Applicant's pipeline system, all as more fully set forth in the application.

The purpose of this "budget-type" application is to enable Applicant to act with reasonable dispatch in the installation of delivery points which are routine in nature but which otherwise might require the filing and processing of a separate certificate application for each such delivery point.

The total cost of all projects for which authorization is sought herein will not exceed a maximum of $100,000, with no single project to exceed a cost of $15,000.

Deliveries through the subject delivery points will be made under Applicant's filed FPC Gas Tariff.

Pursuant to due notice, a public hearing was held in Washington, D. C., on January 3, 1962, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Texas corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–859 (8 FPC 228).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities for the establishment of new and additional delivery points for the sale and delivery of natural gas to existing utility customers of Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization hereinafter granted, a statement under oath showing by project: (a) a description of said project or projects, (b) the location of said facilities, (c) actual final costs, (d) name of customer served, (e) estimated annual and peak day deliveries, and (f) use to which the gas is to be put.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing on the date on which this order issues, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $100,000, with no single project to exceed a cost of $15,000.

(8) The facilities hereinafter authorized should be used only for service to Applicant's existing utility customers within existing certificated delivery authorization limits, providing that such customers have the necessary local and state authorizations.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record

and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Texas Gas Transmission Corporation to construct during the 12-month period commencing on the date on which this order issues the proposed facilities hereinbefore described, all as more fully described in the application in this proceeding, and to operate such facilities only to serve existing utility customers within existing certificated delivery limitations, providing that such customers have the necessary local and state authorizations.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit within 60 days after the expiration of the authorization hereinbefore granted, a statement under oath showing by projects: (a) a description of said project or projects, (b) the location of said facilities, (c) actual final costs, (d) name of customer served, (e) estimated annual and peak day deliveries, and (f) use to which the gas is to be put.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing on the date on which this order issues, and the total expenditures for facilities to be constructed hereunder are hereby limited to a maximum of $100,000, with no single project to exceed a cost of $15,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CENTRAL MAINE POWER COMPANY

ORDER APPROVING AND DIRECTING DISPOSITION OF AMOUNTS CLASSIFIABLE IN ACCOUNT 114, ELECTRIC PLANT ACQUISITION ADJUSTMENTS

(Issued January 15, 1963)

Central Maine Power Company (Central Maine), Augusta, Maine, by letter of June 15, 1962, requested authorization which would result in the accounting disposition of a net amount of $3,037,983.60 classifiable in its Account 114, Electric Plant Acquisition Adjustments, as of December 31, 1961, through annual charges of $303,800[1] to its Account 425, Miscellaneous Amortization, over a period terminating December 31, 1971.[2] It is composed of the debit amount of $4,562,639.05 classifiable in Account 114 and the credit amount of $1,524,655.45 classifiable in Account 115, Accumulated Provision for Amortization of Acquisition Adjustments.

The amount of $3,037,983.60 results from reclassification and original cost studies of electric plant as of July 1, 1952, which Central Maine filed with this Commission on July 1, 1957; recorded book adjustments of Central Maine for the period July 1, 1952, through December 31, 1961; and additional adjustments

---

[1] Represents an approximate annual amortization rounded to the nearest $100.

[2] Account 114, Electric Plant Acquisition Adjustments provides: "* * * the amounts recorded in this account with respect to each property acquisition shall be amortized, or otherwise disposed of, as the Commission may approve or direct."

proposed by this Commission's staff following a field examination of Central Maine's accounts, books, records, and other data undertaken jointly with the staff of the Maine Public Utilities Commission. As of July 1, 1952, Central Maine had reclassified a total of $2,527,729.51 to its Account 114.[3] The Company's recorded additions to December 31, 1961, total $512,438.26. The proposed staff adjustment, concurred in by Central Maine's representatives, and the Maine Public Utility Commission, would classify an additional amount of $1,522,471.28 to Central Maine's Account 114 as of December 31, 1961, for a total of $4,562,639.05 as of that date. The additional amount of $1,522,471.28 arises as the result of excesses of acquisition cost over staff recommended original cost of three developments known as the West Buxton, Bonny Eagle and North Gorham plants acquired from Cumberland County Power and Light Company in 1942. In accordance with the staff proposal, Central Maine will effect this reclassification of $1,522,471.28 by a transfer from its Account 101, Electric Plant in Service.

In disposing of the foregoing amounts classifiable in Account 114, Central Maine proposes to reclassify the amount of $774,655.45 to its Account 115, Accumulated Provision For Amortization of Electric Plant Acquisition Adjustments, from Account 108, Accumulated Provision for Depreciation of Electric Plant in Service; and to amortize the amount of $3,037,983.60 by annual charges of $303,800 to Account 425, Miscellaneous Amortization, with concurrent credits to Account 115 over the period commencing 1962 and ending not later than December 31, 1971.

At various times prior to 1962, Central Maine through charges to Account 403, Depreciation Expense, and concurrent credits to Account 108, Accumulated Provision for Depreciation of Electric Plant in Service, made annual provisions with respect to amounts classified in its Accounts 101 and 114. As of December 31, 1961, these provisions totaled $774,655.45. As noted above, Central Maine now proposes to transfer this amount from Account 108 to Account 115 as of that date. Also, Central Maine through charges to Account 425, Miscellaneous Amortization, and concurrent credits to Account 115 made annual provisions totaling $750,000 for the years 1957 through 1961. These amounts ($774,655.45 and $750,000) totaling $1,524,655.45 when deducted from the gross amount of $4,562,639.05 classifiable in Account 114 as of December 31, 1961, result in the net amount of $3,037,983.60 which Central Maine proposes to dispose of by charges to Account 425 and concurrent credits to Account 115 during the period commencing 1962 and ending not later than December 31, 1971.

The accounting disposition of all amounts involved in the foregoing adjustments to Central Maine's electric plant accounts are to be accomplished by the following composite journal entry:

Account No.	Title	*Debit*
114	Electric plant acquisition adjustments	$1,522,471.28
108	Accumulated provision for depreciation of electric plant in service	774,655.45
		Credit
101	Electric plant in service	1,522,471.28
115	Accumulated provision for amortization of electric plant acquisition adjustments	774,655.45

The accounting dispositions of the foregoing amounts, as proposed by Central Maine and recommended by this Commission's staff, were agreed to among rep-

[3] Account references are to account numbers and titles prescribed in the Commission's Uniform System of Accounts for Public Utilities and Licensees effective January 1, 1961.

resentatives of Central Maine, the Maine Public Utilities Commission and this Commission's staff at conferences held May 24 and 25, 1962, at the office of this Commission.

The Commission finds:

(1) The amount of $4,562,639.05 as referred to above is properly classifiable in Account 114, Electric Plant Acquisition Adjustments.

(2) The amount of $774,655.45 as referred to above is properly classifiable in Account 115, Accumulated Provision for Amortization of Electric Plant Acquisition Adjustments. The appropriate total credit balance in Central Maine's Account 115 as of December 31, 1961, is $1,524,655.45.

(3) The net amount of $3,037,983.60 resulting from the classification of the amounts as referred in findings (1) and (2) should be disposed of through annual charges of $303,800 to Account 425, Miscellaneous Amortization, and concurrent credits to Account 115, Accumulated Provision for Amortization of Electric Plant Acquisition Adjustments, commencing in 1962 and ending not later than December 31, 1971.

(4) It is necessary and appropriate for the purposes of the Federal Power Act and the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees to require that Central Maine complete the accounting reclassification and disposition of the foregoing amounts in the manner as hereinafter provided.

The Commission orders:

(A) Central Maine is hereby directed to complete the accounting reclassification and disposition of all amounts referred to in the findings above, in the manner there set forth.

(B) Central Maine shall submit within 60 days from the date of issuance of this order two certified copies of the accounting entries giving effect to the accounting reclassification and dispositions herein directed. On or before January 30 of each year, beginning with the year 1963, Central Maine shall submit two certified copies of the entries reflecting the annual amortization during the preceding year of the unamortized amount classified in Account 114.

(C) Nothing herein contained shall be construed as passing upon the classification of other amounts which may be properly classifiable in Account 114 but which are now included in Central Maine's Account 101, Electric Plant in Service. To the extent that such amounts are hereafter determined to be properly classifiable in Account 114, in accordance with the requirements of the Commission's Uniform System of Accounts, they shall be disposed of as hereafter directed by the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

VILLAGE OF CISNE, ILLINOIS, DOCKET NO. CP63-38

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued January 15, 1963)

On August 8, 1962, as supplemented and amended on October 30, 1962, the Village of Cisne, Illinois (Applicant) filed in Docket No. CP63-38 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Trunkline Gas Company (Trunkline) to establish physical con-

nection of its interstate transportation facilities with those which Applicant proposes to construct, and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the Villages of Cisne and Johnsonville, both in Illinois, all as more fully set forth in the application as supplemented and amended.

The total volumes of gas required to meet the estimated peak day and annual requirements for the first three years of operation are as follows:

Year of operation	Peak day	Requirements (Mcf), annual
1st	300	28,550
2d	400	39,660
3d	580	55,590

Applicant estimates the cost of its project to be $180,000 which will be financed by the sale of gas utility certificates through local subscription.

Applicant, by ordinance and referendum has been authorized to construct, acquire, own and operate a municipal gas utility, and by franchise has been authorized to sell and distribute gas in the Village of Johnsonville.

Trunkline, on November 2, 1962, in its answer to the application as supplemented and amended stated that it has not objection to the issuance of the order requested by Applicant.

Notice of the filing of the application was published in the Federal Register on November 21, 1962 (27 F.R. 11478). No petition to intervene, protest or request for hearing has been received.

The Commission finds:

(1) Applicant, the Village of Cisne, Illinois, is a municipal corporation organized and existing under the laws of the State of Illinois and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in the Villages of Cisne and Johnsonville, Illinois.

(2) Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 250).

(3) It is necessary and desirable in the public interest to direct Trunkline Gas Company to establish physical connection of its transmission facilities with the facilities proposed to be constructed by Applicant as hereinbefore described, all as more fully described in the application in this proceeding, as supplemented and amended, and to sell and deliver to Applicant up to 580 Mcf of natural gas per day for resale and distribution in the Village of Cisne and Johnsonville, Illinois as hereinafter ordered.

(4) Applicant should be prepared to receive natural gas from Trunkline Gas Company within nine months from the date on which this order issues.

The Commission orders:

(A) Trunkline Gas Company be and is hereby directed to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant as hereinbefore described, all as more fully described in the application in this proceeding, as supplemented and amended, together with such metering, regulating, and appurtenant facilities as may be required therefor, and to sell and deliver up to 580 Mcf of natural gas per day to Applicant pursuant to Trunkline Gas Company's appropriate rate schedules on file with the Commission.

(B) Trunkline Gas Company shall report to the Commission the date of commencement of service to Applicant within ten days thereof.

(C) Applicant shall be prepared to take natural gas as proposed herein within nine months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

H. L. HUNT, ET AL., DOCKET NO. RI62-467; HASSIE HUNT TRUST, DOCKET NO. RI62-468; HASSIE HUNT TRUST (OPERATOR), ET AL., DOCKET NO. RI62-469; WILLIAM E. McCOMMONS, D/B/A McCOMMONS EXPLORATION COMPANY, ET AL., DOCKET NO. RI62-476; PLACID OIL COMPANY (OPERATOR), ET AL., DOCKET NO. RI62-477; HUNT OIL COMPANY, DOCKET NO. RI62-523.

ORDER DENYING APPLICATION FOR REHEARING

(Issued January 15, 1963)

On December 17 and December 31, 1962, Hunt Oil Company, Hassie Hunt Trust and Placid Oil Company (all here referred to as "Hunt") filed Applications for Rehearing of our Opinion No. 369, issued on November 30, 1962, 28 FPC 897, in which we granted a staff motion to dismiss on the ground that respondents had failed to sustain their burden of proof under Section 4(e) that proposed increased rates are just and reasonable.

The major reasons advanced on behalf of the present application are those previously urged by the various Hunt entities during the course of these proceedings. No new grounds have been advanced which could serve as the basis for a rehearing.

Hunt contends that it was not sufficient for Opinion 369 to hold that respondents failed to meet their burden of showing that the proposed increased rate is just and reasonable. Rather, Hunt says, we must find that the rate is unjust and unreasonable, and therefore unlawful. Section 4(e) places the burden of proof that an increased rate is just and reasonable upon the natural-gas company. Our finding that this burden has not been met is all that the statute requires.

Hunt urges that no guidelines were available to it. However, the Hunt presentation was not only in conflict with the guiding standards of our *Phillips* Opinion No. 338, 24 FPC 537, issued two years before these proceedings as Opinion No. 369 points out, but it was inconsistent with a reasonable allocation of costs as between oil and gas.

Hunt indicates that the proceedings in Docket No. G-9065 were remanded to the examiner by our Opinion No. 365, 28 FPC 623, for the "same reasons" that we are dismissing this proceeding. However, we remanded Docket No. G-9065 because there the hearings had concluded before the issuance of our *Phillips* Opinion No. 338 and we wished to make certain that the respondents in G-9065 had available to them the guidance provided by Opinion No. 338. No such situation is present here where the proceedings did not begin until two years after the issuance of Opinion No. 338. The triggering effect of the proposed increased rates upon the favored-nation clauses of other producers is also a factor here.

Hunt suggests that various pieces of its evidence constituted a *prima facie* case upon a motion to dismiss and so must be accepted in the absence of specific rebuttal. However, as we pointed out in Opinion No. 369 Hunt's evidence was

deficient and did not make out a *prima facie* case in light of Hunt's statutory burden of proof. The fact that the Commission had only Hunt's evidence to consider certainly did not lessen Hunt's burden of proof.

The suggestion that certain of Hunt's presentations were in conformity with the examiners decision in Docket No. G–9065 must be viewed in light of the fact that we did not accept that decision, and that we found the principles used by Hunt to conflict with a reasonable and proper cost of service presentation.

Hunt again urges that it was proper for it to use sales volumes rather than production volumes for its cost of service presentation. However, as pointed out in Opinion No. 369, the use of tailgate sales volumes rather than wellhead production volumes produces distortions. An allocation based exclusively on sales volumes could result in the inclusion of liquid costs in the final determination of gas sales cost. Wellhead production volumes (less flared or wasted gas or liquids) were used initially in *Phillips* Opinion No. 338, *supra*, (with subsequent volumetric and Btu allocation methods) to allocate to the cost of liquids those gas production costs primarily attributable to liquid production, *e.g.*, gas recycling in gas condensate reservoirs. The use of sales volumes also may result in the inclusion of processing and other plant costs in the relative cost allocation although they relate only to sales volumes for the gas processed rather than production volumes.

In *Phillips* Opinion No. 338 both production and sales volumes were available, but it was production volumes that were used for allocation purposes in order to allocate production costs initially between lease liquids and raw gas, while production and sales volumes were subsequently used in the allocation of all processed gas joint costs between plant liquids, etc., and gas sales volumes. Similarly, it is not possible accurately to appraise the offsetting effect of including cycling and gasoline plant investment and operating expenses in the oil leg (an inclusion which is improper in any event, these not being production costs) when only "conglomerate costs" are available, for in the absence of production volume figures, that is the only kind of cost available.

Likewise, Hunt's claimed "segregation and functionalization" of cycling and gasoline costs runs up against the fact that in the absence of production volumes it is not possible to know how to make accurate and appropriate allocations of such expense as between gas and oil—we do not know how much gas and how much oil was produced and how much gas was delivered for processing, and to what extent the figures represent items beyond the lease or have excluded volumes that were returned to the lease, etc.

We suggested in Opinion No. 369 that other major producers use production volumes and that Hunt too could make them available, citing tax and royalty records as one possible source. Even if Hunt's tax and royalty payments are based on sales revenues, Hunt should be able to obtain production volumes from its own records or from other sources, just as all other major producers do, and as Hunt itself has done in the South Louisiana area rate proceeding, AR61–2.

The Commission, in *Phillips* Opinion No. 338, based on its expert judgment and a reasoned set of factors, concluded that an economic factor of four to one was appropriate for the allocation of exploration costs. It is not sufficient for Hunt to take this same set of factors and substitute its own unsupported conclusion that an economic factor of three to one should be used without an affirmative showing that the Hunt conclusion is appropriate.

A major function of a proper cost of service method is to allocate costs accurately so far as possible between gas and liquids. While this may often require

judgment and approximation, leading us to approve a reasonable range of flexibility, this does not extend to the point of approving allocations which are inaccurate on their face. For this reason Opinion No. 369 holds it impermissible for Hunt to have either included all of its gas condensate properties in its gas leg, thereby assigning too high a proportion of liquid, or, to exclude all condensate properties where its gas only properties are too few in number and volume to permit a reasonable allocation. We require only that some reasonable formula be used, without trying to specify an arbitrary figure.

Hunt again contends that physical, rather than economic principles of allocation should be used. This contention was adequately dealt with in Opinion No. 369. Similarly, the Hunt applications for rehearing devote time to rearguing at length their contentions as to the allocation of general and administrative expense, the relevance of the principles set forth in the Commission's *CATCO* Opinion No. 351, 27 FPC 96, the need to show an appropriate rate design despite an overall revenue deficiency, the treatment of cash for lease plays and the determination of rate of return. Since these matters were dealt with in detail in Opinion No. 369 and as Hunt does not offer any intrinsically new argument on these points, we feel that they have been adequately disposed of by our discussion in Opinion No. 369.

The Commission orders:

For the reasons set forth above, the Applications for Rehearing are hereby denied.

Commissioners Ross and Morgan *dissenting* for the reasons set forth in Commissioner Ross' dissenting statement accompanying Opinion No. 369 (28 FPC 897; 907).

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

THE CITY OF JASONVILLE, INDIANA, DOCKET NO. CP63–71

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued January 15, 1963)

On September 20, 1962, The City of Jasonville, Indiana (Applicant), filed in Docket No. CP63–71 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Texas Gas Transmission Corporation (Texas Gas) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in Jasonville and environs, including the Coalmont area, all as more fully set forth in the application.

Applicant proposes to construct and operate two lateral pipelines extending from two points of connection with Texas Gas' transmission line to town border stations in Jasonville and Coalmont. Applicant will also construct the necessary distribution facilities to provide the proposed service.

Applicant's estimated third year peak day and annual natural gas requirements are 742 Mcf and 79,632 Mcf, respectively,

The total estimated cost of transmission and distribution facilities for the project is $389,000, which cost will be financed by the issuance of gas revenue bonds.

On October 23, 1962, Texas Gas filed an answer to the subject application stating that it had no objection to rendering the requested service provided, among other things, that Applicant executes a service agreement with Texas

Gas within a specified time after the issuance of any order directing the requested service.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on December 5, 1962 (27 F.R. 12009). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–859 (8 FPC 190).

(2) Applicant, The City of Jasonville, Indiana, is a municipal corporation incorporated under the laws of the State of Indiana and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in The City of Jasonville.

(3) It is necessary and desirable in the public interest that Texas Gas be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 742 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to receive gas from Texas Gas, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant and Texas Gas in accordance with the Commission's Regulations under the Natural Gas Act.

(5) The requirement that Texas Gas serve Applicant, as proposed, will not place any undue burden upon Texas Gas nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Texas Gas Transmission Corporation be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 742 Mcf of natural gas per day to Applicant, all as hereinbefore described and as set forth in the application.

(B) Texas Gas shall report to the Commission in writing the date of commencement of service to Applicant.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from Texas Gas, as proposed, within one year from the date on which this order issues and upon the execution of a service agreement between Applicant and Texas Gas in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PUBLIC UTILITY DISTRICT NO. 1 OF SNOHOMISH COUNTY AND CITY OF EVERETT, WASHINGTON, PROJECT NO. 2157

ORDER APPROVING EXHIBIT L DRAWINGS

(Issued January 15, 1963)

On June 22, 1962, Public Utility District No. 1 of Snohomish County, Washington, and the City of Everett, Washington, joint licensees for Project No.

2157. [license issued, 25 FPC 1160], filed for Commission approval Exhibit L drawings for the North and South Dams on Lake Chaplain reservoir to show those project structures of the Sultan River project as constructed.

The drawings show that the North and South Dams were completed in 1943, are 25 and 50 feet in height, respectively, and are earth-fill structures with crest elevation at 747.56 feet. Normal water surface elevation is shown as 739.56 feet.

According to a Commission staff inspection of the dam structures, the structures are sound and no leakage was observed. The project structures were also checked by the staff for stability and were found to be well within the limits of safety.

The Commission finds:

The following described Exhibit L drawings for the North and South Dams of the Sultan River project conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit L, Sheet 17 (FPC No. 2157 entitled "Lake Chaplain Storage Works, Vicinity Map, General Map of Reservoir and Dams, Reservoir Area and Capacity Curves;" Sheet 18 (FPC No. 2157–48) entitled "Lake Chaplain Storage Works, South Dam, Detail Topography and Design Details;" Sheet 19 (FPC No. 2157–49) entitled "Lake Chaplain Storage Works, North Dam, Detail Topography and Design Details;" and Sheet 20 (FPC No. 2157–50) entitled "Lake Chaplain Storage Works, Spillway and Minor Structures."

The Commission orders:

The Exhibit L drawings described in the above findings are hereby approved as part of the license for Project No. 2157.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP63–48

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 15, 1963)

On August 28, 1962, as supplemented on September 20, 1962, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP63–48 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the operation of certain pipeline facilities which have constructed pursuant to Section 157.22 of the Commission's Regulations under the Natural Gas Act, all as more fully set forth in the application as supplemented.

Spring flooding has caused the main channel of the Yalobusha River to move approximately 160 feet west of the previously established channel, where it is crossed by Applicant's Kinder-Portland Line in Grenada County, Mississippi, at Main Line Valve 846 plus 0.9 miles. The submerged river crossing consists of a single 30-inch line approximately 800 feet in length. As a result of the shifting of the river channel, approximately 50 feet of the pipeline approach to the river crossing has been undercut by river currents to an average depth of 5 feet. This 50-foot section of pipeline, which had previously been buried in the ground to a depth of from 3 to 7 feet, is now suspended in the water and is moving with the river currents. It will be impractical to attempt to lower the original pipeline crossing until such time as the additional crossing

is placed in service because, for safety purposes, the flow of gas through the original line will have to be terminated until the work is completed. Therefore, in order to continue uninterrupted deliveries of gas through the Kinder-Portland Line, Applicant seeks authorization to operate an additional submerged pipeline crossing of the Yalobusha River.

The additional submerged crossing of the Yalobusha River is located approximately 100 feet downstream from the original crossing and consists of a single 30-inch submerged pipeline approximately 1,100 feet in length plus the necessary appurtenances thereto.

After the additional line is placed in service, Applicant will lower the original line, and thereafter Applicant will utilize both river crossings. The additional facilities will not increase Applicant's over-all system capacity.

The total cost for the new facilities is estimated to be $219,000, to be financed from general funds or revolving credit.

Pursuant to due notice, a public hearing was held in Washington, D. C., on January 3, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the continued operation thereof by Applicant is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The continued operation of the subject facilities by Applicant is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Tennessee Gas Transmission Company, to continue operation of the subject facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(4), and (e) of Section 157.20 of such Regulations.

UNITED FUEL GAS COMPANY, AMERE GAS UTILITIES COMPANY, ATLANTIC SEABOARD CORPORATION, DOCKET NO. CP61-107

OPINION AND ORDER SETTING ASIDE INITIAL DECISION OF PRESIDING EXAMINER, APPROVING CONSOLIDATION OF NATURAL GAS FACILITIES, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND DIRECTING REVISED FILINGS

(Issued January 16, 1963)*

Syllabus

1. Evidence here precludes finding that transfer of Boldman Compressor Station will constitute grant of undue preference. P. 93.
2. Imposition on Atlantic of costs of ownership of Boldman constitutes undue discrimination; Commission *concludes* public convenience and necessity requires transfer thereof to United. P. 94.
3. Merger of Amere into United will benefit utility customers and public generally by providing more efficient and economical operation. P. 95–96.
4. Transfer of Atlantic's KA–20 line to United will remedy inequities in service rendered Atlantic. P. 96–97.
5. Merger herein approved will resolve long-standing conflict between State and Federal Regulation thereby advancing one of fundamental purposes of the Natural Gas Act. P. 97.
6. Benefits realized by the public amply outweigh relatively minor rate adjustments made necessary by transfer of facilities. P. 97.
7. Commission *authorizes* abandonment and *issues* certificate of public convenience and necessity in proceeding arising under Sections 7(b), 7(c) and 7(e) of the Natural Gas Act. P. 98.

John M. Hill, R. K. Talbott, Edward B. Calland, T. A. Jones and *William C. Hart* for United Fuel Gas Company, Amere Gas Utilities Company and Atlantic Seaboard Corporation

Julian De Bruyn Kops and *William E. Herron* for The Dayton Power and Light Company

Phoebe Eppes Gordon and *Michael E. Shea* for Lynchburg Gas Company

Charles S. Rhyne, Herzel H. E. Plaine and *Edward D. Means, Jr.*, for the City of Pittsburgh, Pennsylvania

C. Oscar Berry and *Karl Michelet* for Washington Gas Light Company

James A. Biddison, Jr., for Baltimore Gas & Electric Company

John P. Egan for The Manufacturers Light & Heat Company

Walter E. Bechjord and *Richard H. Rhein* for The Cincinnati Gas & Electric Company and The Union Light, Heat & Power Company

W. F. Laird and *Ralph N. Mahaffey* for The Ohio Fuel Gas Company

James O. Watts, Jr., for Commonwealth Natural Gas Corporation

Herbert E. Squires and *Alan R. Squires* for Pennsylvania Public Utility Commission

---

*Designated Commission Opinion No. 377. Initial decision appears on P. 99. Rehearing denied by order issued March 12, 1963, 29 FPC 456.

Robert L. Stewart for Public Service Commission of West Virginia
Agnes Mae Wilson for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

O'CONNOR, *Commissioner:* This proceeding, arising under Sections 7 (b), (c), and (e) of the Natural Gas Act, involves a joint application filed October 5, 1960[1] by United Fuel Gas Company (United), Amere Gas Utilities Company (Amere), and Atlantic Seaboard Corporation (Atlantic), hereinafter jointly referred to as applicants, all subsidiaries of The Columbia Gas System, Inc. (Columbia), seeking the Commission's approval for a consolidation of various jurisdictional natural gas facilities and operations by merger and acquisition. The precise transfers contemplated are set out in detail in the initial decision issued June 6, 1962, *infra.*, pp. 99–100, and reference is made thereto in lieu of a further general review herein. In essence, Atlantic proposes to abandon and sell to United its Boldman Compressor Station in Pike County, Kentucky and 139.5 miles of its KA–20-inch pipeline[2] extending from Boldman to the Virginia-West Virginia border, including two line compressor stations in West Virginia and a short lateral (Line KB) also terminating at the state line. Atlantic also seeks permission to terminate the sale and delivery of natural gas at wholesale to Amere and Zebulon Gas Association, Inc. (Zebulon), companies presently serviced from the portion of the KA–20-inch pipeline proposed to be transferred. Amere requests permission to abandon, by merger into and with United, its transmission facilities and to terminate service to Bluefield Gas Company. United seeks a certificate of public convenience and necessity to purchase and operate the facilities and to render the wholesale services to be abandoned by Atlantic and Amere, to take over the local production now entering the abandoned line, and to acquire Amere's retail facilities and service which are now under the jurisdiction of the Public Service Commission of West Virginia. The only new construction involved in the application is a measuring and regulating station, estimated to cost $49,000, to be erected at the Virginia-West Virginia border and at which United will sell gas to Atlantic in place of its present delivery point at Boldman. Atlantic would thus purchase a portion of its gas supply 140 miles closer to its major market area than at present.[3]

In consideration for the merger of Amere, United will issue to Columbia, as sole stockholder of Amere, against the surrender for cancellation of the outstanding capital stock of Amere, such number of shares of United's capital stock, par value $25 per share, as shall equal in par value the par value of Amere's outstanding capital stock. The capital and earned surplus of Amere will be carried forward as capital and earned surplus of United. United will take up on its books the assets and properties acquired, the related reserves and the liabilities and obligations assumed, at the respective amounts at which they shall be carried on the books of Amere as of the closing date specified in the acquisition contracts. The installment promissory notes of Amere are to remain unchanged except to become the obligation of United. In payment for the proposed acquisition of facilities from Atlantic, United will issue and deliver to Atlantic installment promissory notes in an aggregate principal amount equal to the value of the assets acquired. These notes will be turned over to Columbia in

[1] Supplementary filings were made on December 9, 1960 and February 1, 1961.

[2] Atlantic's total KA–20 system is 420 miles in length and extends to the Maryland-Pennsylvania border.

[3] As of March 31, 1960, approximately 19 percent of the total deliveries by United to Atlantic were made through the subject facilities. The major share of United's deliveries is made at Clendenin, West Virginia into Atlantic's Cobb-Rockville pipeline.

prepayment of an equal principal amount of installment promissory notes of Atlantic owned by Columbia. In connection therewith Atlantic will select and prepay its notes in such proportion that, after all prepayments have been effected, there will not have been any change in the averages, weighted as to principal amounts, of the interest rates borne by and the maturities of Atlantic's notes owned by Columbia. The installment promissory notes issued by United to Atlantic will bear such interest rates, dates of maturity and other terms as the notes prepaid by Atlantic. The cost of the new measuring and regulating station will be financed by United from operations. No exception to the proposed financing method has been taken by any of the parties to this proceeding.

The initial decision of the presiding examiner, issued June 6, 1962, would deny United the authority to acquire and operate the facilities of Amere and Atlantic, as described, on the ground that the proposal would result in an increase in United's cost of service and, ultimately, serve to increase the gas purchase costs of United's retail distributors located north and west of Boldman, notably The Cincinnati Gas & Electric Company, The Union Light, Heat and Power Company and The Dayton Power and Light Company,[4] while at the same time lowering the net purchased gas costs of Atlantic, thereby providing an apparent "windfall" to Washington Gas Light Company, Baltimore Gas and Electric Company, Commonwealth Natural Gas Corporation, and other Maryland and Virginia customers, all without any change or improvement in service or other corresponding benefits. The named customer companies intervened either for or against the application depending on whether their individual costs would be raised or lowered.[5] The Lynchburg Gas Company, a small wholesale customer of Atlantic, opposed the application although it apparently would receive a slight reduction in purchased gas costs. The Pennsylvania Public Utility Commission and the City of Pittsburgh, Pennsylvania favor approval of the application only on condition that Atlantic reimburse United for the increase in the latter's jurisdictional cost of service resulting from the transfer of the KA–20 facilities, *i.e.*, that United be required to charge a higher rate for gas delivered into Atlantic's KA–20 facilities at the Virginia-West Virginia state line than the rates charged to United's other jurisdictional customers. The Public Service Commission of West Virginia indicated support for the application. The Commission's staff has recommended that the application be approved as presented. The proceeding is now before us on exceptions to the examiner's decision filed by applicants, Washington Gas Light Company, Baltimore Gas and Electric Company, Lynchburg Gas Company, and our staff.

Upon our review we conclude that the application for intercorporate transfer of ownership and operation of the properties as proposed herein is consistent with the requirements of Section 7 of the Natural Gas Act and should be approved by the Commission. The record amply demonstrates that the requested transfer of facilities will eliminate certain existing inequities in the service presently rendered to Atlantic, as hereinafter described, and will result in the more efficient operation of both United's and Atlantic's pipeline systems. Accordingly, we shall set aside the initial decision of the presiding examiner and shall direct consolidation of the various natural gas facilities and operation in conformity with the application submitted and our findings made herein.

[4] These companies are not supplied directly by United but purchase their gas from Kentucky Gas Transmission Corporation or The Ohio Fuel Gas Company, both of which obtain all or a substantial portion of their supply from United.

[5] Although intervention also was granted to The Manufacturers Light and Heat Company and The Ohio Fuel Gas Company, they did not actively participate in the hearing and took no position with respect to the application. Commonwealth Natural Gas Corporation filed a brief supporting transfer of Boldman Station and the KA–20 facilities to United but took no position with respect to the Amere merger.

Boldman Compressor Station

This station, consisting presently of two 2,000 horsepower and two 1,000 horsepower gas engine driven compressor units, was constructed by Atlantic in 1931 at the western terminus of its 20-inch pipeline extending from Pike County, Kentucky to the Maryland-Pennsylvania state line. Historically, Atlantic purchased locally-produced gas from United at low field pressures on the inlet or suction side of the station and moved the gas directly eastward to its markets, bearing the full costs of compression and transportation. Beginning July 31, 1957, a change in operations occurred whereby this high Btu unprocessed gas, after compression by Atlantic, is transferred back to United at the outlet of Boldman and transported westward for processing at United's Kenova extraction plant. In return, Atlantic receives from United an equivalent volume of treated gas plus a sufficient additional quantity to make up for the difference in heat content of the two gases.[6] This exchange gas, pressurized by United prior to delivery, is injected into Atlantic's KA–20-inch line at a point immediately beyond the Boldman Station. The record indicates that the direct connection between Boldman and the KA–20-inch line has not been used since prior to March 31, 1959, nor is it contemplated by the applicants to utilize this connection in the near future.

Applicants, together with Washington and Baltimore, argue that Atlantic's continued operation of Boldman is unique in that it is the only instance where a customer of United is required to provide compression from wellhead pressure, 50–60 psig, to transmission levels at the purchase point. Washington, specifically, has urged that the disparity between the lack of compression on the gas furnished to Atlantic at Boldman and the compression service rendered by United to its other interstate customers is discriminatory and constitutes a violation of Section 4(b) of the Natural Gas Act. Cincinnati and Union, on the other hand, presented evidence tending to show a similar situation near Means, Kentucky where Kentucky Gas Transmission Company, their supplier, is required to provide compression within a short distance of the delivery point on gas delivered to it by Columbia Gulf Transmission Company on United's account. These interveners contend that approval of the Boldman transfer, and the attendant rise in United's cost of service, will serve to compound the alleged existing discrimination against Kentucky Gas. On this basis they request that the Commission not consider the transfer of Boldman until the transfer of certain of the Kentucky Gas facilities to United also is proposed. We agree with the conclusion of the examiner that proof of a discrimination in the situation complained of by Cincinnati and Union would encompass far more than the simple allegations and the evidence set forth in this Section 7 proceeding. Moreover, the existence of other factors involving the gas supplied Kentucky Gas through the Columbia Gulf line, highlighted in the staff brief, together with the fact that the pressure at the Means delivery point (over 900 psig) is in itself higher than at any other point on United's system, precludes our finding, on the evidence here presented, that transfer of the Boldman Station will constitute the grant of an undue preference to Atlantic.

Testimony presented by applicants in the hearing and as expanded upon in Washington's brief reveals that a price differential on the sale of gas by United to Atlantic at Boldman, dating from the initial contractual arrangement in 1931, was eliminated without any compensatory benefit to Atlantic upon the effective-

[6] The described exchange was approved by order issued April 15, 1957, in *United Fuel Gas Co.* and *Atlantic Seaboard Corporation*, Docket No. G–11184, 17 FPC 534, and is filed with the Commission as rate schedule X–7 in United's FPC Gas Tariff, Original Volume No. 2.

ness in 1952 of United's uniform system-wide contract demand rate filed in Docket No. G–1781.[7] Prior thereto the rate charged Atlantic at Boldman was lower than United's rates to its other jurisdictional customers. Even upon the initiation of deliveries in 1950 into Atlantic's Cobb-Rockville pipeline, the rate for deliveries to Atlantic at Boldman Station continued to be at a lower price level.

The application for transfer of Boldman from Atlantic's ownership to United is in accordance with an offer of settlement filed by United on July 7, 1960, and approved by the Commission by order issued September 15, 1960,[8] wherein United agreed to pay $500,000 to Atlantic for the period July 14, 1957 through April 4, 1960 in settlement of the claim by the Commission's staff and customers of Atlantic that Boldman was operated entirely for the benefit of United and that the costs arising therefrom should be borne by United.[9] United and Atlantic further agreed to file the necessary application to effectuate the sale and transfer of the compressor station and, upon authorization, to include the costs associated with ownership and operation of the station in United's cost of service, effective April 5, 1960, for rate-making purposes.

By our orders issued December 29, 1961, 26 FPC 945, February 19, 1962, 27 FPC 369, and March 20, 1962, 27 FPC 538, in Docket Nos. G–20272 and G–20270 we approved, subject to conditions not material herein, settlement agreements providing for costs of service for a test year ending March 31, 1960, to be used by United and Atlantic as the basis for determining rates from and after April 5, 1960. The settlement in Docket No. G–20270 included the cost of Boldman in United's cost of service for a net increase of $93,769. The cost of service approved for Atlantic in Docket No. G–20272, while continuing to treat Boldman as though owned by Atlantic, stipulated a downward adjustment in the amount of $104,787 in the event of approval of the Boldman transfer.

The evidence establishes that Boldman is used to supply compression solely for the benefit of United and not for the transportation of gas by Atlantic. Atlantic receives title to the gas at the suction side of Boldman, retains it only long enough to incur the expense of compression, and then immediately transfers it back to United. The exchange gas supplied by United does not compensate Atlantic for the expense incurred in the compression of the original gas. Boldman is the only instance where a customer of United is required to provide compression for United at the point of delivery. We find that the continued or renewed imposition on Atlantic of the costs of ownership and operation of Boldman in the existing situation constitutes an undue discrimination and that the relief requested not only is appropriate but is necessary under the provisions of the Natural Gas Act. Accordingly, we conclude that the public convenience and necessity requires the transfer of Boldman Compressor Station from Atlantic to United, and the transfer thereof will be so ordered.

Merger of Amere into United

Amere, which is presently supplied by Atlantic from the KA–20-inch pipeline, sells a small quantity of gas at wholesale to Bluefield Gas Company for resale in interstate commerce, but is primarily engaged in the retail distribution of natural gas to 19,000 customers in the six southern counties of West Virginia. Total sales by Amere for the year ending March 31, 1960 were 4,564,104 Mcf. Its natural gas plant consists primarily of distribution facilities located in three

[8] *United Fuel Gas Company*, Docket Nos. G–12195, G–16316, G–16815 and G–18420, 24 FPC 467.

[9] This amount was not charged to United's other customers and did not affect the settlement rates.

separate areas contiguous to Atlantic's line. Except for minor gathering facilities, it neither owns nor operates any production or storage facilities. In addition to purchasing gas from Atlantic,[10] Amere also purchases locally produced gas in the Beckley-Mullens area in Wyoming, Raleigh and Kanawha Counties for direct distribution. However, since such gas supply exceeds Amere's requirements in off-peak periods, Atlantic has contracted to absorb the excess quantities. The chief reason advanced by applicants for the proposed merger is that Amere, in the regulation of its retail operations by the West Virginia Public Service Commission, consistently has been unable to recover the full cost of gas purchased from Atlantic. Applicants recount, in their brief, the rate problems arising from differences between the rate requirements of this Commission and those of the State agency. These problems need not be detailed here other than to acknowledge that, for many years, the West Virginia Commission has permitted Amere to include in its cost of service only a portion of the actual rates charged by Atlantic, even though such rates had been approved by this Commission. The West Virginia Commission has based its action on two grounds, the first being that the gas supplied to Amere from the KA-20-inch line is either produced or purchased locally by United and there is no reason why United should not be the direct supplier of Amere and, secondly, their determination since 1953 that Amere should be merged into United. Since Amere would go out of existence under the merger, applicants cite the elimination of the costs of a separate corporation as an additional advantage of the proposal. Applicants also state that the proposed merger will place all the West Virginia retail distribution operations of Columbia's Charleston Group Companies under the sole direction and control of United, thereby resulting in considerable savings of time and effort in the solution of future rate, certificate, and financial procedures. The acquisition contracts contemplate that, upon consummation of the merger, United will conduct the intrastate retail business subject to the regulation of the Public Service Commission of West Virginia and the interstate business subject to the regulation of this Commission. The contracts also provide for United's adoption of Amere's existing interstate and intrastate gas tariffs, the commencement of the wholesale sale by it of natural gas to Bluefield Gas Company, and that United will assume and agree to pay, discharge or perform all obligations of Amere, excluding current payable and accrued taxes.

Although the merger of Amere into United is not one of the previously announced purposes in the corporate realignment program of Columbia in that it does not have the objective of achieving a complete separation of retail and wholesale operations in West Virginia,[11] applicants, together with the Commission's staff and Washington, contend that the proposal is a step in the direction of realignment in that it will achieve simplification in the overall corporate structure through the elimination of one company and the removal of problems related to dual regulation. Washington notes in this regard that the first Ohio Fuel Gas Company realignment proceeding, Docket No. G-9695,[12] recognized the propriety of a merger as here proposed as an initial realignment step.

We find that the proposed merger is in accord with the general effort of Columbia to reduce the number of operating companies serving its customers, thereby simplifying the system's operations by reducing bookkeeping costs and eliminating complex intercompany transactions of the very nature presently engaged in between Atlantic and Amere. Although the record does not fix a

[10] Sales by Atlantic to Amere were 2,949,850 Mcf for the year ending March 31, 1960.

[11] Two other Columbia subsidiaries, The Manufacturers Light and Heat Company and Cumberland and Allegheny Gas Company, not included within the Charleston Group Companies, also sell natural gas at retail in West Virginia.

[12] *Central Kentucky Natural Gas Company, et al.*, 16 FPC 437, 441.

precise dollar figure on the various economies, primarily regulatory and administrative, to be achieved, it does indicate that some savings in costs will result which will ultimately benefit the consuming public. In general, the record shows that there will be no change in applicants' business as now conducted in West Virginia and that the merger and acquisition of facilities will benefit the present utility customers and the public generally by providing a more efficient and economical operation. We conclude, therefore, that the merger of Amere into United is desirable as being in the public interest and should be approved.[12]

Transfer of Portion of Line KA–20 Inch and Line KB

Applicants allege that the merger of Amere into United and the change in ownership of Boldman is "inexorably linked" to the proposed transfer of Atlantic's transmission facilities in Kentucky and southern West Virginia. The factors favoring the transfer were stated as follows:

(1) United has done substantial exploration and development along the KA–20 line in Kentucky and West Virginia and, at the end of 1960, had 180 wells delivering gas into the line above Boldman Station, with an additional 44 wells scheduled to be completed in the next two years.

(2) The transfer of the line to United will reduce from twelve to one the number of United's delivery points to the KA–20 system of Atlantic. The last point at which United now delivers gas into the KA–20-inch line is 72.5 miles east of Boldman and 67 miles from the proposed new delivery point. Since Atlantic will be relieved from accepting widely fluctuating local production, it will be better able to schedule receipts from United and avoid the penalty provisions in United's contract demand tariff.

(3) United is better able to absorb the swings in local production and purchase operations, which Atlantic cannot rely upon to meet the firm requirements of its customers.

(4) As Amere's easternmost market is at the Virginia-West Virginia state line, approval of both the Amere-United merger and the transfer of the KA–20-inch line will enable United to own the complete transmission facilities to its retail markets. Conversely, if Amere is merged into United and United is not granted ownership of the line up to the Virginia border, United will be dependent on Atlantic for certain volumes of gas to supply the markets it will have acquired from Amere. Applicants contend that this would require additional arrangements for the exchange of gas between United and Atlantic and would create "still another rate problem involving greater complexities of intercompany operations than existed."

Although Atlantic's construction, prior to enactment of the Natural Gas Act, of the portion of Line KA–20 inch extending through West Virginia and into Kentucky may have been justified at that time as a necessary measure to secure natural gas service, its continued ownership of the line into the midst of the area of operations of United is inconsistent with the demarcation which has since developed between United and its other customers, each of whom is serviced at the perimeter of United's operations. The record shows that the service thus afforded these customers is preferential as against that provided Atlantic, particularly since the elimination in 1952 of the price differential on the sale of gas at Boldman which had operated as an offsetting factor, having been granted initially in apparent recognition of the fact that Atlantic took

[12] Applicants' policy witness testified that in addition to the present Commission action, approval of the merger would be necessary from the Securities and Exchange Commission and the Internal Revenue Service. The Public Service Commission of West Virginia approved the merger by order dated December 27, 1960, Case No. 5193.

delivery of field pressure gas at a point deep in the heart of United's operations and bore all the costs of compressing the gas and transporting it to market. The evidence further establishes, as with Boldman, that this part of the line currently is being operated by Atlantic in a manner governed almost entirely by the needs and characteristics of United's operations, notably the gathering of its locally produced and purchased gas. The large number of delivery points along the line and the introduction of varying quantities of gas at each point place Atlantic in an unfavorable position, unique among United's customers, wherein it is unable to schedule the receipt of a firm supply of gas for future periods sufficient to meet its customers' contract demands. Atlantic receives no reimbursement for the service it performs for United in accepting the local production along the KA–20-inch line. Each change in the line's operation and in the supply of gas furnished by United has resulted, in retrospect, in a lessening of the quality of service afforded Atlantic. While it is possible that no single alteration, if considered alone, would be adequate to support a finding of discrimination, the present examination reveals that a pattern of inequity has been created in the service rendered to Atlantic which can and should be remedied. The merger of Amere into United, which we herein approve as a measure calculated to advance the public interest, affords additional basis for the transfer of the KA–20-inch line to United. Moreover such merger, by eliminating differences as to rate requirements between the Public Service Commission of West Virginia and the Federal Power Commission, will resolve a long-standing conflict between State and Federal regulation, thereby advancing one of the fundamental purposes of the Natural Gas Act, namely to effectuate a coordinated system of State and Federal regulation, each complementing the other.

Approval of the application will reduce Atlantic's cost of service and will increase United's cost of service. However, it is not possible to transfer facilities without some shift in costs.[14] In our opinion, the benefits to be realized by the public amply outweigh the relatively minor adjustments in rates which will be made necessary thereby. We conclude that insofar as the transfer of Atlantic's KA–20-inch line and related facilities, inclusive of Boldman Compressor Station, situated within Kentucky and West Virginia and the merger of Amere into United are concerned, such acquisition and merger are required by the public convenience and necessity and should be authorized. In accordance with our orders approving the rate settlements in Docket Nos. G–20270 and G–20272 we shall require that the settlement costs of service made a part thereof be revised to reflect the transfers which we approve herein and, as so revised, be tendered for filing, subject to objections by interested parties and to approval by the Commission.

The Commission finds:

(1) United and Amere, West Virginia corporations having their principal places of business in Charleston, West Virginia, are "natural gas companies" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

[14] The exhibits in the record reveal that the combined effect of the acquisition and merger will be to increase United's jurisdictional cost of service by $775,680, or 0.17 cents per Mcf on a present average cost of gas sold at 42.54 cents. The overall financial effect on the Columbia System will be relatively negligible, with the changes in the costs of service being all but offset by commensurate changes in revenues. Moreover, although United's cost of service applicable to its interstate sales will be increased by $775,680, the greatest portion of this increase ($587,667) is due to the Boldman transfer, which transfer we have found is required to eliminate an undue discrimination on Atlantic. The net increase in the jurisdictional cost of service arising from the acquisition and merger exclusive of Boldman, as reflected in the exhibits here submitted, is only $188,013, or 0.04 cents per Mcf.

(2) Atlantic, a Delaware corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(3) The proposed abandonment by Amere upon the merger into and with United is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(4) The facilities proposed to be abandoned by Atlantic, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) The proposed abandonment and sale by Atlantic of the aforesaid facilities is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(6) The facilities proposed to be acquired and operated by United and the facilities proposed to be constructed and operated by United, as hereinbefore described and as more fully described in the application herein, will be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and the acquisition, construction and operation thereof by United are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(7) The acquisition, construction and operation of the facilities including the services provided as proposed by United are required for the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered.

(8) Applicants are able and willing properly to do the acts, and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(9) The public convenience and necessity requires that the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (d) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act should attach to the issuance of the certificate referred to in paragraph (7) above and to the exercise of the rights granted thereunder and that the time within which installation and acquisition of the facilities authorized by this order should be completed and the said facilities placed in actual operation shall expire on April 1, 1963.

The Commission orders:

(A) Permission for and approval of the abandonment by Amere, upon the merger into and with United, of the facilities hereinbefore described and as more larger fully described in the application and exhibits in this proceeding, are hereby granted to Amere.

(B) Permission for and approval of the abandonment by Atlantic, upon the sale to United of the facilities hereinbefore described and as more fully described in the application and exhibits in this proceeding, are hereby granted to Atlantic.

(C) A certificate of public convenience and necessity is hereby issued authorizing United to acquire, construct and operate the facilities and to perform the services hereinbefore described and as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(D) The general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (d) and (e) of Section 157.20 of the Commission's Regulations Under the Natural Gas Act shall attach to the issuance of the certificate granted in paragraph (C) hereof and to the exercise of the rights hereunder.

(E) United and Atlantic shall tender for filing, subject to objections by interested parties and to approval by the Commission, revisions in the settlement

costs of service approved by our orders of December 29, 1961 and February 19, 1962 in Docket No. G–20272 and our order of March 20, 1962 in Docket No. G–20270 as shall be consistent with the abandonment and acquisition of the facilities ordered in paragraphs (A), (B) and (C) hereof; and upon such approval the presiding examiner shall consider such revisions in costs in his determination of appropriate rate levels for the period commencing with the date of transfer of these facilities, except that the transfer of Boldman Compressor Station shall be held to have been effective as of April 5, 1960, as specified in the settlement agreements.

(F) Upon consummation of the project hereby ordered, United shall file the certificate required by Section 154.65 of the Commission's Regulations Under the Natural Gas Act adopting Amere's FPC Gas Tariff, Second Revised Volume No. 1, together with all effective contracts currently on file with this Commission applicable to the jurisdictional facilities to be acquired by merger and the subsequent wholesale service to be provided to Bluefield Gas Company; United shall also submit a notice of cancellation of its Rate Schedule No. X–7 as contained in its FPC Gas Tariff, Original Volume No. 2 and Amere's Rate Schedule No. X–2 as contained in Amere's FPC Gas Tariff, Original Volume No. 2, such rate schedules then being no longer operative.

(G) Upon consummation of the project hereby ordered, Atlantic shall submit a notice of cancellation of Rate Schedule No. X–11 as contained in its FPC Gas Tariff, Original Volume No. 2, such rate schedule then being no longer operative.

(H) United shall tender for filing, subject to approval of the Commission, a new service agreement with Zebulon Gas Association, Inc. and an adjustment in the existing service agreement with Atlantic reflecting the change in and unification of delivery points and the reduction of Atlantic's contract demand requirements occasioned by the merger of Amere and the transfer to United of the sale to Zebulon Gas Association, Inc.

(I) The time within which the facilities herein authorized shall be acquired, constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations, shall expire on April 1, 1963.

(J) Amere and Atlantic shall advise the Commission of the date of abandonment of the facilities within ten days of the date of such abandonment.

DECISION

UPON A JOINT APPLICATION FOR AUTHORITY UNDER SECTIONS 7(b), 7(c) AND 7(e) OF THE NATURAL GAS ACT

(Issued June 6, 1962)

JENSCH, *Presiding Examiner:* United Fuel Gas Company (United), Amere Gas Utilities Company (Amere) and Atlantic Seaboard Corporation (Seaboard or Atlantic) subsidiaries of The Columbia Gas System, Inc., (Columbia) filed a joint application on October 5, 1960, which was supplemented on December 9, 1960 and also on February 1, 1961, for authority pursuant to Sections 7(b), 7(c) and 7(e) of the Natural Gas Act, as amended, for permission and approval for Seaboard to abandon and to sell to its affiliate United, certain of its natural gas transmission facilities in Kentucky and West Virginia, specifically, to sell a 140-mile portion of, and presently unsegmented, 420-mile [1] long pipeline facility,

[1] As of March 31, 1960, approximately 19% of the total deliveries of gas made by United to its affiliate, Seaboard, are made through this facility. The major portion of deliveries by United to Seaboard is made through the Cobb-Rockville pipeline. Washington Gas Light Co. (Washington) is a principal customer of Seaboard's deliveries, and strongly urges that the Commission permit this intra-corporate transfer and sale of this portion of Seaboard's facilities. The effect of this transfer could reduce Seaboard's cost of operation and gas tariff rates for sale to Washington. Baltimore Gas & Electric Co., also a principal customer adds, without making a commitment to lower rates for its

subject to the juridcition of this Commission, and to terminate the wholesale sale and delivery of natural gas to Amere and Zebulon Gas Association, Inc. (Zebulon). The application also requested permission and approval for Amere to abandon, by merger with and into United, its natural gas transmission facilities and to terminate the wholesale sale and delivery by it of natural gas to Bluefield Gas Company (Bluefield). Relatedly, the application requested a certificate of public convenience and necessity authorizing United to acquire and operate the facilities proposed to be abandoned by Seaboard and Amere, to make wholesale sale and delivery of natural gas to Zebulon and Bluefield, and also authorizing United to construct and operate a measuring and regulating station for the wholesale sale and delivery of natural gas to Seaboard at the Virginia-West Virginia State Line at the terminus of the 20-inch transmission facility proposed to be acquired from Seaboard.

The facilities which Seaboard proposes to abandon and sell and United proposes to acquire and operate are described in the application as follows:

1. Approximately 139.5 miles of 20" gas transmission pipeline (designated herein as Line KA–20") extending in an easterly direction from Boldman Compressor Station, Pike County, Kentucky to the Virginia-West Virginia State Line.

2. Approximately 12.6 miles of 4" gas transmission pipeline (Line KB) extending in a southerly direction from a point of interconnection on Seaboard's Line KA–20" to the Virginia-West Virginia State Line near Peterstown, Monroe County, West Virginia.

3. Boldman Compressor Station situated in Pike County, Kentucky, consisting of two (2) 2,000 horsepower and two (2) 1,000 horsepower gas engine driven compressor units, together with all piping, auxiliary equipment, structures and properties appurtenant thereto and utilized in connection with the operation of Boldman Compressor Station.

4. Huff Creek Compressor Station situated in Wyoming County, West Virginia, consisting of one 880 horsepower and two 800 horsepower gas engine driven compressor units, together with all piping, auxiliary equipment, structures and properties appurtenant thereto and utilized in connection with the operation of Huff Creek Compressor Station.

5. Flat Top Compressor Station situated in Summers County, West Virginia, consisting of four 800 horsepower gas engine driven compressor units, together with all piping, auxiliary equipment, structures and properties appurtenant thereto and utilized in connection with the operation of Flat Top Compressor Station.

Amere proposes to abandon and United proposes to acquire all of Amere's natural gas plant by merger, which plant consists primarily of distribution facilities located in three separate areas contiguous to Seaboard's 20-inch pipeline in West Virginia. The applicants propose no abandonment of the services presently rendered by Amere's existing facilities as a result of the proposed merger, but following such merger, all of Amere's existing services will be continued by United.

The estimated cost of the proposed measuring and regulating station will be $49,000, which United proposes to finance with cash generated from opera-

---

service, that the transfer will "inure to the benefit of the ultimate consumer of gas." Other customers affected by this joint application could have increased rates based upon the showing that United's cost of service would be substantially increased if this joint application were granted. To be noted throughout, there is no evidence of operational cost savings to the applicants, and no evidence of any substantial improvements in service; the evidence is certain that there would be a shifting and adding of costs to western customers of United. In addition, the costs to United's retail West Virginia distribution customers would be increased.

tions. United proposes to finance the merger of Amere by issuing such number of shares of United's capital stock as shall equal the par value of Amere's outstanding capital stock. The installment promissory notes of Amere will remain unchanged by virtue of the merger and will become the obligation of United. Further, United proposes to reimburse Seaboard for the assets and properties secured by the issuance of installment promissory notes in an aggregate principal amount equal to the value of the assets acquired. Seaboard will then deliver such notes to its parent, The Columbia Gas System, Inc., as prepayment of an equal amount owed by Seaboard to the parent company. The net book value of these assets was $6,378,896 as of December 31, 1959.

It is the position of applicants that a granting of their proposal would be in the public interest, because the proposed merger of Amere, primarily a retail distribution company, into United will eliminate Amere as a separate corporate entity, presently subject to the jurisdiction of both this Commission (by its sale of gas to Bluefield Gas Company and on occasions to Seaboard) and the West Virginia Public Service Commission. The dollar effect or advantage[2] of such a change could not be measured according to the evidence from applicants. Applicants also state that the proposed merger will place all the Charleston Group Companies' retail distribution operations in West Virginia under the direction and control of a single operating subsidiary, resulting in attendant operating economies, the amount of which, however, could not likewise be described in measures of dollars. The term: "Charlestown Group Companies" is used in order to distinguish other retail operations conducted by Columbia in West Virginia through other subsidiaries, not concerned here, namely: The Manufacturers Light and Heat Company and Cumberland and Allegheny Gas Company. Applicants further claim that the proposed acquisition of transmission facilities by United from Seaboard, will likewise unitize into a single operating subsidiary (United) those facilities which are directly related and utilized in Seaboard's existing wholesale sale to Amere, thereby eliminating the separate ownership of transmission facilities between United's existing retail market and those to be acquired from Amere. United pointed out, however, that Seaboard has other substantial transmission facilities which are not affected by the project set forth in this joint application, in that Seaboard owns a large transmission line extending from Clendenin, West Virginia across West Virginia and Virginia to Rockville, Maryland, and in addition, Seaboard would retain a substantial or the larger portion of the transmission line which is affected by this project.

By order of the Commission of August 21, 1961, the following parties were permitted to intervene: The Dayton Power and Light Company, Lynchburg Gas Company, City of Pittsburgh, Pennsylvania, Washington Gas Light Company (WGL or Washington). Baltimore Gas and Electric Company, The Manufacturers Light and Heat Company,[3] The Ohio Fuel Gas Company,[3] and Commonwealth Natural Gas Corporation.

[2] Washington Gas Light Company was wont to term this change by Columbia in corporate structure as "streamlining", but like United could not assign any dollar advantage to the transaction.

[3] These intervenors are also subsidiaries of The Columbia Gas System, Inc., and affiliates of the applicants. In their separate petitions to intervene, allegations were made that this project would result in some increase in United's jurisdictional cost of service and petitioner(s) ". . . desire to be fully informed in all aspects of this proceeding and to protect its interests." After the Commission granted intervention and after entering their appearances at the call of the case, there was no further activity of record in the case to ". . . protect its interests." Cincinnati adds: "It is perhaps significant that neither Manufacturers nor Ohio Fuel gave any indication of approval of the proposals."

Notices of intervention were filed by the Pennsylvania Public Utility Commission and the Public Service Commission of West Virginia and both were represented by counsel at the hearing.

Each of said customer intervenors obtains its supply of gas from either United or Seaboard, which purchases gas from United, or from both United and Seaboard, with the exception of Cincinnati Gas & Electric Company (Cincinnati) and the Union Light, Heat and Power Company, which latter companies receive their supplies of natural gas from Kentucky Gas Transmission Corporation,[4] which in turn receives its supply of gas from United. Cincinnati is also a major wholesale customer of The Ohio Fuel Gas Company (Ohio Fuel), which in turn also purchases a major portion of its gas from United. The Dayton Power Light Company (Dayton) purchases substantially its entire natural gas supply at wholesale from Ohio Fuel, which company purchases from United a substantial portion of the gas which is sold to Dayton.

Customers of United, such as Cincinnati and Dayton, contended that the granting of the application would result in an increase in United's cost of service, (and this is admitted by United) and, therefore, would ultimately result in increased costs of gas supplied to them. In addition, the Pennsylvania Public Utility Commission and the City of Pittsburgh oppose the applications. Washington, Baltimore, and Commonwealth favored the application but did not stress the lower costs of service to be had by their gas supplier, Atlantic. The West Virginia Public Service Commission, at the outset of the hearing, stated that it supported the application, but after the hearing, and significantly after hearing that rates in West Virginia for United's retail customers would be increased[5] if the application were granted, filed no brief after the conclusion of the proceeding.

The matter was heard, pursuant to due notice, on October 9, 12, November 13 and 14, 1961 and on January 9 and 10, 1962. Thereafter, briefs were filed, the last on April 2, 1962.

As stated, applicants are wholly-owned subsidiaries of The Columbia Gas System, Inc. United is engaged in the sale of gas to approximately 119,000 residential, commercial and industrial customers in the State of West Virginia. It also sells gas for resale in West Virginia. It sells gas in Kentucky at wholesale to intrastate utility customers and sells gas in Ohio to an industrial customer. In addition, United sells gas at wholesale to other utilities for resale in West Virginia, Kentucky, and Ohio. It is also engaged in production, purchase, transmission, underground storage, and distribution of natural gas.

[4] Some of the sales made to Kentucky Gas Transmission Corporation are physically made by deliveries by a southwest gas supplier, Columbia Gulf Transmission Corporation, into facilities owned by Kentucky Gas, and despite the lack of ownership by United of any physical equipment, not even a metering station, the sales and accounting techniques, used for these deliveries, record the sale to Kentucky Gas as made by United Fuel Gas Company, presumably to achieve a better load factor on the take of gas. The lack of ownership of facilities, however, adds to the general complexity of Columbia intracorporate sales to affiliates and separate rates, with one affiliate's costs added to another's. Dayton Power & Light disputes the alleged advantage of United's load factor, since Dayton's gas is funnelled through another Columbia system subsidiary, Ohio Fuel Gas Company, which, by the use of storage fields, already has a high load factor for its takes of gas.

[5] United has retail service in approximately 112 towns in West Virginia. The net effect of a granting of this application for service in that State would be no indicated reduction in service costs to towns served by Amere, and an increase of rates in the 112 towns served by United. The advantages to West Virginia service do not seem clear; it may be that the West Virginia Commission had not recognized the increase to United's customers when it asserted its position in this proceeding. The towns affected would include: Charleston and South Charleston, Huntington, Kenova, McConnell, Mt. Union, Nitro, St. Albans, Silverton, and Williamson.

United produces and purchases natural gas from local fields in West Virginia and Kentucky and also purchases gas in these States from Tennessee Gas Transmission Company. United makes other purchases in southern Louisiana, which are transported by Columbia Gulf Transmission Company, an affiliate. United operates 16 underground storage pools in West Virginia. In summary, as the West Virginia Public Service Commission has described it, United is the main supplier of gas for the entire Columbia system.

Seaboard proposes to transfer approximately 139.5 miles of its 420-mile, KA 20-inch line to United. The entire length of the 420-mile line extends from Boldman, Kentucky, to the Maryland-Pennsylvania State Line. The portion proposed to be sold to United extends from Boldman Compressor Station in Pike County, Kentucky, across the southern portion of West Virginia to the Virginia-West Virginia State Line. Seaboard also owns and operates a 20-inch line extending 262 miles in an easterly direction from Clendenin, West Virginia, to a point near Rockville, Maryland. The 20-inch line and the 26-inch line are connected by a 24-inch line extending from Seaboard's Lost River Compressor Station, a distance of 49 miles in a southerly direction to Seaboard's Bickers Compressor Station in Greene County, Virginia. Seaboard also owns and operates two storage pools, which are connected to its 26-inch pipeline.

Seaboard receives the major portion of its gas supply from United. It also purchases small volumes from producers in West Virginia and Kentucky close to its 20-inch and 26-inch lines, and from Transcontinental Gas Pipe Line Corporation in Virginia and Maryland. In addition, Seaboard purchases from Amere (which is now an affiliate but previously was a subsidiary of Seaboard) locally purchased gas in the Beckley-Mullens area produced in excess of Amere's requirements in that area.

The gas deliveries by United to Seaboard and the operations of Boldman provide for gas entering the suction side of the Boldman Compressor Station.[6] This is gas which has been purchased or locally produced in or around the Boldman area. This gas is compressed and discharged into United's 12-inch line for transportation westward ultimately to United's Beaver Creek Compressor Station. Other gas entering line KA-20-inch near Boldman is gas which has been purchased by United from Kentucky-West Virginia Gas Company. The

[6] The complex character of this gas intake, gas sale, delivery westward and exchange arrangement can be observed from the applicant's policy witness who described the multi-contract procedure as follows:

> Atlantic Seaboard purchases from United Fuel the gas on the suction side, or the injection side of Boldman Compressor Station and exchanges it with United Fuel gas that will come from Beaver Creek Station (which is westward from Boldman), over to Boldman in exchange for that gas, so I would say that the gas belongs to United Fuel once it is delivered back to United Fuel on the outlet side of Boldman Compressor Station. [Parenthesis added.]

It appears that Seaboard compresses gas to move it westward. This gas is treated in a processing plant. When processing operations are not in progress, the gas delivered into Boldman may move immediately eastward, although how often this occurs was not definitely established. United compresses gas at its Beaver Creek Station, and generally, it is this gas from the Beaver Creek Station that is delivered to Seaboard and if traceable (assuming intermediate markets do not absorb it all) ultimately to Washington.

One phase of this transferring of title to gas at Boldman (first from United to Seaboard, then after compression, from Seaboard back to United) is not clear in this record in reference to the various processing procedures: Seaboard purchases gas from United Fuel at Boldman, as indicated, but this gas moves westward where it ultimately is processed, the evidence is that ". . . United Fuel not only doesn't receive any benefit from that . . ." A possible inference may be that some other Columbia subsidiary does benefit from the processing revenues. If United Fuel does not receive any benefit from that processing, and yet adds volumes of gas to Seaboard to compensate for difference in Btu value of gas exchanged, it may be that Seaboard's cost of service could reflect the benefit from the processing operation, to justify the compressing gas costs which are complained of by Washington.

liquifiable hydrocarbons from this latter stream have been extracted by the seller. This gas is transported by United from the vicinity of the Beaver Creek Compressor Station to a point near the discharge side of Boldman through United's 20-inch line.

There has been no showing that the direct connection between Boldman and line KA-20-inch has been used since prior to March 31, 1959, nor is it contemplated by the applicants to utilize this connection in the near future. The only time this connection would be used would be at a time of extreme emergency along Seaboard's 26-inch line from the Cobb Compressor Station to the tie-in between Lost River Compressor Station and Bickers Compressor Station.

While the participants in this proceeding have carefully designated the separate companies in the Columbia system by their respective names, the effect may be, in some instances, to regard the separate entities as if they were unaffiliated organizations. That is, Washington asserts that both the Boldman Compressor Station and the portion of the KA-20-inch line sought to be transferred are really operated for the benefit of United and not for the benefit of Seaboard, and therefore should be transferred to the former. These considerations cannot be separated from a recognition of the manner in which the Columbia system of companies operates. This record indicates, by the references made in the proceeding to the Columbia "blue book", which contains the computations of gas supply requirements and the proposed methods of delivering those supplies, that while all of the Columbia companies may not be entirely or completely operated as a unit in order to efficiently "pool" all of the gas supply on the entire Columbia system in order to supply the various kinds of customer requirements, (whether these occur in Ohio, Pennsylvania, West Virginia, Maryland, Virginia and New York), the record in this case does establish that the supply of gas that comes into United Fuel, as one subsidiary, is a pooled supply of gas in that it goes to all of the customers of United Fuel, which include Ohio Fuel Gas and Manufacturers Light & Heat Company, which are substantial interstate transmission companies, and also Columbia subsidiaries. It appears that the title and ownership of the gas pipeline facilities are immaterial in such operations.[7] It is also important to note in connection with the complex Columbia system that endeavors are being made, without any specific timetable for West Virginia operations, however, to generally separate, into distinct corporate entities, the retail from the transmission operations. Admittedly, that concept of corporate realignment is not proposed in this proceeding. This proposal has been described, more often by Washington, as a "stop-gap" proceeding, as if it were an interim arrangement, but not even United, nor any evidence from any Columbia subsidiary evidence could indicate what the ultimate proposal would be, nor how this proposal would be as a stop-gap. In fact, this proposal being contrary to the general realignment program, if it were to be granted, may constitute a hindrance or a block to further progress in West Virginia. Consistent with the statement made on the record in these proceedings, official notice may be taken of prior proceedings involving previous Columbia's merger proposals. These proceedings also reflect many of the operations which are used by Columbia

[7] In United's brief, the following statement is made without any record references which are given for most assertions in that brief:

> The separate ownership of Atlantic's 20" transmission facilities has, in at least one instance, created substantial difficulties to both United and Atlantic: first, in connection with Atlantic's estimating its gas requirements, and second, in connection with United's providing Atlantic's gas requirements.

This statement in the brief is to be contrasted with the evidence given by United's witness: "These particular problems of operational problems we have been living with, they haven't been impossible . . ."; at another point, United's witness testified: "There is no problem of handling the gas. It could still be handled and as I stated, *there would be no change of operations coincidental with change of ownership.*" [Emphasis added.]

to direct the movement of gas supplies in, and among, its various affiliated companies, according to emergency needs and other requirements of the customers served by the Columbia affiliates. Thus, it may be accepted that, as a general rule, the use of the facilities of any one of the affiliates is guided, in part, by the over-all Columbia System requirements, and relatedly the use of facilities will be modified and changed from time to time by system needs. As a conclusion, the particular use made, in a specific period, of the facilities of any one affiliate cannot be wholly accepted as the definitely established pattern of operation. The changes made, perhaps day to day, or year to year, will reflect different modes of use. The Columbia system operations reflect many illustrations of the varying patterns of operation, some dictated by the developments arising in the course of history, including the shifting sources of gas supply, the reanalyses made of gas content for processing purposes, and the changing needs in different areas served by the Columbia System companies.[3] Due to such changing operations over the course of years, the costs utilized for rate purposes in Columbia System cases are related as accurately as possible to the uses made of the various company facilities. To this extent, the fact that the KA-20-inch pipe line, involved herein is used in a particular period of time for a specific use, among other major uses, for a company not owning the KA-20-inch line, requires a cost analysis to formulate the reasonable rates needed in order to assign the burden of payment according to the use. It does not appear therefore that such an approach for cost analysis for rate purposes necessarily requires transfers of ownership of facilities, when to do so will add to the costs of other customers of the Columbia System companies which are not attached to, nor served from the KA-20-inch line.

While United and the other applicants herein speak generally of the corporate realignment program, and admit that the instant proposal is not consistent with that program, the insistence by Washington that the instant proceeding should be considered as a part of the program, warrants some reference to the precise endeavor undertaken. The principle said to govern the program has been stated as follows:

> The principle used, and which we plan to follow in making further segregations in separating our property between retail and wholesale business—I want to make perfectly clear that this is not the matter of separating distribution from transmissions—but our objective is to segregate our retail business from our wholesale business.
>
> The distribution company should own the laterals or other property, bringing gas to it from the major transmissions system, back to the nearest possible point on that transmission system which will not involve distribution company ownership of lines transporting gas for sale in interstate commerce, or gas for wholesale sale or any major volume of local production or purposes. [See: Central Kentucky Natural Gas Company, G–9689, G–9684 and G–9685, *et al.*, May 21, 1956.]

Specifically respecting the instant proposal, United's principal witness has urged that the application be granted for several reasons, one of which being

[3] To this extent, the reference made by United and Seaboard, and the repeated emphasis by Washington, that Seaboard is historically only a transmission company, cannot be accepted as an absolute prohibition to any change in operations to prevent Seaboard from absorbing its previous subsidiary, but now affiliate, Amere, in order to engage in retail operations, if permitted by the Securities and Exchange Commission, which is continuing its considerations respecting the proper corporate alignment of the Columbia System. Whether the instant proposal meets with the approval of the Securities and Exchange Commission was not even indicated for this record; perhaps, its views should be received before changes in ownership, with no operational necessity therefor, are proposed as herein.

that the West Virginia Public Service Commission has suggested[9] that Amere be merged into United, in view of Amere's complaint to that Commission that Amere was not fully recovering its entire cost of service in the rate proceedings before that State Commission. United's witness added, however, that a merger of Amere into United would not be a complete solution and generally discussed the problems, as follows:

> Actually, careful consideration has been given, from time to time, to the Commission's (West Virginia Commission) recommendations but there were a number of obstacles. First, in integration proceedings before the Securities and Exchange Commission under the Holding Company Act, that Commission ruled that certain subsidiaries of Columbia constituted an integrated system and could be retained by Columbia and certain other companies must be disposed of.
>
> The Commission did not then and has not yet ruled as to the retainability by Columbia of certain companies, including Atlantic[10] and Amere.
>
> Up until December 31, 1953, Amere was a subsidiary of Atlantic, and Atlantic was thereby a sub-holding company. The proposed transfer of ownership of Amere from Atlantic to Columbia was without prejudice to the integration proceedings.
>
> *Secondly, the merger of Amere into United Fuel would not in itself be a complete solution* to the problem being considered by the Public Service Commission of West Virginia because of the intervening facilities owned by Atlantic. Since the markets being served by Amere are now and have always been dependent upon the 20'' line of Atlantic for their gas supply, *Atlantic would have to be compensated for the transportation. This would have created still another rate problem involving greater complexities of inter-company operations than existed.*
>
> Thirdly, the Columbia Gas System has been for several years working on a program of property realignment with the ultimate aim that of realigning the system operations so that all distribution operations in one state would be carried on by an individual company subject only to the regulatory commission in that state, and the interstate operations be carried on by a transmission company subject to the jurisdiction of the Federal Power Commission.
>
> We have been working on that problem in West Virginia. We had hoped to accomplish the combining of the distribution operations of Amere and United as a step in our overall realignment program, but at the present time there are too many unanswered questions to go forward with that phase of realignment programs.
>
> However, in view of the growing problems concerning Amere, Atlantic, Seaboard and United Fuel we are proceeding on the basis of the proposals contained in the application as filed in this proceeding.[11] [Emphasis and parenthesis added.]

[9] The initial reference to a merger was made in 1953; United presented in this record an order of the West Virginia Commission approving, for intrastate purposes, a merger of Amere into United, this order was issued in 1960.

[10] If the Securities and Exchange Commission has not yet ruled on retainability of Seaboard by the Columbia system, the position of Washington is more understandable in its effort to avoid any possible "unaffiliated with Columbia" ownership of Seaboard, of the facilities whose cost of service may affect Washington's purchased gas cost, and thus Washington may hope to place most of the facilities in United's ownership.

[11] United presumably recognizes that the application filed herein is no answer to its problems, and that more difficulties than presently exist may arise if the application is granted, but apparently from some urging, the application was filed to have the present considerations answered one way or another.

United's witness in his references to the Columbia System realignment program has differentiated the instant proceeding from the system endeavor. In the foregoing statement, the witness would not characterize the instant proceeding as in anywise a desired part of the corporate alignment; and thus, while Washington and Baltimore, which stand to gain by lesser costs of gas service,[12] apparently urge that even if there be defects and insufficient public interest considerations to entitle the United project to acceptance, nevertheless urge that the project be accepted as an interim or "stop-gap" arrangement. If United, however, has concluded that with such substantial additions to its interstate cost of service, as well as increase in rates to its retail customers in West Virginia, there will be "greater complexities in inter company operations than existed" the "stop-gap" argument of Washington and Baltimore cannot be accepted and is rejected as contrary to the record.

The complaint by United and Amere that the latter is not receiving, and has not been permitted to receive, its full cost of service in the rate proceedings before the West Virginia Public Service Commission warrants greater analysis than reflected by the efforts of the parties to this proceeding. Throughout the hearing, the contention has been made that that State Commission has refused to recognize the tariff rate prescribed by the Federal Power Commission for Seaboard's rates to Amere, and that the latter's property has hereby been confiscated in violation of the United States Constitution. Compounded with that assertion, is the reference to two proceedings seeking *certiorari* from the United States Supreme Court to convey the impression that that Court, by a denial of the petitions, has permitted the confiscation, and has denied the supremacy of the federal law over State regulation. Such a shocking charge requires a complete analysis of the State Commission and State Court proceedings, as well as those in the United States Supreme Court. The analysis refutes the charge of confiscation, and in addition indicates that United and Amere, with the kindly guidance of the Columbia System control can adopt some "self-help" procedures,[13] by rearranging or realigning their gas supply contract arrangements that will substantially, if not completely, end their claims of confiscation.

The initial order of the West Virginia Commission, as made available by United, but which is also shown in the record of proceedings in the United States Supreme Court, of which official notice has been taken, shows conclusively that the amount of dollar difference, claimed by Amere and the adjustment made by the State Commission, is resultant from the treatment given to a gas supply arrangement between unaffiliated Columbian Carbon, as a seller, and its separate gas supply contracts with Amere and Seaboard. The State Commission asserted that since Amere and Seaboard were affiliates, a single contract could be executed and let deliveries vary according to needs of either such user, but desig-

[12] Significantly, Washington, as a part of its contentions respecting the public interest involved in these proceedings, makes no commitment to pass any reductions or savings on to its consumers.

[13] To the credit of the presentation by brief made by United, Amere and Seaboard, if not to that of the participant intervenors in this proceeding, has been the recognition that United and Amere know that changes can be made to end the complaint of confiscation. United asserts: "Applicant's only recourse is to change the existing framework to comply with orders of West Virginia Commission."

While United does not define the "framework", the order of the West Virginia Commission does by reference to the gas supply contracts. It is to be noted that careful language is used earlier in the United-Amere brief to state: "It is obvious that Amere has done everything possible to resolve the above situation; the only step left is the merger of Amere and United." It may be that Amere cannot do more without Columbia's control being used to make the change, and the "only step" as used in the brief, may not be intended as the only solution. The language is precise; the context, however, may be somewhat confused.

nate Amere as the buyer, in order to achieve a larger volume purchase. The State Commission asserted that this did not seem like a novel procedure for the Columbia System Companies, which already had an arrangement applicable even in West Virginia. This arrangement concerned Manufacturers Light & Heat Company and Cumberland and Allegheny Gas Company. This contract arrangement provided for an exchange schedule of gas deliveries, which if applicable for Amere and Columbian Carbon, would permit Amere and Seaboard to exchange gas from the deliveries made by Columbian Carbon. Such an exchange schedule would thereby lessen Amere's cost, as set forth in the West Virginia Commission's order, in an amount disallowed in Amere's cost of service. The reduction made by the State Commission was made in reference to that gas supply cost, only, and while some averaging of all costs might show less allowance for Seaboard's rates which governed sales to Amere, such averaging was apparently regarded as a confusion of the figures, rather than a consideration of the issue decided by the State Commission. The State order set forth this issue in detail, and invited Amere to present evidence that this supply arrangement was not feasible nor possible, and offered to keep the record open to afford every opportunity to Amere to consider the issue further with the State Commission. Amere's sole response was limited apparently to its own contention, not supported by evidence from Columbian Carbon, that that seller would not contract solely with Amere, and presumably needed Seaboard's financial credit for the large gas supplies involved. It is to be inferred that from the State order, that that Commission concluded that affiliates in the Columbia System could arrange the necessary "paper work" to develop the self-help procedure to avoid confiscation.

Despite that analysis by the State Commission, and its suggestion of a means to lower the costs of service for state users of Amere gas, as well as its offer to leave the record open to consider the matter further, Amere moved on and filed proceedings in the State Court and Supreme Court in order to change the State Commission order. The Amere petition for *certiorari* in the United States Supreme Court was redundant concerning claims of confiscation, and the contentions and citations to cases permitting utilities to recover their costs of service and a fair and reasonable rate of return. There were two petitions for *certiorari;* the second was apparently not even answered by the State authorities according to the record on file, and the Supreme Court decided for both petitions that no substantial federal question was presented. In opposition to the first petition for *certiorari* filed by Amere, the State attorneys, in their brief, specically pointed out that there was not any conflict respecting allowances for Seaboard's Federal Power Commission gas tariffs in Amere's cost of service, and stated:

> The action of . . . Commission did not purport to deny or usurp the jurisdiction of Federal Power Commission to approve tariffs of Atlantic . . . (but did hold) that it was . . . unreasonable (for Amere) to purchase gas from its parent company (Seaboard was then parent to Amere) at high costs when other sources of supply and methods of acquisition were available . . . at substantially less costs. (Parenthesis added.)

In addition, the brief in opposition stated:

> It (Public Service Commission) merely pointed out the abuses of the affiliated relations and how they might be corrected, and that correction must be found or good cause shown . . . The Commission's recommendations, if followed by Amere, would not divert or interfere with the flow of gas in interstate commerce . . . The burden of proof was upon Amere. In transactions between affiliates, the burden of proving reasonableness rests heavily

upon the utility . . . This it failed to do. (Parenthesis added.) [Brief in opposition by Attorney General of West Virginia to Amere's petition for *certiorari*, 347 U.S. 910.]

The "other methods" of acquisition had been described in the State Commission order by reference to a gas cost from Columbian Carbon ranging from 22.5 cents to 24 cents, and the charge made by Seaboard to Amere at 62 cents per Mcf. The State Commission did not believe it reasonable for Amere to pay a cost for gas that could be delivered directly to Amere, rather than adding an affiliate's, or then parent company's cost of service in addition.

This extensive reference has been made to show the principal determination in the State Commission order. By way of a conclusion, in a consideration of many other contentions by Amere, the State Commission added that merger ". . . would seem feasible . . . and thus solve the problems that arise from intercompany sales." It appears that the principal determination was to have gas delivered directly by a gas supplier to Amere. Following the several State and United States Supreme Court proceedings, Amere proceeded with the merger proposal instead, and apparently has not yet acted on the determination respecting gas supply costs and deliveries.[14] Upon the basis of that record, the contentions made in this proceeding concerning confiscation are denied, and rejected as not justified by the evidence, and furthermore this claimed necessity for a merger does not constitute a showing in the public interest to warrant a merger by Amere into United as proposed herein.

The second project involved in this joint application is the proposal to transfer the Boldman Compressor Station from Seaboard's ownership to United. Several reasons are assigned principally by intervenors Washington and Baltimore, one being that in a rate settlement proceeding, a sum of $500,000 was paid (presumably toward the costs of the operation of Boldman) by United to Seaboard, and with that agreement, the participants in an early rate proceeding reached a settlement. This record reflects the insistence by Washington[15] to require United to pay $500,000 to Seaboard for the operation of Boldman. Upon the basis of that compromise and settlement, approved by the Commission, Baltimore urges that all participants herein recognize that the Boldman station should be transferred from Seaboard to United, despite the fact that the settlement statement excluded any commitment to that position, and reserved the rights of rate settlement participants to object to any such proposal. It has been commonly recognized that compromise and settlement dispositions are not evidence of the merit of the positions concluded, and no reason has been shown to disregard that principle of law, even though Baltimore goes to the extent of asserting:

---

[14] Perhaps a realignment of gas contracts would be more helpful to Amere than further transfers of ownership of facilities among Columbia subsidiaries; this may be the "framework" for compliance that United and Amere recognize in their brief.

[15] United's policy witness testified:

> They (Washington) have over several years contended that Boldman should be owned by United Fuel. They also said or contended that the 20-inch line of Seaboard is operated for the benefit of United Fuel as a gathering line, and I don't agree with that contention at all . . .

The witness further indicated that this proceeding was at least an endeavor to relieve the constant pressure by Washington on United:

> . . . because all of the gas injected into the 20-inch line at these various points east of Boldman are injected at pressures sufficient to, as we say, buck the pressure out of Boldman, but nevertheless whether it is a fact or whether it isn't *I just suspect that if we don't do something about it, it will just be a problem that we will have in rate cases from here on.* [Emphasis added.]

A possible inference is that United has a problem from these contentions of Washington, and while United does not agree with Washington on the argument concerning a "gathering line", for instance, perhaps among others, United has concluded that if this Commission does not decide the argument, it will go on.

> Since the Commission has indicated approval of the transfer to United of costs relating to Boldman for purposes of the rate settlements [16] in the aforementioned Dockets, it is reasonable to conclude that it would likewise approve and favor the transfer of ownership of Boldman from Atlantic to United.

The aspects of the aforesaid rate compromise and settlement will not be considered as persuasive in this proceeding.

The Boldman Compressor Station, aside from the rate settlement proceedings, has been a principal concern of Washington in this proceeding. Washington has urged at some length the alleged disparity in compression service rendered by United to other interstate customers, albeit affiliates, and the alleged lack of compression furnished by United to Seaboard at or near Boldman. Washington contends that this is patently discriminatory, and a violation of Section 4 of the Natural Gas Act. To consider specifically this charge of a Section 4 violation, Cincinnati presented some evidence which it contended proved a discrimination by United to it, through another Columbia subsidiary (Kentucky Gas Transmission Company) and thus apparently urges that the discriminations are even in number, and both can be disregarded. It is concluded, on this record, that a Section 4 discrimination proceeding would encompass more than the evidence and allegations set forth in this Section 7 proceeding. While the public interest requirements of a Section 7 proceeding are broad, and care must be exercised to be certain that no illegality or discriminatory practices are present in a determination awarding a certificate issued as required by the public convenience and necessity, some operations may be convenient and necessary for the public, while other proceedings may be needed to remove aspects of discrimination. The determinations made herein are based upon the requirements of public convenience and necessity of Section 7 of the Natural Gas Act.[17]

This record contains references to the historical background of the construction and use of line KA-20-inch and the Boldman Station. The line was constructed about 1932, and for a considerable period of time served as the only facility by which Seaboard delivered gas to Washington. As United explained the development, after construction of the line, it was a "logical conclusion" that the compressor station at Boldman should be constructed and owned by Seaboard. United indicated that this "logical conclusion" was made before the enactment of the Natural Gas Act and its attendant regulation. Later, when it appeared to Columbia's management that the gas delivered to Seaboard might first be processed in order to remove the hydrocarbons, a so-called exchange arrangement was developed whereby the gas, while purchased by Seaboard at Boldman Compressor Station, is passed through the compressors and then is transported westward, and somewhere shortly after this compression, United concludes title to the gas returns to it (the contracts are not in this record to support this "passing of the title" from United to Seaboard before the compressor station, and transfer back to United after the compression has occurred). In

---

[16] There appears to be some conflict between the intervenors, Washington and Baltimore, concerning the significance of a compromise and settlement in a rate proceeding as a precedent for future determinations, with Washington asserting at the hearing: ". . . what the parties agree to in settling a rate case has no bearing upon what the final and ultimate facts might be . . ."

[17] United's counsel contends to the same effect and stated:

> I didn't infer from Washington Gas Light's discussion yesterday, sir, that there was any question of discrimination of service in this case. This is a Section 7 proceeding. We are not under Section 5 (*sic*) of the Act. We have had no notice of any discrimination of anything of that nature . . .

Washington's brief, however, argues discrimination on Page 7 by its quote: ". . . Here is a discrimination which is prohibited by the Act . . ."

any event, this shifting-title-gas goes up to Kenova, West Virginia for extraction at a plant owned by United. The adequacy of that payment for the gas that once was in the title of Seaboard was not presented for this record. While all participants herein referred to United's gas transaction at Boldman as an exchange, the gas that actually moves eastward from Boldman in the KA-20-inch line is gas that United, in fact, transports, after a processing plant has extracted hydrocarbons, in quantities to compensate for loss of Btu in the exchange, over to Seaboard's transmission line on the outlet side of Boldman. In view of the processing by United of the gas, once delivered by United to Seaboard, and the title to which United believes it gets back on the outlet side of the station, the so-called exchange aspect of gas can be disregarded, except insofar as needed to measure quantities in amounts compensated for loss of Btu for delivery to Seaboard. There is no direct relationship, except to measure amounts, between deliveries into Boldman, and the quantities which physically flow in the KA-20-inch line.

Washington complains that the effect of all these gas deliveries, title transfers, and exchanges is that the gas received by Seaboard is uncompressed gas.[18] A proper cost analysis of this exchange service appears to be necessary; and though not considered at the hearing, an inquiry might be made concerning the revenues received for extraction and processing of the gas sold by United, but which United ultimately processes. The inquiry might also include whether, since Seaboard took title to this gas at Boldman, Seaboard would have a right to the revenues from the extraction process up at Kenova, and the ultimate sale thereafter.

Since it appears without contradiction that United does compress the gas that actually goes into service in Seaboard's KA-20-inch line, there appears to be present the same type of complex contract arrangement between affiliates that the West Virginia Commission sought to improve. The gas in service in the instant proceeding is compressed (which Washington denies in its reliance upon the form, but not the substance of this affiliate contract complexity or confusion). This record indicates a need for United to pay Seaboard for the compression cost on the gas which United processes at Kenova. The gas which is processed is handled at all times as United's gas exclusively; it is only when the gas needs to be compressed is it regarded as Seaboard's. This is a sacrifice of substance to form, as the affiliates have done by their contracts.

The processed gas compression cost at Boldman is a separate transaction from the compression activity at Beaver Creek for two different kinds and quality of gas are concerned; only by the character of the contracts that these affiliates have executed has the confusion resulted in placing title to the gas in Seaboard solely for the purpose of going through the compressor station, but such self-made difficulties cannot be used to load $800,000 of additional costs on United's customers located westwardly from Boldman, such as Dayton and Cincinnati, and at the same time endeavor to give a windfall to Washington and Baltimore by lowering the costs of their gas supplier. Clearly, this cannot be identified to be a Columbia System corporate realignment program. In the same manner that the West Virginia Commission recommended, it likewise appears herein that these affiliates can execute new contracts to reflect the transactions which

[18] The participants herein have referred to the pressure of the gas delivered by United to Seaboard for ultimate delivery to Washington, for instance, as uncompressed gas, despite this testimony from United's witness:

Q. So at the time of the eastward movement of the gas that goes for Atlantic Seaboard service, it is compressed by either Kentucky Hydrocarbons or United Fuel Gas at Beaver Creek location, by one or the other, is that correct?

A. That is correct, to such pressure that it doesn't need to be re-pumped there at Boldman.

occur in present operations, rather than endeavoring to add as a branch, or another stem, to a tree [19a] of contracts, with a base created by sales and deliveries no longer realistic in the present day.

This exchange arrangement, complicated as it may appear, and unrealistic as to its cost analysis as has apparently resulted, was approved by the Commission without any objection from Washington, although public notice was given of the filing of the application for the exchange and the date of hearing.[19] Thus, while a principal contention of Washington stems from the exchange arrangement, self aid on its part might have avoided the alleged discrimination to which Washington most vehemently protests. The public record of this exchange gas proceeding reflects that the gas delivered by United from production near Boldman was intended to be processed by United at Kenova, the silence by Washington in that Seaboard proceeding was not explained in this proceeding and it is concluded that the situation resultant from this exchange arrangement is not such an unreasonable discrimination, against Washington that, if it does exist, (which is not certain) can be changed by virtue of the record made in this proceeding.

Again, as the West Virginia Commission emphasized in its brief in the Supreme Court, the transactions between affiliates require explanations and showings in the public interest, not just a statement that this is what happens by virtue of contracts; the question is: why are the arrangements for sales and deliveries in the manner shown by the contracts, and is it in the public interest to permit such manner of shifting of title of gas to continue.[20]

This record points to a need for a comprehensive review of the contractual relationship among these applicant affiliates, if this application is to receive further consideration, rather than relying upon evidence which reflects the declarations of what the affiliate contracts provide. The form of affiliate contracts is no measure of the necessity for the transactions recited therein. More fundamental evidence may result in a different disposition of this "glaring inequity" or "gross inequity" as described by Washington.[21]

[19a] United also refers to the tree character of some phases of this project by declaring in its reply brief that the intervenors have tried to object to the separate parts of the application as if they were ". . . a bundle of twigs".

[19] Docket No. G–11184, United Fuel Gas Company and Atlantic Seaboard Corporation. In this proceeding, Seaboard proposed to put in some new cylinders in its compressor station in order to better provide for the exchange gas service. Perhaps Washington was lulled into a non-participation in the proceeding by the statement by United:

> . . . no major issue of substance has been raised herein, that the *project presented is relatively minor in nature* and relates solely to the providing of sufficient transmission capacity to the end that existing extraction operations can be continued. [Emphasis added.]

The effect of the "exchange" arrangement is for United to use the gas sold to Seaboard for United's processing plant, and then to resell the gas for distribution in Pittsburgh and not Washington. Perhaps this is deemed "minor" in view of the existing complexity between the affiliates.

[20] United's witness partially expresses the problem that must serve as difficulty for even him, in the following language: "We have got (*sic*) to try to clear the thing up so that the areas of operation and these questions of *who does what* are cleared up and eliminated." [Emphasis added.] If United wants to know *who does what*, the public interest needs also to know *why does who* do what, and *where* is the money from the transaction.

[21] Washington desires that the determination to be made in this proceeding be based upon the existence of discrimination, which Washington recognizes is insufficiently presented in this record by its observation:

> The difficulties of proof of undue discriminations should be kept in mind. We feel sure that the Presiding Examiner appreciates that neither the applicants (possibly meaning the intervenors), nor any other persons in their position, would volunteer in establishing the existence of any undue discrimination by United against any of its customers. [Parenthesis added.]

If, as Washington indicates, the intervenor participants will not establish a case for undue

The final project involved in the joint application concerns the request to transfer 139.5 or, generally considered, 140 miles of pipeline from Seaboard to United. The applicants state that this phase of the application is "inexorably" connected with the proposed merger of Amere into United, which having been found unwarranted, may dispose of this final phase of the application. However, the evidence urged principally by Washington and the Staff in support of a transfer of this segment of Seaboard's KA–20-inch line is that there is some intake of gas along the KA–20-inch line, and purchased in the name of United, along the line, for a distance of some 50 miles, with the greater volumes being purchased within 30 miles from Boldman. United mentioned that with the 20-inch size of this line, and the pressures at which deliveries were made from local production into the Seaboard line, United could not agree with Washington that this KA–20-inch line was, in effect, a gathering line. The Staff placed the matter directly to United's policy witness, whether this portion of the KA–20-inch line was a gathering line, and the definite answer was in the negative.[22] Cincinnati contends that on a basis of a 12-month period, some 65% of the quantity of gas delivered into the KA–20-inch line is delivered at Boldman, and that the balance of gas delivered by United into that line occurs principally within a 30-mile distance eastwardly from Boldman. From all of this evidence, Cincinnati concludes that the principal activity by United is near Boldman, and thus the 140-mile segment of the 420-mile long line is not used principally for gathering gas from United. There are certain delivery points used for gas intake into the KA–20-inch line, and 12 intake points would be eliminated if the transfer of the line were granted. The continued use of the 12 delivery points does not appear to be any concern or problem to United or Seaboard in rendering adequate service, and no improvement in service is asserted to await the transfer of the line. In fact, United has reiterated throughout that there is no problem in rendering the gas service from any of the facilities involved in this application under their present operation. Washington, Baltimore and the Staff refer to the descriptions of the changes that would be made if a transfer occurred and then argue that all the changes mean better service and better arrangements for United. The conclusions do not follow upon those statements of changes; United has stated that service is without problems from these facilities now, and no changes in service will occur. United's witness did say that he thought that from an "administrative and organizational viewpoint", the proposals would result in a better "functional" grouping of the operations of the companies concerned. This conclusion is without merit in the absence of some showing that economies will result, or service will be better, or incidentally, from a public interest point of view, will cost of services be less. None of this is shown in this record, and general statements of "better functional grouping" as advanced in the question by Washington's counsel does not prove an adequate substitute. Terms of this general character have an attraction for argument, but the use

---

discrimination, which must be found in order to sustain the Washington position, and which is claimed to exist, then Washington must be relying upon and urging this regulatory agency to initiate a separate inquiry into all of the contractual relationships among these Columbia affiliates to ascertain if undue discrimination does exist. Washington apparently recognizes that the present record is insufficient to establish its claim.

[22] The Staff question to United's policy witness and his answer were:

Q. Would you say that the western portion of line KA up to Flat Top, up to Flat Top Compressor station takes on many of the characteristics of a gathering line, and that it is operated more closely with the requirements of United Fuel than the requirements of Atlantic Seaboard?

A. No.

The Staff in their brief contend that the primary function of the line KA–20-inch is to gather United's gas.

of them must await some reference to monetary measures in order to consider the public interest. No reliance is thus placed upon this basis asserted by Washington.

In conclusion respecting the KA–20-inch line, an understanding of the Columbia System operations, and particularly United's serving as the main ". . . gas supplier to the whole Columbia system . . .", (as thus described by the West Virginia Commission) indicates that difficult problems of gas service will not arise, nor do any exist presently which require a transfer of a portion of this 420-mile long line from one affiliate in the Columbia System to another. In fact, it may be to the credit of the Columbia System, that no matter which subsidiary holds title to either the pipeline facilities or the gas, the service to the public will not suffer. This is not to say however, that the public interest may not have a real concern with which subsidiary gets the money when gas is delivered and sold, and may not also want to be sure that service is rendered at the lowest reasonable rates consistent with the requirements of the public necessities. Service considerations aside, therefore, the principal impetus for this KA–20-inch line transfer is partially based upon Washington's contention that Boldman and the KA–20-inch line transfer should be considered together, and since Washington relies upon alleged discrimination respecting Boldman, the same assertions should carry over to the KA–20-inch determination. United, however, states that the KA–20-inch line consideration is also linked to the Amere merger proposal and the Boldman proposal. It is concluded that neither contention has established on this record any public interest to require the transfer of the KA–20-inch line. United concludes its brief with the statement that appears somewhat promotional in character: "The natural gas industry is dynamic and ever changing; administrative regulation must likewise be flexible enough to recognize and resolve changing conditions." Apparently the foregoing statement is intended to express the public interest to accept the project set forth in this proceeding. United asserts a negative, but not a positive of what is the public interest by this finale: "The ultimate public interest cannot always be balanced with black and white, dollars and cents." However that may be, the dollars and cents test to measure the public interest will be considered adequate until a better test is shown, and that has not been done in this proceeding. Applying the dollars and cents test in this proceeding reveals that certain jurisdictional customers of United will have added costs of some $800,000 due to any transfer of the portion of the KA–20-inch line, and in addition further costs of over $400,000 would be loaded on due to the requested Amere merger and transfer of the Boldman station. All of these costs would be added [23] without any change or improvement in gas service, if the application were granted.

The facts in this proceeding establish that as to all three projects described in the application, the public convenience and necessity do not require the granting of the application. United has repeated throughout its brief that the 3-project character of the application must be considered as an entirety, and apparently United requests all or none of the application. In any event, it is to be noted that a more complete record would exist for the various contentions which have been asserted if the specific contracts [24] applicable to each of the transactions described in the proceeding had been presented in evidence.

[23] Baltimore in its brief ignores the total dollar cost, and submits a computation showing the cents per Mcf added and concludes that the ". . . proposals of . . . applicants . . . will not have an earth shaking impact . . .", apparently, because its figures look like less.

[24] While official notice could perhaps be taken of all the contracts filed by Columbia System subsidiary companies over the past 20 years of regulation, it is concluded that such procedure should not be followed respecting the fundamental issues here involved, especially with the lack of any evidence of reasonableness and necessity regarding the form of the transactions set forth in the contracts . . . between the affiliates.

In connection with those contracts, the circumstances attendant upon their execution and the gas service activities resultant from the contracts, would aid in a determination of the discrimination issues raised. The present record showing the deliveries of gas, the title transfer, the gas compression, the title reversion, the extraction plant revenues, the gas procured from an unaffiliated source at Beaver Creek for Seaboard, all reflect a complexity of operations that warrant a more complete presentation than was done in this proceeding. In addition, the gas supply contract matters sought to be developed by the West Virginia Commission in its rate proceeding should not continue to be ignored or submerged.

By way of summary, and supplementary to the foregoing which constitute findings and conclusions of law, and also based upon a consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, are the following additional findings and conclusions, which modify, reject, or adopt the proposed findings and conclusions submitted by the participants herein as shown hereby:

1. United and Amere, West Virginia corporations having their principal places of business in Charleston, West Virginia, are "natural gas companies" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

2. Seaboard, a Delaware corporation having its principal place of business in Charleston, West Virginia, is a "natural gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

3. The proposed abandonment by Amere upon the merger into and with United should not be permitted by, and is not required by the public convenience and necessity, and permission and approval therefor should be denied as hereinafter ordered.

4. The facilities proposed to be abandoned by Seaboard, as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

5. The proposed abandonment and sale by Seaboard of the aforesaid facilities should not be permitted by and is not required by the public convenience and necessity and permission and approval therefor should be denied as hereinafter ordered.

6. The facilities proposed to be acquired and operated by United and the facilities proposed to be constructed and operated by United, as hereinbefore described and as more fully described in the application herein, are or will be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and the acquisition, construction and operation thereof by United are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

7. The acquisition, construction and operation of the facilities, including the services thereby provided, as proposed by United are not required by the public convenience and necessity and a certificate therefor should not be issued and an order should be entered denying the application for such a certificate.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission, on appeal or review by the Commission on its own motion, as provided by its Rules of Practice, that:

(A) The application by Amere for permission and approval of the abandonment by Amere upon the merger into and with United of the facilities hereinbefore described, as more fully described in the application and exhibits in this proceeding, is hereby denied.

(B) The application by Seaboard for permission and approval of the abandonment by Seaboard upon the sale to United of the facilities hereinbefore described, as more fully described in the application and exhibits in this proceeding, is hereby denied.

(C) The application by United for permission and approval of the acquisition, construction and operation of the facilities, including the services thereby provided, as proposed by United, as more fully described in the application and exhibits in this proceeding, is hereby denied.

SAMUEL W. JENSCH,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

PETROLEUM OFFSHORE LEASEHOLDS, INC. (OPERATOR), ET AL., DOCKET NO. G–19010; AREA RATE PROCEEDING, DOCKET NO. AR61–2, ET. AL.

ORDER SEVERING PROCEEDING AND FIXING DATE OF HEARING

(Issued January 17, 1963)

On July 20, 1959, Petroleum Offshore Leaseholds, Inc. (Operator) *et al.*, (Offshore) filed in Docket No. G–19010 an application for certificate of public convenience and necessity pursuant to Section 7 of the Natural Gas Act as successor in interest to Phillips Petroleum Company (Phillips) to sell gas to Transcontinental Gas Pipe Line Company (Transco).[1] Said gas is produced from blocks 172 and 184, Eugene Island Area, approximately 42 miles off the southern coast of Louisiana. On April 28, 1960, Offshore was granted temporary authority to sell the gas to Transco as proposed, subject to the condition that Offshore refund to Transco any amounts collected in excess of the amount resulting from the rate finally determined to be proper in Docket No. G–19010. Offshore filed its acceptance of temporary authority and the sale commenced thereunder. On June 12, 1961, this matter was consolidated with the Area Rate Proceeding, AR61–2, *et al.*

On October 8, 1962, Offshore filed a petition for the issuance of an order granting a permanent certificate of public convenience and necessity in accordance with its application as modified by a settlement agreement.

Under the terms of the settlement agreement, commencing July 1, 1962, the rate charged for natural gas under Offshore's Rate Schedule No. 1 shall be 19.0¢ per Mcf subject to possible change, as therein provided. Offshore agrees that no rate change shall be filed prior to July 1, 1967. As to offshore production not subject to the taxing authority of the State of Louisiana, Offshore shall be entitled, during the moratorium period, to file a rate increase in an amount equal to half of the amount of any tax which may be imposed by the United States Government. If the offshore production is held to be subject to the taxing authority of the State of Louisiana, the price for which Offshore may file during

[1] Phillips had theretofore been granted a certificate of public convenience and necessity to make these sales in Docket No. G–14244.

the moratorium shall be 20.625¢ per Mcf inclusive of tax reimbursement, effective as of the date of the initial payment of such tax but not earlier than the date of filing of the rate increase. The prices fixed in the settlement agreement are subject to change and revision upward or downward as the result of any final determination prescribing a rate or rates applicable to the gas subject to the agreement in Docket No. AR61–2 or other applicable area rate proceedings, from the date of such determination.

Offshore shall refund to Transco the difference between the amount per Mcf actually collected for gas delivered under its Rate Schedule No. 1 and the settlement price of 19.0¢ multiplied by the volumes delivered in June 1962, and in each successive prior month until a dollar amount has been compiled which is equal to ⅔ of the difference between the amount paid to Offshore by Transco for gas delivered from the date of initial delivery and the amount that would have been due had a rate of 19.0¢ prevailed during the entire period. Interest shall be paid at a rate of 7% per annum. No interest shall accrue after July 1, 1962.

Transco shall have the right to make up gas paid for but not taken over a four year period in lieu of the two year period provided for in the contract for sale comprising Offshore's Rate Schedule No. 1.

The settlement agreement further provided that none of the parties agreeing thereto would be prejudiced in any position taken in any other proceeding.

This matter was previously consolidated with the Area Rate Proceeding, Docket No. AR61–2. In view of the proposed settlement this matter should be severed from said proceeding.

The Commission finds:

(1) It is in the public interest that the above-listed proceeding be severed from the Area Rate Proceeding, Docket No. AR61–2, *et al.*

(2) This matter is one that should be disposed of as promptly as possible under the applicable rules and regulations.

The Commission orders:

(A) The above-listed proceeding is hereby severed from the Area Rate Proceeding, Docket No. AR61–2, *et al.*

(B) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by Sections 7 and 15 of the Natural Gas Act, and the Commission's Rules of Practice and Procedure, a hearing will be held on February 18, 1963, at 9:30 a.m. (EST), in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., concerning the matters involved in and the issues presented by such application: *Provided, however*, that the Commission may, after a non-contested hearing, dispose of the proceedings pursuant to the provisions of Section 1.30 (c) (1) or (c) (2) of the Commission's Rules of Practice and Procedure in accordance with the terms of the settlement proposal filed on October 8, 1962. Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Offshore to appear or be represented at the hearing.

(C) Protests or petitions to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Rules of Practice and Procedure (18 CFR 1.8 or 1.10) on or before February 7, 1963. Failure of any party to appear at and participate in the hearing shall be construed as waiver of and concurrence in omission herein of the intermediate decision procedure in cases where a request therefor is made.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SHELL OIL COMPANY, DOCKET NO. CI63-267

ORDER GRANTING REHEARING AND AMENDING TEMPORARY CERTIFICATE

(Issued January 17, 1963)

Shell Oil Company (Shell) on December 21, 1962, filed an application for rehearing with respect to the initial price conditioning provision contained in Paragraph (1) of the Commission's letter-order issued December 5, 1962, granting Shell a temporary certificate authorizing the sale of natural gas to Colorado Interstate Natural Gas Company (Colorado Interstate).

Shell, on August 27, 1962, filed an application for a certificate of public convenience and necessity authorizing it to sell natural gas produced from acreage in Laverne Field, Harper County, Oklahoma. Incorporated in the application was a request for a temporary certificate pursuant to Section 157.28 of the Commission's Regulations under the Natural Gas Act. Shell alleged in its request that its acreage was being drained by three adjoining producing wells.

The acreage from which Shell proposed to sell natural gas had been acquired by it from Marathon Oil Company (Marathon).[1] Marathon had assigned the acreage to Shell under a "Farmout Agreement" entered into on July 28, 1960.[2] The acreage was covered by a contract between Marathon and Colorado Interstate dated April 9, 1957.[3] Marathon, however, had never drilled on the particular acreage.

Subsequent to the assignment, Shell drilled and completed a well on the acreage, and since the assignment was subject to the Marathon-Colorado Interstate contract dated April 9, 1957, Shell ratified the contract on May 18, 1962, and then filed its certificate application. Shell filed the Marathon-Colorado Interstate contract and the ratification agreement as its rate schedule to accompany the certificate application.

Ohio, on May 7, 1962, had filed a petition requesting that the Commission issue an order approving a settlement proposal concerning the rates under 49 of its filed rate schedules and the then pending rate proceedings relating thereto. The settlement proposal included Ohio's FPC Rate Schedule No. 30 and rate proceedings relating thereto.[4] The settlement proposal which included, among other things, a moratorium until January 1, 1964, on the filing of increases in rates was approved by the Commission by order issued June 28, 1962, in *The Ohio Oil Company, et al.*, Docket No. RI60-92, *et al.*, 27 FPC 1373.

The Commission in granting the temporary certificate to Shell by letter-order issued December 5, 1962, attached to the issuance of the certificate a condition relating to the initial price for the natural gas sold thereunder by providing:

[1] Formerly The Ohio Oil Company (Ohio).

[2] The date of the assignment is, for the first time, indicated in Shell's application for rehearing.

[3] Marathon had received a certificate covering the assigned and other acreage and the contract between Marathon and Colorado Interstate had been accepted for filing as Marathon's FPC Gas Rate Schedule No. 30.

[4] It is to be noted that Ohio's settlement proposal was filed on May 7, 1962. Shell ratified the Marathon (Ohio)-Colorado Interstate contract on May 18, 1962. The acreage, however, had been assigned by Ohio to Shell on July 28, 1960, almost 2 years before the filing of the settlement proposal.

That the total initial price therefor shall not exceed 15.0 cents per Mcf at 14.65 psia plus upward Btu adjustment, and pursuant to the rate settlement proposal filed by Marathon (Ohio Oil Co.) and approved by the Commission with respect to Marathon's FPC Gas Rate Schedule No. 30, no increased rate shall be filed under Shell's FPC Gas Rate Schedule No. 278 prior to January 1, 1964.

In its application for rehearing Shell states as follows:

> From the quoted language it is apparent that the letter order fosters on Shell the end result of a general rate settlement negotiated by Marathon. However, Shell had acquired Marathon's interest in the acreage by assignment dated July 28, 1960, long prior to the Marathon rate settlement. * * * Admittedly, no quarrel can be raised with the Commission's initial action herein since the Commission had not been advised of the assignment. (Application for Rehearing, page 2.)

At the time action was taken on Shell's request for a temporary certificate it appeared from the material before the Commission that Shell had ratified the Marathon-Colorado Interstate contract, Marathon (Ohio Oil Co.) FPC Rate Schedule No. 30, subsequent to the submission of the rate settlement offer relating to the same rate schedule. There was no information submitted with respect to the date the assignment of part of the acreage covered by Marathon's FPC Rate Schedule No. 30 notwithstanding the fact that the assignment had occurred almost 2 years prior to the date of the submission of the rate settlement proposal. Shell correctly states in the application for rehearing that "the Commission had not been advised of the assignment."

In view of the facts brought to the Commission's attention for the first time by Shell's application for rehearing, rehearing should be granted and the temporary certificate granted by letter order issued December 5, 1962, should be modified as hereinafter ordered.

The Commission orders:

(A) Shell Oil Company's application for rehearing filed December 21, 1962, be and hereby is granted.

(B) The condition of Paragraph (1) of the letter order issued December 5, 1962, be modified to read as follows:

> That the initial price therefor shall be 16 cents per Mcf at 14.65 psia plus upward Btu adjustment as provided in Shell's related FPC Gas Rates Schedule No. 278, subject to Shell refunding to Colorado Interstate any amounts collected from the date of delivery, plus interest at 7 percent per annum, in excess of 17 cents per Mcf which may be determined to be in excess of the price required by the public convenience and necessity in Docket No. CI63-267.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, UNITED NATURAL GAS COMPANY, NORTH PENN GAS COMPANY, DOCKET NO. CP61-284; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP61-292; TEXAS EASTERN TRANSMISSION CORPORATION, CP62-214; NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NO. CP62-250; NEW YORK STATE NATURAL GAS CORPORATION, TENNESSEE GAS TRANSMISSION COMPANY, UNITED NATURAL

GAS COMPANY, DOCKET NO. CP62-275; THE SYLVANIA CORPORATION, DOCKET NO. CP62-276

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 18, 1963)

Applications pursuant to Section 7 of the Natural Gas Act have been filed by the above Applicants in the respective dockets indicated seeking certificates of public convenience and necessity and, in one instance, permission and approval to abandon certain facilities, all as hereinafter set forth and as more fully set forth in the respective applications and supplements thereto which are on file with the Commission.

In Docket No. CP61-284, by applications filed May 1, 1961, and July 21, 1961, as supplemented on May 17, May 29, July 13, and July 20, 1961, and July 27, 1962, Transcontinental Gas Pipe Line Corporation (Transco), United Natural Gas Company (United) and North Penn Gas Company (North Penn), jointly, seek certificate authorization to develop and operate, as the Wharton Storage Field, reservoirs within the Oriskany Horizon of Wharton Field, Potter and Cameron Counties, Pennsylvania, for the storage of natural gas to help meet the increasing peak day requirements of Applicants' existing customers.

This project is proposed to be developed in two stages. Under the initial development (Stage I) which is the subject of this application as amended on July 27, 1962, Applicants propose to construct and operate facilities at an estimated total cost of $16,591,100, all of which (except for an expenditure of some $65,000 by United for field facilities) is to be borne by Transco. The financing of this amount is included in Transco's over-all financing program covering all of its authorized (but not yet constructed) facilities as well as all of its pending applications including that in Docket No. CP61-292 which is covered hereinafter.

The proposed project herein is based upon two agreements, each dated March 17, 1961, as revised, one between Transco and United and the other between United and North Penn, delineating the contributions by and the benefits allocated to each participant according to their specific agreements.

Under a proposed initial development program to be completed by October 1963 to allow a year for injection of gas before rendering service during the winter of 1964-65, it is estimated that the field will have a capacity to hold efficiently in storage 10,996,667 Mcf of active gas and that the field will have the ability to deliver from the Wharton Compressor Station at a rate of not less than 115,347 Mcf per day until 85% of the active gas has been withdrawn. Upon full development of the field, it is estimated that the storage pool will have a capacity to hold efficiently in storage 24,000,000 Mcf of active gas with a deliverability from the Wharton Compressor Station at a rate of not less than 300,000 Mcf per day until 85% of the active gas has been withdrawn.

Under both the initial and the full development programs, Transco's assigned storage capacity is a quantity equal to 75% of the rated storage capacity and United's assigned storage capacity is a quantity equal to 25% of the rated storage capacity. United's assigned delivery capacity is a quantity equal to 1/120th of its assigned storage capacity and Transco's assigned delivery capacity is a quantity equal to the balance of the rated delivery capacity. United's assigned storage capacity and assigned delivery capacity include North Penn's respective assigned capacities.

North Penn owns certain wells, leases, oil and gas rights and native gas in the Wharton Field which are requisite to the development and operation of the Wharton Storage Pool. In consideration of the dedication of North Penn's

properties to the project, the other parties have agreed that North Penn shall retain for its own use not more than 456,945 Mcf of the top storage capacity under the initial development program and 1,000,000 Mcf at full development, and North Penn is assured the right to withdraw gas at a rate not to exceed 4,569 Mcf in any one day under the initial program, and not to exceed 10,000 Mcf in any one day at full development.

Applicants have agreed upon a pro-ration of opertaing expenses of 80% to Transco, 16% to United and 4% to North Penn.

In Docket No. CP61-292, Transco, by application filed May 17, 1961, as supplemented on July 13, 1961, and as amended on July 27, 1962, seeks certificate authorization for the construction and operation of approximately 15.57 miles of 24-inch loop line in Pennsylvania and 10,000 horsepower of compression in a new intermediate station, to be utilized, together with the Wharton Storage Pool proposed in Docket No. CP61-284, for the rendition of increased natural gas storage service to ten existing wholesale customers. The estimated cost of these proposed new facilities is $6,130,000 which will be financed as hereinbefore stated.

The additional contract demands contemplated aggregate 53,500 Mcf for the winter 1963-64; 121,000 Mcf for the winter 1964-65; and 146,000 Mcf for the winter 1965-66. The additional storage service of 53,500 Mcf beginning in the winter 1963-64 will be purchased by Transco from New York State Natural Gas Corporation under Docket No. CP62-250. The remaining 92,500 Mcf per day required thereafter will be supplied entirely from the Wharton Pool. Rates for the increased storage service to the existing customers will be rendered under Transco's Rate Schedule GSS.

In Docket No. CP62-214, Texas Eastern Transmission Corporation (Texas Eastern), by application filed on March 15, 1962, as supplemented on June 4 and August 2 and 6, 1962, seeks certificate authorization to construct and operate, as part of its existing natural gas system, approximately 8.84 miles of 30-inch pipeline loops on its existing 24-inch pipeline between its Perulack Station in Juniata County, Pennsylvania, and Station 26, Hunterdon County, New Jersey, to increase by some 76,500 Mcf of natural gas per day its capacity to meet the additional long term winter requirements of seven of its existing customers in Pennsylvania and New Jersey, at an estimated total cost of $1,437,000. The application includes a request for authorization to render this additional service. The additional 76,500 Mcf per day is proposed to be stored for Texas Eastern by New York State Natural Gas Corporation as described below.

Temporary authorization was issued to Texas Eastern in Docket No. CP62-214 on August 24, 1962.

In Docket No. CP62-250, New York State Natural Gas Corporation (New York Natural), by application filed April 27, 1962, as amended on August 2, 1962, seeks certificate authorization to render a new natural gas storage service for Texas Eastern, to increase its present natural gas storage service for Transco and to construct and operate a 3,300 horsepower transmission compression station with appurtenant facilities including approximately 2900' of 14-inch pipeline, near the Leidy Storage Pool Compression Station in Clinton County, Pennsylvania, at a total estimated cost of $1,206,579.

Temporary authorization was issued to New York Natural in Docket No. CP62-250 on August 24, 1962.

The proposed new service for Texas Eastern to commence during the 1962 injection period consists of a maximum of 1,259,800 Mcf to be injected in 1962 and delivered to Texas Eastern during the 1962-63 withdrawal period at not to exceed 25,196 Mcf per day; thereafter, a maximum of 3,825,000 Mcf annually

and not to exceed 76,500 Mcf peak day. The proposed increased service for Transco is for an additional 3,075,000 Mcf annually (a total authorization of 10,575,000 Mcf) with deliveries in withdrawal periods of an additional 53,500 Mcf peak day (a total authorization of 203,500 Mcf) commencing in 1963–64. These services will be rendered under New York Natural's filed GSS–1 rate schedule.

In Docket No. CP62–275, New York Natural, Tennessee Gas Transmission Company (Tennessee), and United Natural, by joint application filed on May 25, 1962, seek certificate authorization for the construction, operation and acquisition of natural gas facilities incident to the initial development of the Ellisburg Storage Pool in Potter County, Pennsylvania, for the use of the three joint Applicants.

The application states that New York Natural and Tennessee each own undivided one-half interests in 11,281 acres of land in the Ellisburg Pool and that United owns storage interests in 8,498 acres thereof.

The total cost of construction for the initial plan of development of the Ellisburg Storage Pool under this application, including compressors, wells, well lines and other appurtenant facilities, is estimated at $9,182,900, which will be borne as follows: $3,977,505 each by New York Natural and Tennessee, and $1,227,890 by United. In addition, New York Natural asks authority to construct and operate approximately 5.1 miles of 20-inch connecting pipeline at an estimated cost of $377,235; Tennessee asks authority to construct and operate approximately 7.8 miles of 26-inch connecting pipeline at an estimated cost of $1,074,000; and United asks authority to construct and operate approximately 700 feet and 800 feet of 12-inch connecting pipelines at an estimated cost of $76,000 (this $76,000 is included in the $1,227,890 cost to United mentioned above) and also to acquire from The Sylvania Corporation approximately 4.2 miles of 12-inch connecting pipeline (which Sylvania asks permission and approval to abandon by sale to United in Docket No. CP62–276) at a cost of $3,037. United also proposes to operate certain existing pipelines which were originally utilized as production lines in the Ellisburg area.

The quantities of storage gas and deliverabilities proposed under the initial development of Ellisburg Storage Pool, at a pressure base of 15.025 psia, are:

Base storage gas (Mcf):	
New York Natural	12,714,000
Tennessee	12,714,000
United	1,600,000
	27,028,000
Top storage gas (Mcf):	
New York Natural	9,600,000
Tennessee	9,600,000
United	2,400,000
	21,600,000
Maximum daily deliverability available (Mcf):	
New York Natural	78,000
Tennessee	78,000
United	14,000
	170,000

The three Applicants propose to share their joint capital and operating costs at Ellisburg in proportion to the storage capacity to be made available to each.

Tennessee also seeks authority to occupy additional storage gas capacity in the Ellisburg Pool for the purpose of accommodating and holding quantities of migrated gas which it will have in the pool due to migration from the adjacent Hebron Storage Pool, up to its full share of the total storage gas capacity ultimately to be developed (being 39% of such total storage gas capacity). The parties have agreed that the migrated gas balance in the Ellisburg Pool is the property of Tennessee and that of September 26, 1961, the quantity was approximately 27,790,000 Mcf.

Tennessee proposes to fulfill its base gas requirement for the Ellisburg Pool by utilizing 12,714,000 Mcf of the migrated gas therein, and New York Natural proposes to fulfill its base gas requirement by purchasing 12,714,000 Mcf of Tennessee's migrated gas therein at the commodity rate (now 29.1¢ per Mcf) applicable to sales by Tennessee under its Rate Schedule CD–4. United's base gas requirement will be provided by injecting 1,600,000 Mcf purchased from pipeline suppliers at an estimated cost of $644,800.

Tennessee also requests authorization to establish additional delivery points at interconnections of its facilities with those of New York Natural and United, respectively, at the Ellisburg Pool for the purpose of delivering at Ellisburg gas which is presently being delivered at other points.

In Docket No. CP62–276, The Sylvania Corporation (Sylvania), by application filed on May 25, 1962, seeks permission and approval to abandon in place by sale to United Natural Gas Company approximately 4.2 miles of 12-inch pipeline which segment of connecting line United asks authority to acquire in Docket No. CP62–275, as hereinbefore referred to. Sylvania also in this application seeks certificate authorization to change its present point of delivery to United in Hebron Township, Potter County, Pennsylvania, to the point in Allegany Township where the subject 4.2 mile section of pipeline joins that portion of Line Z–20 which is to be retained by Applicant. The cost of relocating the metering station involved is estimated to be $2,850.

On July 16, 1962, North Penn Gas Company filed a petition to intervene in Docket No. CP62–275, which petition was denied by the Commission by order issued on December 4, 1962.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 8, 1963, respecting the matters involved in and the issues presented by the applications in this consolidated proceeding. A number of petitions to intervene and notices of intervention have been filed (other than the petition of North Penn in Docket No. CP62–275) in one or more of the subject dockets by various interested companies and State Commissions, some of which have been amended or supplemented. In all cases, the burden of such filings, as amended, has been that the petitioners did not request formal hearing in these proceedings and did not object to the hearing and disposition of the subject applications under the shortened procedure provided for by the Commission's Rules, but that each petitioner desired to preserve its rights to appear and participate fully in the event that these matters should be set for formal hearing. Inasmuch as the abridged hearing procedure is being used herein, no further action on the various intervention petitions and notices appears necessary.

No protests to the granting of the applications having been received, and no other appearances having been entered at the hearing, staff counsel moved orally that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(2) Applicant, United Natural Gas Company, a Pennsylvania corporation having its principal place of business in Oil City, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1943, in Docket No. G–328 (3 FPC 959).

(3) Applicant, North Penn Gas Company, a Pennsylvania corporation having its principal place of business in Port Allegany, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 2, 1943, in Docket No. G–335 (3 FPC 936).

(4) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued October 11, 1947, in Docket No. G–880 (6 FPC 148).

(5) Applicant, New York State Natural Gas Corporation, a New York corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 27, 1942, in Docket No. G–312 (3 FPC 844).

(6) Applicant, Tennessee Gas Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G–910 (6 FPC 777).

(7) Applicant, The Sylvania Corporation, a Pennsylvania corporation having its principal place of business in Oil City, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 17, 1943, in Docket No. G–327 (3 FPC 1066).

(8) The facilities to be constructed and operated by Transco, United and North Penn in Docket No. CP61–284; by Transco in Docket No. CP61–292; by Texas Eastern in Docket No. CP62–214; by New York Natural in Docket No. CP62–250; to be constructed, operated and acquired by New York Natural in Docket No. CP62–275; and to be relocated by Sylvania in Docket No. CP62–276, all as hereinbefore described and as more fully described in the respective applications herein, as supplemented and amended, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of the existing pipeline systems and operations of the respective Applicants, and the construction, operation, acquisition and relocation thereof, respectively, by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(9) The construction, operation, acquisition and relocation of the proposed facilities, respectively, by Applicants are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(10) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the requirements, rules and regulations of the Commission thereunder.

(11) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations (except that paragraphs (a) and (c)(1) do not apply to Docket Nos. CP62-214 and CP62-250, and paragraphs (d)(2) and (d)(3) apply only to United in Docket No. CP62-275). The respective Applicants should be required to complete and place in actual operation the facilities or to complete the acts hereinafter authorized within two years from the date on which this order issues.

(12) Applicants United and North Penn in Docket No. CP61-284 should be required to submit, upon completion of Stage I of the Wharton Project, accounting entries reflecting, by primary accounts, the transfer from production to storage of the recorded costs and accumulated provisions for depreciation and amortization with respect to all facilities of the storage project continued in service.

(13) The facilities proposed to be abondoned by Sylvania in Docket No. CP62-276, as hereinbefore described and as more fully described in the application therein, are subject to the jurisdiction of the Commission and abandonment of such facilities by sale to United is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(14) Such abandonment by Sylvania, as hereinbefore described, is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(15) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing the construction and operation of facilities by Transco, United and North Penn in Docket No. CP61-284; by Transco in Docket No. CP61-292; by Texas Eastern in Docket No. CP62-214; by New York Natural in Docket No. CP62-250; to be constructed, operated and acquired by New York Natural in Docket No. CP62-275; and to be relocated by Sylvania in Docket No. CP62-276; all as hereinbefore described and as more fully described in the respective applications, as supplemented and amended, for the transportation and sale of natural gas in interstate commerce as therein set forth, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned by Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations (except that paragraphs (a) and (c)(1) do not apply to Docket Nos. CP62-214 and CP62-250, and paragraphs (d)(2) and (d)(3) apply only to United in Docket No. CP62-275). The respective Applicants shall complete and place in actual operation the facilities or complete the acts hereinabove authorized within two years from the date on which this order issues.

(C) Applicants United and North Penn in Docket No. CP61-284 shall submit, upon completion of Stage I of the Wharton Storage Project, accounting entries

reflecting, by primary accounts, the transfer from production to storage of the recorded costs and accumulated provisions for depreciation and amortization with respect to all facilities of the storage project continued in service.

(D) Permission for and approval of the abandonment of facilities by Sylvania by sale to United, as hereinbefore described and as more fully described in the application in Docket No. CP62-276, be and same are hereby granted.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

PORTLAND GENERAL ELECTRIC COMPANY, CROWN ZELLERBACH CORPORATION AND PUBLISHERS' PAPER COMPANY, PROJECT NO. 2233

ORDER DENYING APPLICATIONS FOR REHEARING

(Issued January 21, 1963)

On December 31, 1962, Portland General Electric Company and Publishers' Paper Company filed a joint application and Crown Zellerbach Corporation filed a separate application for rehearing of our Opinion and Order No. 370, issued December 3, 1962, 28 FPC 924, in the above-entitled proceedings. In our opinion and order we denied the request of the applicants to strike Articles 9 and 10 from the license. These articles provide that the licensee may be required to convey land to the United States for navigation facilities and supply power for the operation of such facilities.

The applicants contend that if property were required to be transferred to the United States under Articles 9 and 10 in order to permit enlargement of the navigation facilities, the power generating and paper-making facilities at the site would necessarily be jeopardized or rendered useless to their great cost and detriment. We do not think that applicants can assume on the basis of the record and the physical conditions at Williamette Falls that possible enlargement of the navigation facilities will necessarily require the conveyance of land that will damage these industrial properties. There is other project land that might be used for navigation facilities and could be affected by Articles 9 and 10. There is nothing to show that the only possible way to enlarge the navigation facilities would be to enlarge the present canal by increasing its width on the river side where the power and paper plants are situated.

Furthermore, as noted in our opinion the substance of Articles 9 and 10 are set forth in Section 11 of the Federal Power Act. They are of general import and would provide for the conveyance of property from the licensee to the United States when and where needed for the improvement of navigation. Such articles, which are used in many licenses, would have an effect on the property of other licensees similar to that on the property of the applicants here. The obligations and risks of a license, common to all licensees, must be undertaken by those permitted to make use of the navigable waters of the United States.

The Commission finds:

The applications for rehearing filed on December 31, 1962, by Portland and Publishers' jointly, and by Crown Zellerbach present no new facts or principles of law which were not considered by the Commission when it issued Opinion No. 370 on December 3, 1962, or which having now been considered warrant any change or modification of said order.

The Commission orders:

The applications for rehearing referred to above are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

TELLURIDE POWER COMPANY AND UTAH POWER & LIGHT COMPANY, PROJECT NOS. 814 AND 994

ORDER APPROVING TRANSFER OF LICENSE

(Issued January 21, 1963)

Joint application was filed on June 1, 1962 by Telluride Power Company, licensee for major Project No. 814 and transmission line Project No. 944, and Utah Power & Light Company, of Salt Lake City, Utah, for Commission approval of transfer of the licenses for the projects from the former to the latter.

According to the application, the approval herein sought is part of a merger transaction between the transferor and the proposed transferee, application for authority to consummate which has been filed with the Commission and designated as Docket No. E-7034. Joint applicants herein request that Commission approval of the transfer of the licenses involved be made effective as of the date of conveyance of the project properties from Telluride Power Company to Utah Power & Light Company.

The license for transmission line Project No. 994 waives Section 8 of the Federal Power Act, and consequently no Commission approval of the transfer of license is required.

The Commission finds:

(1) The proposed transferee is a private corporation organized under the laws of the State of Maine and authorized to do business within the States of Utah, Idaho, and Wyoming, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary for the operation of the project.

(2) Approval of the transfer of the license for Project No. 814 as hereinafter provided will not be inconsistent with the public interest.

The Commission orders:

(A) The transfer of the license for major Project No. 814 from Telluride Power Company to Utah Power & Light Company is hereby approved, effective as of the date of conveyance of the project properties from Telluride Power Company to Utah Power & Light Company, subject to the provisions of Section 9.3 of the Commission's Regulations under the Federal Power Act, and provided that in effecting the transfer neither the expenditures on account of the project nor the net investment therein shall be increased on account of the transfer.

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of the license for Project No. 814. In acknowledgment of the acceptance of the license, this instrument shall be signed for the new licensee and returned to the Commission within 60 days from the date of issuance of this order accompanied by a certified copy of the deed of conveyance or other instrument evidencing transfer of the property under license, together with evidence of the recording thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

UTAH POWER & LIGHT COMPANY, DOCKET NO. E-7034

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued January 21, 1963)

Utah Power & Light Company (Utah Power), incorporated under the laws of the State of Maine and doing business in the States of Utah, Wyoming and Idaho, with its principal business office at Salt Lake City, Utah, filed an application on April 4, 1962, as supplemented on April 5, June 27, and December 31, 1962, for authorization, pursuant to Section 203 of the Federal Power Act, to acquire all of the assets and facilities of Telluride Power Company (Telluride), a corporation organized under the laws of the State of Delaware and doing business in Utah, with its principal business office at Salt Lake City and its main operating office at Richfield, Utah. Telluride, a wholly-owned subsidiary of Utah Power, supplies electric service in southwestern Utah to the Counties of Millard, Sanpete, Sevier, Beaver, Juab, Piute and Garfield, and to 30 incorporated communities located therein.

Utah Power, in May 1958, acquired ownership of all outstanding Capital Stock of Telluride. This acquisition of Capital Stock included 750,525 shares of 6% Cumulative Second Preferred Stock, acquired for cash at par value of $1 per share, and included 582,337 shares of Common Stock, par value $1 per share, acquired by the exchange of one share of Utah Power's Common Stock for each eleven shares of Telluride's Common Stock. Utah Power's acquisition of Telluride's entire Capital Stock was authorized by the Securities and Exchange Commission under the Public Utility Holding Company Act of 1935. Utah Power, in 1960, purchased 300,000 additional shares of Telluride's Common Stock for cash in the amount of $675,000.

Utah Power and Telluride, on December 20, 1961, adopted a plan of liquidation of Telluride, which provides, in substance, as follows: Utah Power will make a capital contribution of about $2,085,000 to Telluride to enable Telluride to retire all of its outstanding First Mortgage Bonds in the total principal amount of $2,015,000; Utah Power will forgive Telluride's outstanding notes in the principal amount of $1,900,000, payable to Utah Power; and Telluride will be merged into Utah Power and Telluride will be dissolved. In the merger, Utah Power will record all of Telluride's assets and other debits and will record all of its remaining liabilities and other credits, including the increase in Telluride's Earned Surplus from the 1958 acquisition of Telluride's Common Stock to the date of the consummation of the merger. This increase in Earned Surplus represents retained earnings. Utah Power, as of December 31, 1961, would have credited its Earned Surplus account with $577,613 for Telluride's retained earnings.

In Utah Power's 1958 acquisition of Telluride's Common Stock, the market value of Utah Power's Common Stock exchanged for Telluride's Common Stock exceeded the net book value of Telluride's property and other assets by $454,419. In the merger of Telluride into Utah Power, this excess of $454,419 will be classified as an acquisition adjustment and will be recorded on Utah Power's books as a debit to Account 114, Electric Plant Acquisition Adjustments.

In the merger, Utah Power will also record in Account 114, Electric Plant Acquisition Adjustments, a credit balance of $20,572, now on the books of Telluride. The net amount of acquisition adjustments on Utah Power's books, therefore, will be $433,847. This amount being the difference between $454,419 re-

ferred to above and Telluride's existing credit balance of $20,572. Utah Power has agreed to amortize the net amount of $433,847 over a period of five years by charges to Account 425, Miscellaneous Amortization.

After consummation of the proposed transaction, according to the application, Utah Power will operate the facilities acquired from Telluride as an integral part of its electrical system, centralizing and integrating functions such as engineering, construction, system operations, customer accounting and billing, and other functions under more modern methods—all of which will provide for better services, more economical operations and will be in the public interest. In addition, Utah Power will apply its rates to the newly acquired facilities. Although an increase in such rates has recently been authorized by the Utah Commission, the increased rates, as applied to the newly acquired facilities, will provide lower rates to the present Telluride customers.

Written notice of the application has been given to the Public Service Commission of Utah, the Idaho Public Utilities Commission and the Public Service Commission of Wyoming, and to the Governor of each of those States. Notice of the application was also published in the Federal Register on April 18, 1962 (27 F.R. 3706), stating that any person desiring to be heard or to make any protest with reference to said application should, on or before the 7th day of May, 1962, file with the Federal Power Commission, Washington 25, D.C., petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Public Service Commission of Utah, by order issued December 27, 1962, approved the transactions proposed by Utah Power herein.

Utah Power is a holding company registered under the Public Utility Holding Company Act of 1935. Inasmuch as the acquisition of facilities proposed herein is subject to the approval of a State commission such acquisition is exempted from the provisions of the aforesaid Act by virtue of Section 9(b)1 thereof. Telluride presently owns and operates license projects Nos. 814, 994. In a separate order issued concurrently herewith, the transfer of the licenses for certain facilities from Telluride to Utah Power is approved.

The Commission finds:

(1) Utah Power, a corporation organized and existing under the laws of the State of Maine, owns and operates facilities, among others, for the transmission and sale at wholesale of electric energy which is transmitted between the States of Idaho and Montana, between the States of Idaho and Utah, from Idaho to Wyoming, and from Wyoming to Utah for consumption outside of the State in which it is generated and for the transmission of electric energy from Utah to Wyoming for consumption outside of the State in which it is generated—all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy, facilities used in local distribution or only for the transmission of electric energy consumed wholly by the transmitter, and Utah Power is, therefore, a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) By the proposed transaction, as described above, Utah Power will acquire and merge or consolidate with its facilities, subject to the jurisdiction of the Commission all of the facilities of Telluride, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of Telluride's electric facilities by Utah Power, as described above, upon the terms and conditions specified in the application and subject to the provisions of this order, will be consistent with the public interest, as expressed in Section 203 of the Act, for the reasons set forth in the recital above.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of the facilities of Telluride by Utah Power, as described above, is hereby authorized and approved upon the terms and conditions set forth in the application, subject to the provisions of this order.

(B) Utah Power shall record the transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees. Utah Power shall dispose of the Electric Plant Acquisition Adjustment resulting from the proposed transaction by charges to Account 425, Miscellaneous Amortization over a period of five years.

(C) This authorization shall expire unless the transaction herein authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP63-14

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 22, 1963)

On July 16, 1962, as supplemented on July 30, 1962, and September 17, 1962, Florida Gas Transmission Company (Applicant) filed in Docket No. CP63-14 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas to Geneva County Gas District (District) for resale and distribution by the latter in the communities of Geneva, Hartford, Samson and Slocomb, in Geneva County, Alabama, all as more fully set forth in the application, as supplemented.

Applicant proposes to construct and operate the necessary related gas metering and regulating facilities on its 24-inch transmission line at a point near the county line between Homes and Walton Counties, Florida. The proposed facilities are estimated to cost $15,300, which cost will be financed from cash on hand.

The estimated third year peak day and annual natural gas requirements of District are 4,527 Mcf and 262,629 Mcf, respectively.

District proposes to construct and operate a gas transmission line and the necessary distribution facilities for the four communities to be served. The estimated cost of these facilities is $1,900,000.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 8, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas

company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1956, in Docket Nos. G–9262 and G–9960 (16 FPC 118).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Florida Gas Transmission Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sales of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

CAROLINA POWER & LIGHT COMPANY, DOCKET NO. E–7078

ORDER TO SHOW CAUSE AND PROVIDING FOR HEARING

(Issued January 23, 1963)

Carolina Power & Light Company (Carolina Power), Raleigh, North Carolina, incorporated under the laws of the State of North Carolina, conducts

utility operations both at wholesale for resale and at retail in the States of North Carolina and South Carolina. Operating data in Carolina Power's 1961 FPC Form No. 1, Annul Report, and 1961 FPC Form 12, Power System Statement, shows that electric energy transmitted and sold at wholesale for resale and at retail on its system is generated outside the state in which it is consumed. Carolina Power owns and operates interconnected electric production and transmission facilities in the States of North Carolina and South Carolina, which facilities are also interconnected with electric facilities of Appalachian Power Company, Duke Power Company, South Carolina Electric and Gas Company, Southeastern Power Administration, Tennessee Valley Authority, Virginia Electric and Power Company, and Yadkin, Inc. Carolina Power regularly transmits or interchanges electric power and energy with each of these seven utility systems.

Carolina Power reports that it currently provides electric energy service at wholesale for resale to 39 purchasers for which it has no established rate schedules on file with this Commission. These purchasers are as follows: Mountain Retreat Association, Apex, Benson, Clayton, Farmville, Fayetteville, Fremont, Hookerton, Kinston, La Grange, Louisburg, New Bern, Pikeville, Red Springs, Rocky Mount, Selma, Smithfield, Southport, Wake Forest, Waynesville, and Wilson, North Carolina, Camden, South Carolina, Brunswick Electric Membership Corporation, Carteret-Craven EMC, Central EMC, Four-County EMC, Halifax EMC, Jones-Onslow EMC, Lumbee River EMC, Pamlico-Beaufort EMC, Pee Dee EMC, Piedmont EMC, Pitt-Greene EMC, Randolph EMC, South River EMC, Tri-County EMC, Wake EMC, Haywood EMC, and Harker's Island EMC. Carolina Power's Annual Report for 1961 shows that its wholesale sales to these purchasers totalled 1,083,958,366 kwh.* Its total wholesale sales for resale to all purchasers during 1961 were 1,238,882,438 kwh.*

Carolina Power currently has on file with this Commission the following rate schedules: Rate Schedule FPC Nos. 3 and 11, Tennessee Valley Authority; Rate Schedule FPC No. 7 and Supplement Nos. 1 (and Supplement No. 1 thereto) and 2 thereto, Rate Schedule FPC No. 8 and Supplement No. 1 thereto, Virginia Electric and Power Company; Rate Schedule FPC No. 10 and Supplement Nos. 1 and 2 thereto, Rate Schedule FPC Nos. 43 and 46, Yadkin, Inc.; Rate Schedule FPC No. 14, Laurel Hill Electric Company, Inc.; Rate Schedule FPC No. 17, Pinehurst, Incorporated; Rate Schedule FPC No. 19, French Broad Electric Membership Corporation; Rate Schedule FPC No. 23, Bennettsville, South Carolina; Rate Schedule FPC No. 25, Laurinburg, North Carolina; Rate Schedule FPC No. 29, Lumberton, North Carolina; Rate Schedule FPC No. 33, South Carolina Public Service Authority; Rate Schedule FPC Nos. 36 and 37, Housing Authority of Wilmington, North Carolina; Rate Schedule FPC Nos. 38, 39, 40, and 41, Federal Works Administration; Rate Schedule FPC No. 42, Southeastern Power Administration; Rate Schedule FPC No. 44, including Exhibit "A", and Supplement No. 1 thereto, Appalachian Power Company; and Rate Schedule FPC No. 45 and Supplement No. 1 thereto, Duke Power Company.

By order issued January 31, 1957 (17 FPC 83), *Carolina Aluminum Co., Carolina Power and Light Co.*, Docket No. E-6712, the Commission found Carolina Power to be a public utility within the meaning of that term as used in the Federal Power Act by reason of its ownership and operation of facilities, among others, for the transmission and sale at wholesale of electric energy which is transmitted between the States of North Carolina, South Carolina, Tennessee and Virginia, and consumed outside of the State in which it is generated.

*Does not include energy reported as delivered under interchange or wheeling arrangements.

By letter dated August 3, 1962, the foregoing information concerning unfiled rate schedules of Carolina Power was brought to the Company's attention by means of a staff request that the Company take appropriate action to establish rate schedules for the wholesale sales to the above-named 39 purchasers pursuant to the requirements of Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder. By letter dated August 17, 1962, Carolina Power requested an extension of time in which to file the rate schedules in question, and later by letter dated October 25, 1962, submitted certain data regarding these services for the information of the Commission but declined to undertake the filing of the rate schedules as requested by the staff. Carolina Power asserted that such sales do not appear to be subject to this Commission's jurisdiction under Section 205 of the Federal Power Act.

The Commission finds:

In view of the foregoing, it is necessary and appropriate for the purposes of the Federal Power Act that the Commission, pursuant to the authority of that Act, particularly Sections 205, 206, 308, and 309 thereof, enter upon a hearing at which Carolina Power shall show cause why the Commission should not find that the sales at wholesale for resale to the 39 purchasers referred to in the recital above are sales at wholesale in interstate commerce subject to the jurisdiction of this Commission under the provisions of the Federal Power Act for which Carolina Power must file appropriate rate schedules in the manner provided in Part 35 of the Commission's Regulations under the Federal Power Act.

The Commission orders:

(A) A public hearing shall be held at a time and place to be specified by notice of the Secretary at which Carolina Power shall show cause why the Commission should not:

(1) find and determine that Carolina Power continues to be a public utility within the meaning of that term as used in the Federal Power Act by reason of its ownership and operation of facilities for the transmission and sale at wholesale of electric energy in interstate commerce;

(2) find and determine that in each instance Carolina Power's sales to the 39 purchasers referred to in the recital above are sales at wholesale in interstate commerce, subject to the provisions of Sections 205 and 206 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder;

(3) find and determine that at least since January, 1961, Carolina Power has been violating and threatens to continue violating the provisions of Section 205(c) of the Act and Part 35.3 of the Commission's Regulations thereunder;

(4) order Carolina Power to file rate schedules for service to the 39 purchasers referred to in the recital above in accordance with the provisions and requirements of Section 205(c) of the Act and Part 35.3 of the Commission's Regulations thereunder; and

(5) issue such other orders and take such other actions as may be necessary or appropriate to bring about compliance with the Federal Power Act and the Commission's Regulations thereunder.

(B) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37) on or before March 1, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. RP62-9

ORDER GRANTING MOTION TO TERMINATE PROCEEDING

(Issued January 24, 1963)

Colorado Interstate Gas Company (Interstate) on November 28, 1962,[1] filed a motion requesting the dismissal and termination of this proceeding. This proceeding was initiated following Interstate's tender for filing of tariff sheets which would modify the provisions for unauthorized overrun penalties by providing for waiver of such penalties by Interstate under certain conditions. By order issued June 13, 1962, the Commission provided for hearing and suspended the tendered tariff sheets.[2] Thereafter, upon motion of the Public Utilities Commission of Colorado (PUC) and motions in support thereof filed by Interstate and the City and County of Denver, Colorado (Denver), by order issued September 24, 1962, the Commission permitted the tendered tariff sheets to become effective as of January 1, 1962.

The latter order also indicated the possible existence of a question of general policy and applicability respecting which other parties may desire to present their views. Thereafter, a number of pipeline companies and several distribution companies, which do not directly or indirectly receive gas from Interstate filed petitions to intervene. Five of the distribution customers receiving gas directly or indirectly from Interstate also filed petitions to intervene. No order has as yet been issued herein upon petitions to intervene.

Interstate's motion for dismissal of this proceeding, alternatively, requests the Commission to limit the issue to be heard to the waiver of overrun penalties issue which was initially prescribed by the Commission's order issued June 13, 1962. Interstate's motion to dismiss and its alternative motion are supported by motions filed by all of those parties petitioning to intervene who are directly affected by Interstate's proposed tariff modification. Interstate's alternative motion to limit the issues to the waiver provision is supported by motions filed by all of the parties petitioning to intervene who are not directly affected by Interstate's tariff.

In support of the aforementioned requests the various motions state, among other things, that Interstate's customers specifically requested the inclusion of waiver of penalty provisions in Interstate's tariff; no undue discrimination or unilateral advantage either has occurred or will be reasonably likely to occur in the foreseeable future with respect to waiver of overrun penalties; the unauthorized overruns which occurred during the winter of 1961–1962 were undoubtedly due to the inexperience of four customers in nominating contract demands under the new tariff provisions and to the abnormally cold winter peak day requirements; these four customers and one other have negotiated increased contract demands substantially to a level consistent with peaks reached last winter during abnormally low temperatures;[3] and with a fully committed capacity as now exists on its system, Interstate's operations do not have sufficient diversity to render them flexible enough to permit a customer in nominating its contract demand to anticipate exceeding such demand without

---

[1] Supplement to motion filed November 30, 1962.

[2] Original Sheet Nos. 8A and 11A; First Revised Sheet Nos. 5 and 8; and Second Revised Sheet Nos. 6, 10, and 11, to Interstate's FPC Gas Tariff, First Revised Volume No. 1.

[3] The Commission, by order of October 30, 1962, and by letter of December 21, 1962, accepted new service agreements which reflect increased contract demands of five of CIG's customers.

adversely affecting another customer and thereby subjecting itself to penalties under the tariff.

Upon reconsideration of our orders and after review of the various motions and the allegations therein set forth, we find that this proceeding should be terminated. That action is not intended to suggest that there is no problem concerning the opportunities for unilateral advantage or arbitrary practice that are presented by tariffs providing for unrealistic penalties and discretionary waivers. It appears, however, that this proceeding may not be the right vehicle to provide a solution to that problem. We propose therefore, to consider this problem at some later date in an appropriate general proceeding.

The Commission orders:

The proceedings instituted in this docket by our orders issued June 13 and September 24, 1962, hereby are terminated.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63-67

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 24, 1963)

On September 17, 1962, El Paso Natural Gas Company (Applicant) filed in Docket No. CP63-67 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction of small scale routine "budget-type" facilities during the calendar year 1963, the operation thereof, and the sale and delivery of natural gas by use thereof, and the sale and delivery of natural gas by use of facilities constructed, owned, and operated by Pacific Gas Transmission Company (PGT)[1], to Applicant's existing authorized resale customers for resale and general distribution, and for resale on a limited-term project basis for well drilling operations, all as more fully set forth in the application.

A. FACILITIES REQUIRED FOR NATURAL GAS SERVICE TO CUSTOMERS FOR RESALE AND GENERAL DISTRIBUTION

1. A total of thirty (30) main line taps, together with standard appurtenances necessary for the operation thereof, to be installed at various locations along the transmission pipelines of El Paso at an estimated cost of $400 for each installation and an aggregate cost not to exceed a maximum of $12,000.

2. A total of twenty-five (25) main line measuring and regulating and/or check metering stations to be installed at various locations along the transmission pipeline system of El Paso or adjacent to the transmission pipeline system of PGT, together with main line tap facilities to be installed on the

[1] PGT, under authority issued in Docket No. G-17350, will transport for the account of El Paso natural gas to be purchased by El Paso from Westcoast Transmission Company at Kingsgate, British Columbia. Deliveries of gas so transported will be made by PGT to El Paso at the delivery points, authorized in Docket No. CP62-59, specified by El Paso along PGT's pipeline in the States of Idaho, Washington and Oregon. At each point of delivery to El Paso, PGT will install, own and operate a transportation measuring station. Where the point of delivery by El Paso to its customers is adjacent to PGT's measuring facilities and El Paso's customers agree to accept, for billing purposes, the volumes as measured by PGT's measuring facilities, El Paso does not propose to install facilities additional to those installed by PGT.

transmission pipelines of El Paso as necessary, at an estimated cost of $2,000 to $8,000 for each installation and an aggregate cost not to exceed a maximum of $175,000.

3. A total of three (3) lateral pipelines of not less than 2⅜ inches nor more than 6⅝ inches in outside diameter together with, as necessary, related main line taps, measuring and regulating and/or check metering stations and the standard appurtenances necessary for the operation thereof to be installed at various locations along and extending from either the transmission pipelines of Applicant or the pipeline system of PGT, at an estimated cost not to exceed $350,000 for each installation and an aggregate cost not to exceed a maximum of $1,050,000.

B. FACILITIES REQUIRED FOR NATURAL GAS SERVICE TO CUSTOMERS FOR RESALE DRILLING GAS SERVICE

1. Main line or field line tap facilities, together with standard appurtenances necessary for the operation thereof, to be installed at up to a total of fifteen (15) separate locations, at an estimated cost of $400 for each installation and an aggregate cost not to exceed a maximum of $6,000.

2. Portable measuring and regulating facilities, together with standard appurtenances necessary for the operation thereof, to be installed at up to a total of fifteen (15) main line or field line tap locations, at an estimated cost of $1,200 for each installation and an aggregate cost not to exceed a maximum of $18,000.

The sale and delivery of natural gas to be made by utilization of the facilities described in Item A above is estimated to range from 50 Mcf per day to 500 Mcf per day per tap, from 50 Mcf per day to 5,000 Mcf per day per meter station and from 50 Mcf per day to 5,000 Mcf per day per lateral line with an annual volume to be delivered through all such facilities not to exceed 9,450,000 Mcf during the third year of operation, all measured at 14.73 psia.

The sale and delivery of natural gas to be made by utilization of the facilities described in Item B above is of a limited term and is estimated to range in volume from 200 Mcf to 3,000 Mcf per day well and the normal duration of drilling operations for each such well is anticipated to range from 30 to 90 days with an annual volume to be delivered through all of such facilities not to exceed 300,000 Mcf. The measuring and regulating facilities will be of a portable nature and may thus be utilized at successive locations following their removal from a prior drilling gas tap location.

The estimated maximum cost of all facilities for which certificate authority is sought by El Paso is $1,261,000. No increase in main line capacity is proposed by El Paso and rates and charges for all sales and deliveries made will be in conformity with rate schedules on file with the Commission.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 9, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Com-

mission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities during the calendar year 1963 and the transportation and sale of natural gas as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days from the expiration of the authorization hereinafter granted, a statement showing by project: (a) names and locations of customers, (b) description of facilities, (c) actual final cost, (d) annual and peak day volumes for each customer, (e) applicable FPC gas tariff and rate schedule for each customer, and (f) with regard to the facilities and sales for drilling operations, the revenues received from, together with the commencement and termination dates of service to, each customer.

(7) Under the authorization hereinafter granted construction should be limited to 30 main line taps not to exceed a total cost of $12,000; 25 meter stations not to exceed a total cost of $175,000; 3 lateral pipelines up to 6⅝ inches O.D. at a total cost not to exceed $1,050,000, with no single lateral to exceed a cost of $350,000; 15 main or field taps for well drilling purposes not to exceed a total cost of $6,000; 15 portable meter stations for well drilling purposes not to exceed a total cost of $18,000; all for the purpose of delivering gas to Applicant's existing authorized customers under its applicable FPC Gas Tariff, providing that such customers have the necessary local and state authorizations.

(8) Deliveries for general distribution should be limited to a maximum of 500 Mcf per day per tap, 5,000 Mcf per day per meter station and 5,000 Mcf per day per lateral pipeline, with an annual aggregate for all such facilities not to exceed 9,450,000 Mcf. The volume delivered for well drilling operations should not exceed 3,000 Mcf per day per well with a total annual volume not to exceed 300,000 Mcf.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order a certificate of public convenience and necessity be and the same is hereby issued authorizing El Paso Natural Gas Company to construct during the calendar year 1963 the proposed

facilities hereinbefore described all as more fully described in the application in this proceeding, and to operate such facilities for the transportation and sale of natural gas to supply existing authorized resale customers with natural gas and to sell and deliver natural gas to existing authorized resale customers for resale and distribution by use of the facilities owned by Pacific Gas Transmission Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit within 60 days after the expiration of the authorization hereinbefore granted, a statement showing by project: (a) names and locations of customers, (b) description of facilities, (c) actual final cost, (d) annual and peak day volumes for each customer, (e) applicable FPC gas tariff and rate schedule for each customer, and (f) with regard to facilities and sales for drilling operations, the revenues collected from, together with the commencement and termination dates of service to, each customer.

(D) The authorization hereinbefore granted is limited to construction of 30 main line taps not to exceed a total cost of $12,000; 25 meter stations not to exceed a total cost of $175,000; 3 lateral pipelines up to 6⅝ inches O.D. at a total cost not to exceed $1,050,000, with no single lateral to exceed a cost of $350,000; 15 main or field taps for well drilling purposes not to exceed a total cost of $6,000; 15 portable meter stations for well drilling purposes not to exceed a total cost of $18,000; all for the purpose of delivering gas only to Applicant's existing authorized resale customers under its applicable FPC Gas Tariff, providing that such customers have the necessary local and state authorizations.

(E) Deliveries for general distribution shall be limited to a maximum of 500 Mcf per day per tap, 5,000 Mcf per day per meter station and 5,000 Mcf per day per lateral pipeline, with an annual aggregate for all such facilities not to exceed 9,450,000 Mcf. The volumes delivered for well drilling operations shall not exceed 3,000 Mcf per day per well with a total annual volume not to exceed 300,000 Mcf.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-42

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 24, 1963)

On August 15, 1962, Northern Natural Gas Company (Applicant) filed in Docket No. CP63-42 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963 and the operation of measuring and regulating stations for the establishment of new and additional delivery points for delivery of natural gas to existing utility customers, without any increase in contract demand, for resale in areas which said customers are authorized to serve, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in establishing new and additional delivery points for the delivery of natural gas to existing customers without the necessity of

filing an application for a certificate of public convenience and necessity for each facility.

The total cost of the proposed facilities will not exceed a maximum of $200,000, and no single project will exceed a cost of $18,000. The subject facilities will be financed from cash on hand and funds generated through operations.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 8, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities for the establishment of new and additional delivery points for the delivery of natural gas to existing utility customers, without any increase in contract demand, for resale in areas which said customers are authorized to serve, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days from the date of expiration of the authorization hereinafter granted, a statement showing by projects: (a) the names and locations of customers receiving deliveries by means of each new delivery point constructed, (b) a description of the facilities installed, (c) actual final costs of such facilities, (d) estimated peak day and annual deliveries through said facilities, and (e) the rate to be charged each customer at the proposed new delivery point.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $200,000, with no single project to exceed a cost of $18,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Northern Natural Gas Company to construct during the calendar year 1963 the facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to deliver natural gas to or for the account of existing utility customers, without any increase in contract demand, for resale in areas which said customers are authorized to serve.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit within 60 days from the date of expiration of the authorization hereinbefore granted, a statement showing by projects: (a) names and location of customers receiving deliveries by means of each new delivery point constructed, (b) a description of the facilities installed, (c) actual final costs of such facilities, (d) estimated peak day and annual deliveries through said facilities, and (e) the rate to be charged each customer at the proposed new delivery point.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $200,000, with no single project to exceed a cost of $18,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP63-35

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 24, 1963)

On July 31, 1962, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP63-35 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the transportation and sale of natural gas for and to Gulf Oil Corporation (Gulf), all as more fully set forth in the application.

Applicant seeks authorization to:

(1) transport, on a high priority interruptible basis, for the account of Gulf, up to 6000 Mcf of natural gas per day produced by Gulf, from a point of receipt in Claiborne Parish, Louisiana, to a proposed point of delivery to Gulf in Hamilton County, Ohio;

(2) sell to Gulf, on an interruptible basis, up to 5000 Mcf of natural gas per day at the proposed Hamilton County delivery point during the period when Gulf is drilling the wells necessary to supply the daily delivery volumes to be transported by Applicant; and

(3) construct and operate a meter station at the proposed point of delivery at a cost of $4,470.

The volumes of gas proposed to be transported for, and sold to, Gulf will be used by Gulf as fuel in its Cleves, Ohio, refinery following the completion of

an extensive modernization of the refinery. The gas will displace oil as fuel in the refinery.

Applicant was issued a temporary certificate on September 6, 1962, to undertake the subject construction and service.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 8, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Texas corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G–859 (8 FPC 228).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the transportation and delivery of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Gas Transmission Corporation, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63-98

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 24, 1963)

On October 17, 1962, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP63-98 an application pursuant to Section 7(b) of the Natural Gas Act, for authority to abandon certain facilities consisting of approximately 545 feet of 8 inch lateral pipeline running from its Ashmead Road Meter Station in Cheltenham Township, Montgomery County, Pennsylvania to the Levick Street facilities of Philadelphia Gas Works Division of the United Gas Improvement Company at the City Limits of Philadelphia, known as the, "Ashmead Road Lateral." The said stretch of pipeline, except for a short length thereof is now not being used because the United Gas Improvement Company is taking the gas from Applicant through its own pipeline from the Ashmead Road Meter Station to a point near the Levick Street facilities.

Applicant has negotiated a sale of the 545 feet of pipeline above described to the United Gas Improvement Company for $3,163.68.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 14, 1963, respecting the matters involved in and the issues presented by the application. No petition to intervene or protest to the granting of the application has been received. Staff Counsel, moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company within the meaning of the Natural Gas Act and the facilities are described in the application as being subject to the jurisdiction of the Commission.

(2) The use of the stretch of pipeline sought to be abandoned by Applicant is now discontinued due to the construction and use of other facilities by The United Gas Improvement Company to maintain the same service previously rendered by Applicant's facilities. The public convenience and necessity does not require such duplicate facilities.

(3) The sale by the Applicant of the facilities described herein to The United Gas Improvement Company has been agreed upon by the parties.

(4) A request made during the public hearing by Staff Counsel for the omission of the intermediate decision procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record, and not having been denied by the Commission is granted pursuant to Section 1.30(c)(1) of the said rules.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon the facilities heretofore described, as more fully described in the application.

(B) Applicant shall advise the Commission as to the date of settlement of sale of the said facilities within 10 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

TRUNKLINE GAS COMPANY, DOCKET NO. CP63-40

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 24, 1963)

On August 14, 1962, as supplemented on August 27, 1962, Trunkline Gas Company (Applicant) filed in Docket No. CP63-40 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the transportation of natural gas in interstate commerce for sale to Missouri Portland Cement Company (Missouri Portland), Joppa, Massac County, Illinois, all as more fully set forth in the application.

Applicant seeks authorization to construct and operate a sales meter station and connections necessary for the delivery of natural gas from Applicant's main line to said sales meter station. Applicant also seeks authorization to transport natural gas in interstate commerce for an interruptible sale to Missouri Portland of 2,000 Mcf of gas per day. Applicant estimates that the average annual sales will be 175,000 Mcf of gas per year. The gas will be used for raw material drying and space heating.

The estimated cost of the proposed facilities is $28,500, to be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 10, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G-882 (8 FPC 250).

(2) The facilities herein before described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the delivery of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act

and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to Applicant, Trunkline Gas Company, authorizing the construction and operation of the proposed facilities and the delivery of natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-10

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 24, 1963)

On July 12, 1962, as supplemented on August 29, 1962, United Gas Pipe Line Company (Applicant) filed in Docket No. CP63-10 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval of the Commission to abandon the 2,560 h.p. Waskom No. 2 Compressor Station in Harrison County, Texas, all as more fully set forth in the application as supplemented.

The Waskom No. 2 Compressor Station was constructed in 1927 and 1928 as a field station to compress gas from the Waskom Area. The station was continued in operation until depletion of known shallow reservoirs in the field and has been held in readiness since 1946 in the event that any additional gas developed in the area. Applicant does not foresee any future development of shallow reservoirs in this field which will require use of the compressor station at its present location and therefore requests permission and approval for the abandonment of said facilities.

The original cost of the facilities was $282,408.53; the depreciated cost is $16,524; and the net salvage is estimated at $2,500.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 10, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, are subject to the jurisdiction of the Commission, and the abandonment of said facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(4) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, United Gas Pipe Line Company, of the facilities hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of the subject abandonment within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63–46

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 24, 1963)

On August 20, 1962, United Gas Pipe Line Company (Applicant) filed in Docket No. CP63–46 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963 and operation of facilities to render temporary direct service for road construction projects in areas generally coextensive with Applicant's pipeline system, all as more fully set forth in the application.

The purpose of this "budget-type" application is to permit Applicant to act with reasonable dispatch in establishing temporary, relatively low cost, delivery points without the delay incident to the processing of individual certificate applications.

Applicant anticipates approximately 25 projects at an individual cost not to exceed $800 per project and states that the average customer uses approximately 14,000 Mcf of natural gas.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 9, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting

of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Ast as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to render temporary direct service for road construction projects in areas generally co-extensive with Applicant's system are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization hereinafter granted, a statement showing by project: (a) name and location of customer served, (b) description of facilities installed, (c) gross and net cost reflecting cost of salvaged facilities, (d) estimated date of termination of service, and (e) actual and estimated sales and revenue.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total number of sales shall be limited to 25 with maximum expenditure not to exceed $20,000, and no single project to exceed a cost of $800.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing United Gas Pipe Line Company to construct during the calendar year 1963 the facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to render temporary direct service for road construction projects to 25 customers in areas generally co-extensive with Applicant's pipeline system.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit within 60 days after the expiration of the authorization herein granted, a statement showing by project: (a) name and location of customer served, (b) description of facilities installed, (c) gross and net cost reflecting cost of salvaged facilities, (d) estimated date of termination of service, and (e) actual and estimated sales and revenue.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $20,000, with no single project to exceed a cost of $800.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

VALLEY GAS TRANSMISSION, INC., DOCKET NO. CP63-93

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 24, 1963)

On October 11, 1962, as supplemented on November 2, 1962, Valley Gas Transmission, Inc. (Applicant), filed in Docket No. CP63-93 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during a 12-month period, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $500,000, and no single project will exceed a cost of $50,000. The proposed facilities will be financed from funds on hand, cash generated from normal operations, and financing already arranged.

On December 6, 1962, Applicant was granted a temporary certificate authorizing the construction and operation of facilities to connect a well of the Superior Oil Company in Duval County, Texas, at a cost not to exceed $50,000.

Applicant requests that the Commission waive Section 2.58(a) of its General Policy and Interpretations in order that Applicant may be afforded greater flexibility necessary to attach reserves without the delays resulting from the processing of individual certificate applications. In view of the size and nature of Applicant's operations, it appears appropriate to waive Section 2.58(a) in this case.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 8, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Valley Gas Transmission, Inc., a Texas corporation having its principal place of business in Houston, Texas, is a "natural-gas company"

within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 29, 1960, in Docket No. G–19618 (25 FPC 233).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the requirements of Section 2.58(a) of the Commission's General Policy and Interpretations should be waived and that the authorization hereinafter granted should be limited to construction during the 12-month period commencing on the date on which this order issues, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $500,000, with no single project to exceed a cost of $50,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Valley Gas Transmission, Inc., to construct during the 12-month period commencing on the date on which this order issues the proposed facilities hereinbefore described as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Valley Gas Transmission, Inc.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The requirements of Section 2.58(a) of the Commission's General Policy and Interpretation are hereby waived and the authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing on the date on which this order issues, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $500,000, with no single project to exceed a cost of $50,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

CAROLINA PIPELINE COMPANY, COMPLAINANT v. SOUTHERN NATURAL GAS COMPANY, DEFENDANT, DOCKET NO. RP63-4

ORDER PROVIDING FOR HEARING, DESIGNATING PROCEDURE AND FIXING DATE FOR PREHEARING CONFERENCE

(Issued January 25, 1963)

On September 6, 1962, Carolina Pipeline Company (Carolina) filed a formal complaint naming one of its suppliers, Southern Natural Gas Company (Southern) as defendant. Therein Carolina, among other things, prays for a hearing; for an order directing Southern to cease and desist from discrimination against Carolina; for an order directing Southern to furnish CD service to Carolina and for such other and further relief as may be warranted in the premises. The action is filed under Sections 4(b) and 5(a) of the Natural Gas Act.

Carolina operates a natural gas pipeline system entirely within the State of South Carolina and has been exempted from the provisions of the Act under Section 1(c) thereof. The western portion of Carolina's facilities is not involved in this proceeding. The portion involved herein constitutes a V-shaped system of pipelines lying across the state in an east-west direction with its apex toward the sea. The northern leg terminates at a delivery point close to the North Carolina border while the southern leg extends to a delivery point near the border of Georgia, at Aiken, South Carolina.

Transcontinental Gas Pipe Line Corporation (Transco) is authorized to deliver approximately 25,000 Mcf of gas per day to Carolina on the northern leg,

while Southern is authorized to deliver at present approximately 7,500 Mcf per day to Carolina at Aiken on the southern leg.[1]

Southern commenced deliveries to Carolina at Aiken, South Carolina on October 26, 1961, pursuant to a certificate issued to Southern (25 FPC 518) under Southern's CDL–3 and its AOL–3 rate schedules.

The complaint alleges, among other things, (1) that Southern's CDL–AOL rate schedules under which Carolina purchases gas, permits discrimination and that in consequence thereof, Southern is enabled to effect undue discrimination against Carolina in deliveries of overrun gas; (2) that the language of the rate schedules is unduly discriminatory in several respects; that, for example, the word "pipeline" works to give preference to customers of Southern who have only one source of supply; (3) that this prevents their accepting gas from potential alternate sources of supply and consequently restricts competition; (4) that because in one period, 35 percent of available overrun gas went to one "pipeline" CD customer, namely, South Carolina Natural Gas Company for use as boiler fuel, Carolina had to curtail its service to small industrial customers, schools and hospitals; (5) that CD customers are permitted to take unlimited overruns until notified by Southern to limit the takes to their contracts, while CDL–AOL customers such as the complainant, can obtain overrun gas only after Southern notifies them that overruns are available; (6) that by reason of the CDL–AOL rate schedules and the manner in which Southern operates, CD customers are protected against undue discrimination while Carolina is subject to it in numerous ways.

Southern filed its answer to the foregoing complaint on October 8, 1962, setting forth what amounts to a general denial of undue discrimination, and also submitted certain allegations of fact and argument. Among other features of its answer, Southern appears to hold the view that the two parties bargained and contracted for what they obtained and that having so contracted, the Commission's past acceptance of the rate schedules established a relationship which should not be disturbed, nor made the subject of a public hearing.

Carolina filed its reply on October 23, 1962, alleging, among other things, that Southern specifically admits that the CDL–AOL rate schedules are discriminatory and furthermore, that there was no way for the Examiner who sanctioned them to know that they would be used by Southern as a means of effecting undue discrimination; further, that the availability provision of Southern's rate schedules entitles Carolina to the CD Service which it demands.

The pleadings appear to leave unresolved some substantial questions of fact and law bearing upon (1) whether the rate schedules complained against are discriminatory; (2) whether the operations under them are discriminatory and (3) whether if discrimination exists, it is undue discrimination in violation of Section 4 or 5 of the Act. An additional issue may be whether there is evidence of probable violation of the Anti-Trust Laws and need for transmission of evidence to the Attorney General pursuant to Section 20(a) of the Natural Gas Act.

It appears that a public hearing should be held in order to afford all parties opportunity to present evidence concerning the issues herein; that Carolina bears the burden of proof and the obligation of going forward first in the presentation of its case-in-chief; that the issues herein should be determined with the greatest possible expedition and to that end, each party should have the opportunity to understand and evaluate the positions of the other parties; that the genuine disputes which can be resolved only in hearing should be listed; and that

[1] Southern F.P.C. Gas Tariff, Sixth Revised Vol. No. 1, substitute original sheets Nos. 29A through 29C and original sheets Nos. 29D through 29E.

all matters which can be fully resolved without formal trial should be eliminated from hearing and settled by stipulation.

For the purpose of expediting the proceeding, the Commission deems it appropriate that Carolina submit, within the time hereinafter fixed, its prepared testimony and exhibits pertaining to its direct case-in-chief; that thereafter within the time indicated below, Southern, if it elects to defend, submit the prepared testimony and exhibits of its direct case as defendant, together with a list which will identify those matters of fact and law wherein Southern takes issue with the contentions of Carolina; that thereafter, within the time indicated below, the Commission staff and all interveners proposing to submit evidence in this proceeding shall serve their prepared testimony and exhibits upon all parties.

Upon completion of the service of the testimony and exhibits, constituting the cases-in-chief of the complainant and defendant, the Presiding Examiner assigned to this proceeding shall convene a prehearing conference as herein after provided and at which he shall preside for the purposes of reaching a stipulation upon the issues which can be eliminated from hearing and of setting forth clearly the substantial matters to be resolved by formal hearing.

The Presiding Examiner shall then set the date for service by Carolina of its rebuttal case and issue immediate notice of the date of hearing on the issues to be tried; which when commenced shall be continuous and shall be directed to full cross-examination of all witnesses testifying with respect to the issues being tried, in accordance with the procedure prescribed by the Presiding Examiner.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the issues raised by the complaint filed by Carolina be determined by public hearing and that the proceeding be expedited in accordance with the procedures set out below.

The Commission orders:

(A) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act (18 CFR, Chapter I), a public hearing be held concerning the matters involved and the issues presented in this proceeding.

(B) At the hearing herein, the complainant, Carolina, shall have the burden of proof and the obligation of going forward first with the presentation of its direct case-in-chief.

(C) Carolina, shall serve its prepared testimony and exhibits of its case-in-chief upon all parties, on or before February 18, 1963.

(D) The defendant, Southern, shall serve the prepared testimony and exhibits of its direct case upon all parties on or before March 11, 1963.

(E) The Commission staff and all other parties to this proceeding proposing to present evidence herein, shall serve the prepared testimony and exhibits of their direct cases on all parties on or before April 10, 1963.

(F) Presiding Examiner, Max L. Kane, or any other officer or officers of the Commission designated by the Chief Examiner for that purpose (see delegation of authority, 27 FR 4276, etc.) shall preside at the pre-hearing conferences and at the hearing in this matter, pursuant to the Commission's Rules of Practice and Procedure, and as further provided by this order.

(G) Without limitation upon the authority of the Presiding Examiner to convene pre-hearing conferences prior to, or subsequent to the date herein fixed,

pursuant to the provisions of Section 1.18 of the Commission's Rules of Practice and Procedure, a pre-hearing conference before the Presiding Examiner herein designated shall commence at 10:00 a.m. (EST) on March 25, 1963, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., for the purpose of effectuating the intent of the Commission as hereinabove set out in the body of this order.

(J) Notices and petitions to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Commission's Rules of Practice and Procedure, Sections 1.8 and 1.37(f) [18 CFR 1.8 and 1.37(f)] on or before February 15, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

M. B. CHASTAIN (OPERATOR), ET AL.

ORDER ACCEPTING OFFER OF SETTLEMENT, AND PERMITTING WITHDRAWAL OF RATE FILING

(Issued January 25, 1963)

On December 31, 1962, M. B. Chastain (Operator) *et al.* (Chastain) tendered for filing a notice of change in its presently effective FPC Gas Rate Schedule No. 5, for the jurisdictional sale of natural gas to Texas Gas Transmission Corporation (Texas Gas) from the Carthage Field, Panola County, Texas (Railroad Commission District No. 6). Chastain has requested that the proposed redetermined rate increase, from the presently effective rate of 13.1456¢ per Mcf at 14.65 psia, to 14.764¢ per Mcf, including tax reimbursement, be made effective on January 1, 1963.

Concurrently with the filing of the proposed increased rate, Chastain filed an Offer of Settlement to settle the issues raised by its rate filing. Chastain proposes to withdraw its increased rate filing if the Offer of Settlement is accepted. Under the terms of the offer, the price redetermination clause is to be eliminated from the rate schedule involved, and a revised schedule of 1.0¢ per Mcf escalations, at five-year intervals beginning January 1, 1968, is to be substituted from the existing escalation provisions. It is proposed that a settlement rate of 14.6¢ per Mcf be established effective January 1, 1963.

In support of its offer, Chastain cites the deletion of the price redetermination provision from its gas purchase contract with Texas Gas, and states that such provision was in important element of consideration required by Chastain under the contract for the long-term commitment of its gas reserves to the performance of the contract. Texas Gas has concurred in the offer and has agreed to execute the contract amendment provided for therein.

Since the proposed settlement rate of 14.6¢ per Mcf at 14.65 psia is acceptable under the provisions of the Second Amendment[1] to the Commission's Statement of General Policy No. 61–1,[2] for jurisdictional sales of natural gas in Texas Railroad Commission District No. 6, it is believed that the public interest will best be served by accepting Chastain's proposed settlement as hereinafter set forth. The proposed settlement rate should be made effective January 31, 1963, upon expiration of the required statutory notice.

[1] Issued December 20, 1960, 24 FPC 1107.
[2] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

However, we desire to make it clear that acceptance of the Offer of Settlement shall not be construed as approval of any future increased rate proposed by Chastain under the periodic escalation provisions or otherwise.

The Commission finds:

The proposed settlement of the issues raised by Chastain's proposed increased rate filing, on the basis described herein, as more fully set forth in the Offer of Settlement filed by Chastain with the Commission on December 31, 1962, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved by the Commission and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Chastain with the Commission on December 31, 1962 is hereby approved in accordance with the provisions of this order.

(B) Chastain shall file within 30 days from the date of issuance of this order a notice of change providing for the 14.6¢ per Mcf, inclusive of present tax reimbursement, specified in its Offer of Settlement and a contractual amendment to its FPC Gas Rate Schedule No. 5, which Chastain shall execute with Texas Gas in conformity with Chastain's Offer Settlement in all respects. Both the notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) The notice of chance in Chastain's FPC Gas Rate Schedule No. 5, tendered for filing on December 31, 1962, shall be considered withdrawn as of the date of issuance of this order, and upon notification by the Secretary of the Commission that Chastain has complied with the terms and conditions of this order, the rate and charge of 14.6¢ per Mcf, inclusive of present tax reimbursement, specified in the Offer of Settlement shall be effective as of January 31, 1963.

(D) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending or hereafter instituted by or against Chastain.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. CP63–80

ORDER DENYING APPLICATION FOR REHEARING

(Issued January 25, 1963)

On January 16, 1963, George F. Toney, *et al.*[1] (Toney, *et al.*) filed in Docket No. CP63–80 an application for rehearing of the Commission's order issued January 11, 1963, *supra*, p. 64, in said docket. By that order, the Commission denied Toney, *et al.'s* petition of December 31, 1962, to intervene in this proceeding.

Toney, *et al.'s* application sets forth essentially a reiteration of the contentions of their petition to intervene. We have stated in our order denying interven-

[1] George F. Toney, Bertha M. Toney, James H. Mason, Alta Mason, Delbert O. Dunlap, Robert Dunlap, Dorothea R. Dunlap, Joseph Dunlap, Maude Dunlap, Imogene Dunlap, Earl Cockcroft, Gladys Cockcroft, Waller F. Barkley, Elsie E. Barkley, Frank Stratton, Max Landes, H. B. Lukken, Nina C. Lukken, Sherman A. Maynard, Harold Cartwright, Leatha Cartwright, Esther Shanks, Dell Shanks, Kenneth R. Wilhoit, Mildred N. Wilhoit, Harry C. Scott, Dorothy Scott, Maude Barkley, and Irving W. Voorhees.

tion that the only issue of fact or law which Toney, *et al.*, would raise pertains to their claimed property interests which are not affected by our action here. The application for rehearing does not set forth any new facts or principles of law which indicate that we were in error in denying intervention.

The Commission finds:

The assignments of error and grounds for rehearing in the above-described application for rehearing set forth no new facts or principles of law which either were not fully considered by the Commission when it issued its order of January 11, 1963, denying Toney, *et al.*, leave to intervene or which having now been considered warrant any change or modification of said order.

The Commission orders:

Toney, *et al.'s* application for rehearing of the Commission's order issued January 11, 1963, in Docket No. CP63-80, is hereby denied.

Commissioner Morgan *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. CP63-80

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 25, 1963)

On October 1, 1962, as supplemented on November 7, 1962, Midwestern Gas Transmission Company (Applicant) filed in Docket No. CP63-80 an application pursuant to Section 7(c) of the Natural Gas Act authorizing the construction and operation of certain facilities for the purpose of testing and evaluating three proposed storage fields located in the Nevins and Elbridge Fields, Edgar County, Illinois, and the State Line Field, Clark County, Illinois, and Vigo County, Indiana, all three proposed projects located adjacent to Applicant's southern system pipeline, all as more fully set forth in the application, as supplemented.

Applicant states that the average load factor at which its southern system is operated can be improved through the development of economical underground storage facilities capable of storing large volumes of natural gas near the ultimate market during periods of low consumer demand. Applicant states further that no storage service to any customer is proposed in the subject application, and that Applicant will seek authorization to render such storage service when the capabilities of the proposed storage fields are determined.

Applicant proposes to inject up to 4,000,000 Mcf of natural gas into the proposed storage areas during the testing program.

The estimated cost of the proposed projects is $4,489,400, which cost will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 15, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, herein. On December 31, 1962, George F. Toney, *et al.*,[1] filed a petition to intervene in this proceeding; however, by order

[1] George F. Toney, Bertha M. Toney, James H. Mason, Alta Mason, Delbert O. Dunlap, Robert Dunlap, Dorothea R. Dunlap, Joseph Dunlap, Maude Dunlap, Imogene Dunlap, Earl Cockcroft, Gladys Cockcroft, Waller F. Barkley, Elsie E. Barkley, Frank Stratton, Max Landes, H. B. Lukken, Nina C. Lukken, Sherman A. Maynard, Harold Cartwright, Leatha Cartwright, Esther Shanks, Dell Shanks, Kenneth R. Wilhoit, Mildred N. Wilhoit, Harry C. Scott, Dorothy Scott, Maude Barkley, and Irving W. Voorhees.

issued January 11, 1963, *supra*, p. 64, said intervention was denied. No other petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Midwestern Gas Transmission Company, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued May 12, 1959, in Docket No. G-16841 (21 FPC 653).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) The total expenditure for the facilities hereinafter authorized should be limited to a maximum of $4,489,400.

(7) The total volume of gas to be injected during the test period should not exceed a total of 4,000,000 Mcf.

(8) Applicant should submit, within 60 days after the end of the 12-month period following the date on which this order issues, a statement showing, by projects:

(a) a description of the facilities constructed during said 12-month period,

(b) the location of such facilities,

(c) the cost of such facilities,

(d) an estimate of the capacity of each successful project, and

(e) the volume of gas injected into and withdrawn from each reservoir.

(9) This order should not be construed as authorizing Applicant to capitalize interest during construction "at the rate of 7% per annum to the monthly balances of construction expenditures plus one-half of 7% per annum on each month's construction activity." Further the Commission reserves the right to review the Applicant's accounting as to the appropriate rate for such interest during construction.

(10) Applicant should record non-recoverable gas in Account 117, Gas Stored Underground, Non-current, unless the Commission subsequently orders or directs otherwise.

(11) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of

record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Midwestern Gas Transmission Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The total expenditure for the facilities authorized in paragraph (A) above is hereby limited to a maximum of $4,489,400.

(D) The total volume of gas to be injected during the test period shall not exceed a total of 4,000,000 Mcf.

(E) Applicant shall submit, within 60 days after the end of the 12-month period following the date on which this order issues, a statement by projects:

(a) a description of the facilities constructed during said 12-month period,

(b) the location of such facilities,

(c) the cost of such facilities,

(d) an estimate of the capacity of each successful project, and

(e) the volume of gas injected into and withdrawn from each reservoir.

(F) This order shall not be construed as authorizing Applicant to capitalize interest during construction "at the rate of 7% per annum to the monthly balances of construction expenditures plus one-half of 7% per annum on each month's construction activity." Further the Commission reserves the right to review the Applicant's accounting as to the appropriate rate for such interest during construction.

(G) Applicant shall record non-recoverable gas in Account 117, Gas Stored Underground, Non-current, unless the Commission subsequently orders or directs otherwise.

CHRISTIE, MITCHELL & MITCHELL COMPANY, ET AL., DOCKET NO. G–15033, ET AL.[1]

ORDER ACCEPTING PROPOSED OFFER OF SETTLEMENT, TERMINATING CERTAIN PROCEEDINGS IN WHOLE AND OTHERS IN PART, PROVIDING FOR REFUNDS, AND ACCEPTING INCREASED RATE FILINGS

(Issued January 29, 1963)

On November 29, 1962, as supplemented December 14, 1962, Christie, Mitchell & Mitchell Company (Christie), submitted an Offer of Settlement, pursuant to

---

[1] Additional proceedings involved in this order are listed in Appendix A attached hereto.

Section 1.18(e) of the Commission's Rules of Practice and Procedure, of the proceedings involving five suspension dockets pertaining to Christie's FPC Gas Rate Schedules Nos. 9 and 11. The contracts comprising these rate schedules are for Christie's jurisdictional sales of natural gas to Texas Eastern Transmission Corporation (Texas Eastern) from several fields and counties in Texas Railroad Commission District No. 2.

In its Offer of Settlement, Christie proposes: (1) that in return for permitting a rate of 14.6¢ per Mcf to be effective for gas sold from the Vienna Field [2] under its FPC Gas Rate Schedule No. 9, Christie agrees to eliminate from the related contract, with respect to the Vienna Field sale, the favored-nation clause contained therein, and to replace the annual escalations with 1.0¢ per Mcf periodic increases proposed to be effective on November 1, 1963, 1968, and 1973; (2) that in return for permitting a rate of 13.8733¢ per Mcf under its FPC Gas Rate Schedule No. 11, Christie agrees to eliminate from the related contract the favored-nation and price redetermination clauses contained therein, and to replace the annual escalations with 0.5¢ per Mcf periodic increases proposed to be effective on February 5, 1963, 1968, and 1973; (3) to refund to Texas Eastern all money collected subject to refund in excess of the proposed settlement rates under the subject rate schedules; and (4) the termination of the suspension proceedings involved herein.

As part of the settlement offer, Christie concurrently submitted notices of change wherein it proposes renegotiated rate increases of 1.9411¢ per Mcf from 11.9322¢ per Mcf to 13.8733¢ per Mcf under its FPC Gas Rate Schedules Nos. 10 and 17 (such increased rates are hereinafter referred to as Supplements Nos. 15 and 6, respectively) which pertain to Christie's sales to Texas Eastern from Goliad and DeWitt Counties, Texas Railroad Commission District No. 2, and requests that such increased rate proposals become effective on the date the Commission approves the Offer of Settlement. Such notices of change include copies of July 1, 1962 letter agreements with Texas Eastern providing for the 13.8733¢ per Mcf rates and deletion of favored-nation and price redetermination clauses, with replacement of annual escalations with 0.5¢ per Mcf periodic escalations on February 5, 1963, 1968 and 1973.

Texas Eastern has joined in the Offer of Settlement and has agreed, in the event the offer is accepted by the Commission, to make the contract changes or amendments provided in the offer. No objections to the proposed settlement have been received from intervenors or other interested parties.

Since the proposed settlement rates under Christie's FPC Gas Rate Schedules Nos. 9, 10, 11, and 17 are acceptable under the provisions of the Second Amendment of the Commission's Statement of General Policy No. 61–1,[3] issued December 20, 1960, for Christie's jurisdictional sales of natural gas from Texas Railroad Commission District No. 2, it appears that the public interest will be best served by accepting Christie's Offer of Settlement.

We desire to make it clear that acceptance of this Offer of Settlement shall not be construed as approval of any future increased rates proposed by Christie under the periodic escalation provisions or otherwise.

---

[2] Rate Schedule No. 9 also relates to gas sales to Texas Eastern from the South Sheridan Field, Colorado, Texas (Texas Railroad Commission District No. 3); however, Christie's offer does not pertain to such sales.

[3] 18 CFR, Chapter 1, Part 2, Section 2.56; 24 FPC 1107; 25 F.R. 13799.

The Commission finds:

(1) The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in Christie's Offer of Settlement of November 29, 1962, is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective subject to the terms and conditions ordered.

(2) Good cause exists for terminating certain proceedings in whole and others in part, for providing for refunds, and for accepting for filing Supplements Nos. 15 and 6 to Christie's FPC Gas Rate Schedules Nos. 10 and 17, respectively.

The Commission orders:

(A) The Offer of Settlement filed by Christie on November 29, 1962, as supplemented December 14, 1962, is hereby approved and made effective as of the date of the issuance of this order, subject to the following terms and conditions.

(B) Christie shall file within 60 days from the date of issuance of this order a notice of change to its FPC Gas Rate Schedule No. 9 providing for the 14.6¢ per Mcf rate specified in its Offer of Settlement, and contractual amendments to its FPC Gas Rate Schedules Nos. 9 and 11, which Christie shall execute with Texas Eastern in conformity with Christie's Offer of Settlement in all respects. Both the notice of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) The settlement rates which are set out in the Appendix A, attached hereto as part of this order, are approved and made effective as of the date of the issuance of this order.

(D) Within 60 days from the date of the issuance of this order Christie shall refund to Texas Eastern all amounts collected from Texas Eastern in excess of the rates agreed upon in the Offer of Settlement, together with simple interest as specified in each docket, from the respective dates of receipt of the excess amounts by Christie to the dates of refund. Christie shall bear all costs incidental to the making of such refunds.

(E) Within 60 days from the date of the issuance of this order, Christie shall report to the Commission the details of its calculations resulting in refunds ordered pursuant to paragraph (D) above, together with a copy of a release from Texas Eastern with respect to such refunds.

(F) Upon full compliance by Christie with all of the terms and conditions of this order and acceptance of the filings made pursuant hereto, the proceedings in Docket Nos. G–16180, G–19928, and RI61–219 are terminated only insofar as they relate to Christie's sale from Vienna Field, Lavaca County, Texas (Texas Railroad Commission Railroad District No. 2), and the proceedings in Docket Nos. G–15033 and RI62–127 are terminated in full.

(G) Supplements Nos. 15 and 6 to Christie's FPC Gas Rate Schedules Nos. 10 and 17, respectively, are hereby accepted for filing subject to the terms of the Offer of Settlement, and are effective as of the date of the issuance of this order.

(H) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceedings which are presently being heard, or in any proceeding now pending, or hereinafter instituted by or against Christie.

Commissioner Morgan *not participating.*

APPENDIX A

Docket No.	FPC Gas Rt. Sch. No.	Supp. No.	Texas County	Texas Railroad Commission No.	Suspended rts. (14.65 psia)	Effective date	Settlement rts.[1] (14.64 psia)

EL PASO NATURAL GAS COMPANY, DOCKET NOS. G-4769, G-12948, G-17929 AND RP60-3

ORDER DENYING MOTION

(Issued January 29, 1963)

On December 31, 1962, the People of the State of California and the Public Utilities Commission of the State of California (California), filed a motion requesting the Commission to issue an order requiring El Paso Natural Gas Company (El Paso), to make immediate refunds in Docket Nos. G-12948, G-17929 and RP60-3 in accordance with the rate of return determinations of the Commission contained in Opinion No. 366, issued October 19, 1962, 28 FPC 688.

In support of its motion, California alleges that in view of the Supreme Court opinion in *Federal Power Commission* v. *Tennessee Gas Transmission Company*, U.S. Nos. 48 and 50, December 3, 1962, the Commission is failing in its duty under the Natural Gas Act by permitting El Paso the option of deferring refunds in Docket Nos. G-12948, G-17929 and RP60-3; that the Commission action is not equitable to consumers of natural gas for whose protection the Natural Gas Act was designed and that the Fifth Circuit Court of Appeals refused to stay the refund ordered by the Commission in Docket No. G-4769 and the reduction in the current rates in Docket No. RP60-3. California further states that because the rate increases involved in these proceedings span a time approaching 8 years, now is the time to afford the relief to which Opinion No. 366 entitles them.

On January 4, 1963, El Paso filed its answer and objection to California's motion alleging that the relief sought by California is inconsistent with the interim order procedure, including the deferral of refunds, that no other participant (excluding El Paso), had objected to the deferral of refunds until the present motion, that California has failed to exhaust its administrative remedies and that California has presented nothing to the Commission that was not before it when it previously considered the matter.

In answer to California's motion, Southern Union Gas Company (Southern Union) on January 7, 1963, states that if El Paso is required to make interim

refunds, unless they are required to adhere to the rate differential approved by this Commission in Opinion No. 326, 22 FPC 260, the result will be to discriminate against El Paso and its affected Arizona, New Mexico and Texas customers.

On page 954 of our order denying rehearing, issued December 7, 1962, 28 FPC 952, we stated as follows:

> It may be noted in connection with this decision [*Federal Power Commission* v. *Tennessee Gas Transmission Co.*, U.S. Nos. 48 and 50, December 3, 1962], that we would have been justified in ordering immediate refunds in all dockets in the present proceeding except that in our order establishing the interim order procedure we stated that refunds would not be ordered. It would not be equitable to alter the contemplated procedure at this late stage. (Citation added.)

California in its motion of December 31, 1962, has set forth no facts or principles of law which were not fully considered by the Commission when the above determination was made in our order of December 7, 1962, or which, having now been considered, warrant any change or modification of this determination.

The Commission finds:

For the reasons above stated, the motion of California should be denied.

The Commission orders:

The motion of California for further interim relief, filed December 31, 1962, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

FOREST OIL CORPORATION, DOCKET NO. G–5510

ORDER CONDITIONALLY ACCEPTING OFFER OF SETTLEMENT, PROVIDING FOR REFUNDS, AND TERMINATING PROCEEDING

(Issued January 29, 1963)

On August 30, 1962, Forest Oil Corporation (Forest) submitted, in accordance with the provisions of Section 1.18(e) of the Commission's Rules of Practice and Procedure, an offer of Settlement of the suspension proceeding in Docket No. G–5510 involving the jurisdictional sale of natural gas to Transcontinental Gas Pipe Line Corporation (Transco) from Pine Bluff Field, Acadia Parish, South Louisiana under Forest's FPC Gas Rate Schedule No. 1.

Forest's gas purchase contract with Transco, dated August 24, 1954 and filed as Forest's FPC Gas Rate Schedule No. 1, provided for a price of 8.797150¢ per Mcf for deliveries of "distress or emergency gas" prior to November 1, 1954, and for a price of 16.0¢ per Mcf, plus applicable tax reimbursement,[1] for the five-year period beginning November 1, 1954. On September 7, 1954, Forest was granted temporary authorization to make the proposed sale at 8.797150¢ per Mcf.[2]

---

[1] Pursuant to Subparagraph (2) of Article X of the subject contract, the appropriate tax reimbursement payable to Forest has fluctuated from time time. At present Forest is reimbursed 1..5¢ per Mcf of the 2.3¢ per Mcf Louisiana severance tax.

[2] A permanent certificate was issued to Forest on September 21, 1956, in Docket No. G–2593. Prior to the submittal of its Offer, Forest filed on March 20, 1962, an application in Docket No. CI62–1102 for authority to abandon the sale certificated in Docket No. G–2593, which relates to Forest's FPC Gas Rate Schedule No. 1. In its application Forest states that production from the single well involved has ceased and the well has been plugged and abandoned.

On November 4, 1954, Forest tendered for filing Supplement No. 1 to its FPC Gas Rate Schedule No. 1, providing for the increased rate of 16.0¢ per Mcf, plus tax reimbursement. By order issued December 7, 1954, in Docket No. G–5510, the Commission suspended and deferred the use of said Supplement No. 1 until February 1, 1955, at which time it became effective subject to refund. After a full hearing, the increased rate was disallowed,[3] but by court order [4] issued February 20, 1959, the case was remanded to the Commission for presentation of further evidence. On remand, hearings were concluded on May 3, 1960, and briefs filed, but the Examiner's decision has not been issued.

In its Offer of Settlement Forest proposes a settlement rate of 15.5¢ per Mcf, plus applicable tax reimbursement, with refunds to be made of all amounts collected in excess of the settlement rate plus interest at the rate of 6% per annum. The Offer is conditioned upon the Commission (1) discharging Forest from any liability for refunds other than those provided for in the Offer, (2) terminating the proceeding in Docket No. G–5510, and (3) granting Forest's application in Docket No. CI62–1102 for authorization to abandon the sale previously certificated in Docket No. G–2593.

In support of its Offer, Forest states that the 8.797150¢ per Mcf rate was an interim, distress rate agreed upon by Forest in order to make an emergency sale. The emergency was occasioned by pressures encountered during drilling which created the danger of a blowout. Forest states that the 16.0¢ per Mcf, plus tax reimbursement, rate was actually the initial rate, and was not an increased rate, and that the Commission should treat the proposed settlement rate as an initial rate which is compatible with the initial rate ceiling set forth in the Commission's Statement of General Policy No. 61–1, as amended.

Transco has concurred in the Offer of Settlement, and no objections to the proposed settlement have been received from intervenors or other interested parties.

Upon review of these facts, we conclude that the 8.797150¢ per Mcf sale was a distress sale and that the proposed settlement rate of 15.5¢ per Mcf, plus applicable tax reimbursement, while in excess of our increased rate ceiling, is less than the initial rate ceiling and is therefore appropriate.

Forest proposes that, as a condition of the Offer, the Commission grant Forest's application in Docket No. CI62–1102 for authorization to abandon the sale previously certificated in Docket No. G–2593. Since Section 7(b) of the Natural Gas Act requires that a hearing be held to determine whether an application for abandonment should be approved, we cannot dispose of the application by this settlement. However, we shall promptly set the certificate matter for hearing.

The Commission finds:

(1) The proposed settlement of the proceeding in Docket No. G–5510, on the basis described herein, as more fully set forth in the Offer of Settlement filed by Forest on August 30, 1962, is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act and should be conditionally approved and made effective subject to the terms and conditions ordered herein.

(2) Good cause exists for terminating the proceeding in Docket No. G–5510 and providing for refunds.

The Commission orders:

(A) The Offer of Settlement filed herein by Forest on August 30, 1962 is hereby conditionally approved and made effective as of the date of the issuance of this order, subject to the following terms and conditions.

[3] Forest Oil Corporation, Docket No. G–5510, order issued April 26, 1957, 17 FPC 617.
[4] *Forest Oil Corporation, et al.* v. *F.P.C.*, 263 F. 2d 622 (CA5, 1959).

(B) Within 30 days from the date of issuance of this order, Forest shall refund to Transco the difference between the amounts collected, subject to refund, and the settlement rate, together with simple interest of 6% per annum, from the respective dates of receipt of the excess amounts by Forest to the date of refund. Forest shall bear all costs incidental to the making of such refunds.

(C) Within 30 days from the date of issuance of this order, Forest shall report to the Commission the details of its calculations resulting in refunds ordered pursuant to paragraph (B) above, together with a copy of a release from Transco with respect to such refunds.

(D) Forest shall, over the signature of a responsible officer, file with the Commission within 15 days from the date of issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order.

(E) Upon full compliance by Forest with all the terms and conditions of this order, the proceeding in Docket No. G–5510 shall be deemed to be terminated.

(F) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceedings which are presently being heard, or in any proceedings now pending or hereinafter instituted by or against Forest, including any finding or determination that may be made with respect to the Forest application in Docket No. CI62–1102 for authorization to abandon the sale previously certificated in Docket No. G–2503.

Commissioner Morgan *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

HUMBLE GAS TRANSMISSION COMPANY, DOCKET NO. CP63–56

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 29, 1963)

On September 7, 1962, as supplemented on October 11, 1962, Humble Gas Transmission Company (Applicant) filed in Docket No. CP63–56 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 8.7 miles of 16-inch pipeline in St. Mary and St. Martin Parishes, Louisiana, and to transport and deliver a maximum of 150,000 Mcf of natural gas per day for Humble Oil & Refining Company (Humble Oil) to the terminus of Southern Natural Gas Company's (Southern) main transmission line in the Duck Lake Field, St. Martin Parish, all as more fully set forth in the application, as supplemented.

The gas to be transported by Applicant will be delivered to it by Humble Oil at the site of the latter's Garden City plant, St. Mary Parish. Applicant states that of the total volumes to be transported, 112,500 Mcf of natural gas per day will be used to meet maximum delivery obligations to Southern for the account of Sinclair Oil & Gas Company (Sinclair) under sales by Sinclair to Southern. The remaining 37,500 Mcf per day will be transported for use in Humble Oil's pressure maintenance program in the Duck Lake Field.

The proposed transportation service will be rendered pursuant to an agreement, dated August 14, 1962, between Applicant and Humble Oil. Applicant will receive from Humble Oil a monthly payment of $13,840 for the subject service.

The estimated cost of the proposed facilities is $857,100, which cost will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 15, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protect to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Humble Gas Transmission Company, a Delaware corporation having its principal place of business in New Orleans, Louisiana, upon completion of construction of the facilities and the commencement of operation thereof for which authorization is requested herein, will be engaged in the transportation of natural gas in interstate commerce and will be, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Humble Gas Transmission Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

MIKE LITTLE GAS COMPANY, INC., DOCKET NO. CP63-79

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued January 28, 1963)

On September 24, 1962, Mike Little Gas Company, Inc. (Applicant) filed in Docket No. CP63-79 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Kentucky West Virginia Gas Company (Kentucky West Virginia) to establish a new physical connection of its pipeline facilities with the proposed facilities of Applicant, in place of the presently existing connection, and to sell additional natural gas to Applicant for resale in the community of Weeksbury, Floyd County, Kentucky, all as more fully set forth in the application.

Applicant presently renders natural gas service in the communities of Melvin, Bypro, Burton and environs, Floyd County, Kentucky.

The additional facilities required for the proposed operation are:

(1) Approximately 15,000 feet of 3-inch pipeline to extend Applicant's present gas distribution system to Weeksbury.

(2) Approximately 12,000 feet of 4-inch pipeline to effect a new physical connection with Kentucky West Virginia's system, all in Floyd County, Kentucky.

The total estimated cost of Applicant's proposed facilities is $28,850.

Applicant's estimated total peak day and annual requirements are:

Year	Peak day	Annual
	Mcf	*Mcf*
1963	455	46,500
1964	510	53,000
1965	550	57,000

On October 11, 1962, Kentucky West Virginia filed an answer to the subject application stating that it has no objection to serving Applicant, as requested.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on December 13, 1962 (27 F.R. 12385). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Kentucky West Virginia Gas Company, a West Virginia corporation having its principal place of business in Ashland, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 4, 1944, in Docket No. G-272 (4 FPC 476).

(2) Applicant, Mike Little Gas Company, Inc., is a public utility duly organized and existing under the laws of the Commonwealth of Kentucky and authorized to engage in the business of distributing and selling natural gas within Kentucky.

(3) It is necessary and desirable in the public interest that Kentucky West Virginia be directed to establish a new physical connection of its natural gas transportation system with the proposed facilities of Applicant, in place of

the presently existing connection, and to sell natural gas to Applicant as requested in the application in this proceeding, as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Kentucky West Virginia for the community of Weeksbury within one year from the date of issuance of this order.

(5) The requirement that Kentucky West Virginia serve Applicant, as proposed, will not place any undue burden upon Kentucky West Virginia nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Kentucky West Virginia Gas Company be and it is hereby directed to establish a new physical connection of its natural gas transportation system with the proposed facilities of Applicant, in place of the presently existing connection, and to sell natural gas to Applicant as hereinbefore described and as set forth in the application in this proceeding.

(B) Applicant shall be prepared to receive natural gas from Kentucky West Virginia for the community of Weeksbury within one year from the date of issuance of this order.

(C) Kentucky West Virginia shall report to the Commission in writing the date of commencement of service to Applicant.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-43

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 29, 1963)

On August 15, 1962, Northern Natural Gas Company (Applicant) filed in Docket No. CP63-43 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally co-extensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $3,000,000, and no single project will exceed a cost of $500,000. The proposed facilities will be financed from funds on hand and funds generated through operations.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 15, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Northern Natural Gas Company to construct during the calendar year 1963 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Northern Natural Gas Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general

terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58 (c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing on the date on which this order issues, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP62-31

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 29, 1963)

On August 10, 1961, as supplemented on August 28, 1962, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP62-31 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of natural gas to North Penn Gas Company (North Penn) and United Natural Gas Company (United), all as more fully set forth in the application as supplemented.

Applicant seeks authorization to sell and deliver under its Rate Schedule ACQ-3 an annual contract quantity of 1,803,673 Mcf of gas to North Penn on a long term basis commencing in 1963 and a contract quantity of 3,577,381 Mcf of gas to United for the year 1963 only. North Penn requires that its service from Applicant commence in the latter part of 1963, making the volume for 1963 only 300,612 Mcf of gas.

North Penn and United require the additional gas service to meet the requirements of the residential, commercial, industrial, and public authority customers which they serve directly and indirectly.

Applicant requires no facilities in addition to those presently certificated in order to render the proposed service except for a pipeline with two meter stations connecting Applicant's Leidy line with the facilities of the purchasers in the vicinity of Wharton, Potter County, Pennsylvania. This pipeline and appurtenances are pending certification in Docket No. CP61-284.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 17, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application have been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(2) The sale and delivery of natural gas hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, will be made in interstate commerce subject to the jurisdiction of the Commission, and said sale and delivery are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The sale and delivery of natural gas proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), and (e) of Section 157.20 of such Regulations.

(6) The certificate hereinafter issued should be conditioned upon the issuance and acceptance of the certificate authorization in Docket No. CP61–284.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to sell and deliver natural gas as hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), and (e) of Section 157.20 of such Regulations.

(C) The certificate issued by paragraph (A) above is conditioned upon the issuance and acceptance of the certificate authorization requested in Docket No. CP61–284.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

UNITED FUEL GAS COMPANY, DOCKET NO. G–13372

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 29, 1963)

On July 27, 1962, United Fuel Gas Company (Applicant) filed an application to amend the Commission's order in Docket No. G–13372 issued September 9, 1958, 20 FPC 347, wherein Applicant was authorized, among other things, to

abandon and sell to Cabot Corporation (successor to Godfrey L. Cabot, Inc.) (Cabot) Applicant's natural gas Storage Pool X–1 and certain pipeline transmission facilities in Putnam County, West Virginia, all as more fully set forth in the application to amend.

Applicant was authorized by said order to transfer to Cabot the subject property and facilities during a period of time ending on May 1, 1962, and, during the interim period, the subject property and facilities were to be operated jointly by Applicant and Cabot pursuant to an agreement, dated May 31, 1957. Applicant proposes, in the instant application to amend, to continue the joint operation under an agreement between Applicant and Cabot, dated April 19, 1962, which provides substantially for a continuation of the interim operating arrangement. The primary term of the April 19, 1962, agreement is three years from May 1, 1962, and from year to year thereafter.

The application shows that on June 26, 1962, Storage Pool X–1 and related facilities were conveyed and assigned by Applicant to Cabot. The lease agreement of April 19, 1962, provides for the leasing to and operation by Applicant of some 3.5 miles of 10-inch pipeline extending from Applicant's Lanham compressor station to an interconnection with a 10-inch line conveyed to Cabot by Applicant and a 10-inch line owned by Applicant. Applicant will operate the leased lines pursuant to the arrangements set forth in the agreement of April 19, 1962; the excess capacity in said lines will be used by Applicant for its own purposes as it has heretofore been doing under the original operating agreement of May 31, 1957.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on November 24, 1962 (27 F.R. 11572). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued September 9, 1958, in Docket No. G–13372 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued September 9, 1958, in Docket No. G–13372 be and the same is hereby amended by authorizing Applicant to operate the subject facilities as hereinbefore described, as more fully set forth in the subject application to amend and the agreement, dated April 19, 1962, between Applicant and Cabot.

(B) In all other respects said order shall remain in full force and effect.

(C) Applicant shall make an appropriate rate filing consistent with the authorization granted in paragraph (A) above.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

WESTERN NATURAL GAS COMPANY, DOCKET NOS. G–14737, G–18889, AND RI61–49

ORDER ACCEPTING OFFER OF SETTLEMENT, PRESCRIBING REFUNDS AND TERMINATING PROCEEDINGS

(Issued January 29, 1963)

On February 24, 1958, Western Natural Gas Company (Western Natural) tendered for filing a notice of change in its presently effective FPC Gas Rate

Schedule No. 20 for the jurisdictional sale of natural gas to Texas Eastern Transmission Corporation (Texas Eastern) from the Jenny Bell Field, DeWitt County, Texas (Railroad Commission District No. 2). By order issued March 26, 1958, in Docket No. G–14737, the proposed increased rate of 13.8733¢ per Mcf, designated as supplement No. 6 to Western Natural's FPC Gas Rate Schedule No. 20, was suspended until August 27, 1958, when, upon proper motion, it became effective subject to refund.

On June 15, 1959, Western Natural tendered for filing notices of change in its presently effective FPC Gas Rate Schedule Nos. 21 and 22 for the jurisdictional sales of natural gas to Texas Eastern from the West George West Field, and Karon Slick Unit, respectively, Live Oak County, Texas (Railroad Commission District No. 2). By order issued July 13, 1959, in Docket No. G–18889, the proposed increased rates of 13.8733¢ per Mcf [1] designated as Supplement Nos. 4 and 3 to Western Natural's FPC Gas Rate Schedule Nos. 21 and 22, respectively, were suspended until December 16, 1959, when, upon proper motion, they became effective subject to refund.

On July 28, 1960, Western Natural tendered for filing notices of change in its FPC Gas Rate Schedule Nos. 20, 21, and 22. By order issued August 23, 1960, the proposed increased rate of 14.9444¢ per Mcf,[1] designated as Supplement Nos. 7, 5, and 4, to its FPC Gas Rate Schedule Nos. 20, 21, and 22, respectively, were suspended until January 28, 1961, when, upon proper motion, they became effective subject to refund in Docket No. RI61–49.

On December 5, 1962, Western Natural submitted, in accordance with the provisions of Section 1.18(e) of the Commission's Rules of Practice and Procedure, an Offer of Settlement of the suspension proceedings in Docket Nos. G–14737, G–18889, and RI61–49. In the Offer of Settlement, Wsetern Natural proposes to withdraw the rate filings in Docket No. RI61–49, and to establish settlement rates under its FPC Gas Rate Schedule Nos. 20, 21, and 22, of 13.8733¢ per Mcf.[1] Under the terms of the offer, the favored-nation and price redetermination provisions are to be eliminated from the rate schedules involved, and a schedule of 0.5¢ per Mcf periodic escalations at five-year intervals beginning February 5, 1963, is to be substituted therefor. The provisions in the contracts for reimbursement of seven-eights of any increases in taxes occurring after June 1, 1959, are to remain unchanged.

In support of its offer, Western Natural cites the deletion of the favored-nation and price redetermination provisions from the gas purchase contracts with Texas Eastern, and states that such provisions were important elements of consideration required by Western Natural under the contracts for the long-term commitment of its gas reserves to the performance of the contracts. Texas Eastern has concurred in the offer and has agreed to execute the contract amendments provided for therein. No objections to the offer have been received.

Since the proposed settlement rates, inclusive of present tax reimbursement, are acceptable under the provisions of the Second Amendment [2] to the Commission's Statement of General Policy No. 61–1,[3] for jurisdictional sale of natural gas in Texas Railroad Commission District No. 2, it is believed that the public interest will best be served by accepting Western Natural's proposed settlement as hereinafter set forth.

We desire to make it clear the acceptance of this Offer of Settlement shall not be construed as approval of any future increased rate proposed by Western Natural under the periodic escalation provisions or otherwise.

---

[1] Under Rate Schedule No. 21 there is an additional 0.5¢ per Mcf charge for dehydration.
[2] Issued December 20, 1960, 24 FPC 1107.
[3] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

The Commission finds:

The proposed settlement of the proceedings in Docket Nos. G–14737, G–18889, and RI61–49, on the basis described herein, as more fully set forth in the Offer of Settlement filed with the Commission on December 5, 1962, is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act, and should be approved as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Western Natural with the Commission on December 5, 1962, is hereby approved in accordance with the provisions of this order.

(B) Western Natural shall file within 30 days from the date of issuance of this order contractual amendments to its FPC Gas Rate Schedule Nos. 20, 21, and 22, which Western Natural shall execute with Texas Eastern in conformity with Western Natural's Offer of Settlement in all respects. The contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Within 45 days from the date of issuance of this order, Western Natural shall refund to Texas Eastern all amounts collected from Texas Eastern in excess of the rates specified in the Offer of Settlement, together with simple interest at the rate of 7 percent per annum from the date of receipt of the excess amounts to the date of refund. Western Natural shall bear all costs incidental to the making of the refunds.

(D) Within 60 days from the date of issuance of this order, Western Natural shall report to the Commission in writing the details of its calculations resulting in refunds ordered pursuant to paragraph (C) above, together with a copy of a release from Texas Eastern with respect to such refunds.

(E) Upon compliance by Western Natural with the terms of this order, the rate and charge of 13.8733¢ per Mcf, including present tax reimbursement, under its FPC Gas Rate Schedule Nos. 20 and 22, and the rate and charge of 14.3733¢ per Mcf, including present tax reimbursement, and including a 0.5¢ per Mcf dehydration charge under its FPC Gas Rate Schedule No. 21, shall be effective as of the date of issuance of this order, Western Natural's refund obligations in these proceedings shall be deemed discharged and the proceedings in Docket Nos. G–14737, G–18889, and RI61–49 shall be deemed terminated.

(F) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceedings which are pending or which may be instituted by or against Western Natural.

Commissioner Morgan *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

AMERADA PETROLEUM CORPORATION, ET AL., DOCKET NO. CI62–1544, ET AL.

ORDER DENYING APPLICATION FOR RECONSIDERATION AND REHEARING

(Issued January 30, 1963)

On December 31, 1962, Texaco Inc. (Texaco) pursuant to Section 1.34 of the Commission's Rules of Practice and Procedure, filed an application for rehearing and reconsideration of the Commission's denial of Texaco's request for the production of documents and application for subpoena *duces tecum* and *ad testificandum*.

On November 23, 1962, Texaco filed an extensive motion for the production of all books, papers, press releases, correspondence, memoranda, reports, records, analyses, computations, charts, graphs, schedules, summaries, projections, and writings of any kind whatsoever utilized by the Commission in determining the initial service rate for Texas Railroad District No. 4 as reflected in its *Statement of General Policy No. 61–1*, 24 FPC 818 (1960), and the *Fifth Amendment to the Statement of General Policy No. 61–1*, issued on August 30, 1962, 28 FPC 441. In addition Texaco applied for the issuance of a subpoena directing the Secretary of the Commission to appear before the Hearing Examiner in the instant proceeding to testify and to bring with him and produce the aforementioned papers and documents.

Texaco filed applications for certificates of public convenience and necessity in these proceedings, pursuant to Section 7 of the Natural Gas Act (Act) requesting authorization to sell gas in interstate commerce. Texaco and the other producers in this consolidated proceeding were granted the hearing required by Section 7 of the Act for the receipt of evidence leading to a determination as to whether the public convenience and necessity required the issuance of the requested certificates. Evidence upon which a determination of the issues in these cases, including the price issue, may be made accordingly was entered into the record, and the matter is now before the Hearing Examiner awaiting the filing of briefs.

Under the injunction of *CATCO* the Commission must give a most careful scrutiny and responsible reaction to the initial price proposals of producers under Section 7.[1] The Commission, of course, must weigh all factors bearing upon the public interest in determining whether a certificate should issue, and upon what terms. In each case the Commission must proceed upon the evidence before it to determine whether the applicant has supported his proposal by evidence showing the necessity thereof to the present or future public convenience and necessity before a permanent certificate may be issued.

The burden is upon the producer-applicant to prove that a certificate as requested is required by the public convenience and necessity. There is no burden upon the Commission, the Secretary of the Commission or the Commission Staff which must be borne to prove that fact. The effect of Texaco's motion is to place upon the Commission the burden of justifying a policy which it has expressed in its General Statement of Policy No. 61–1, as amended. Neither the Natural Gas Act nor the Administrative Procedure Act casts any such burden upon the Commission. A general statement of policy is a statement issued by an agency to advise the public properly of the manner in which the agency proposes to exercise a discretionary power. See Attorney General's Manual on Administrative Procedure Act, footnote 3, page 30.

While the Statement of General Policy No. 61–1, as amended, sets forth the guideline prices for all gas produced in specific areas for interstate consumption, there has been and can be no demonstration that failure of the Commission to specify and disclose the underlying information which led it to adopt specific "ceilings", or any staff memoranda upon which such determinations may have been based, has resulted or will result in Texaco's being aggrieved in these proceedings.

Our opinion in *Skelly* makes it clear that the Policy Statement sets forth only "guideline" prices at which the Commission indicated it would exercise its discretion in the absence of protest by intervening parties to certificate sales in a particular area.[2] It did not purport to fix the "in-line" price which *CATCO* and

[1] *Atlantic Refining Co.* v. *Public Service Commission of N.Y.*, 360 U.S. 378, 391.

[2] See *Skelly Oil Company, et al.*, 28 FPC 401, Opinion 362, Docket No. G–18638, *et al.*, issued on August 30, 1962.

the *UGI* cases[3] which followed it make clear are, in the absence of a compelling showing to the contrary, to be the public convenience and necessity price fixed after the statutory Section 7 hearing.

The burden of justifying the price at this hearing rests with the producer-applicant, but to the extent that contract provisions allow, this price may be higher or lower than the guideline price as the evidence demonstrates.[4]

Texaco has demonstrated no reason for justifying the production of the documents and issuance of a subpoena as requested. Accordingly it is necessary that Texaco's request be denied.

The Commission orders:

The above-noted request of Texaco Inc. for rehearing and reconsideration is hereby denied in all respects.

Commissioner Morgan *concurring*, filed a separate statement attached hereto.

Commissioner Ross *not participating.*

MORGAN, Commissioner, *concurring:*

Texaco's attempt to require us here to produce the documents we used in setting the initial price ceilings for Texas District No. 4 is patently improper, because the types of documents it asks for are privileged. I therefore concur with my colleagues in denying Texaco's motion.

But the Texaco motion involves a more disturbing question—namely, whether our "interim" price technique is either a fair or an effective means of holding the price of gas to ". . . the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest."[5] My apprehension that it is neither stems from my belief that:

(1) record evidence shows that in several areas discrepancies exist between "in-line" prices and initial ceilings;

(2) the Policy Statement[6] advances unacceptably general reasons in defense of those discrepancies; and

(3) the magnitude of the burden required to prove a discrepancy unjustified is too great.

The Policy Statement sets interim "rate standards", usually referred to as area ceilings, which determine the acceptability of producer prices. But the Policy Statement does not show that those "standards" represent "the lowest possible reasonable rate" at which gas should be sold. Thus they fall short of accomplishing the purpose and intent of the Act.[7]

On the contrary, a substantial body of evidence shows that a number of those rate standards are not "the lowest possible reasonable rate" or "in-line" price for gas. It has been demonstrated that certain "standards" were set at levels permitting the collection of rates demonstrably exceeding the "lowest possible reasonable rate" for gas. It may also be that some others were set too low, but as yet, and perhaps for reasons to be discussed, this has not been demonstrated.

[3] *United Gas Improvement Co.* v. *FPC*, 283 F2d 817 (CA 9) *certiorari* denied 365 U.S. 881; *United Gas Improvement Co.* v. *FPC*, 290 F2d 133 (CA 5) *certiorari* denied 368 U.S. 823.

[4] Our reference in *Skelly* to the fact that the producers in these proceedings would be free to show whether the in-line price at the time of their contracts was the original ceiling price established on September 28, 1960, the lower price found to be the in-line price prior to that date or the 16-cent price established in the 5th Amendment to the Statement of Policy does not mean that they are confined to any of these three separate prices if the relevant in-line price was in fact at some other level. By this language we meant only to convey the thought that at this hearing all parties would have free reign to show the proper in-line price, wherever it might happen to fall.

[5] *Atlantic Refining Co.* v. *Public Service Commission*, 360 U.S. 378 (1959).

[6] 24 FPC 818.

[7] *Atlantic Refining Co. supra*, at page 388, footnote 7.

The fundamental defect in the Policy Statement is that, although purporting to serve only as a "guide," the "considerations" it recites to support its ceilings are so broad that, even though a producer or intervenor (upon whom the Policy Statement places the burden of disproving its unexplained ceilings) were to show that a ceiling or a proposed rate is unwarranted, the Statement still permits us to justify that rate in terms of some unnamed "relevant fact."

This confuses (a) the prior duty of Government to set determinable standards, with (b) the subsequent duty of applicants to show whether they have met those standards. Such confusion is unfair and unacceptable for two reasons:

(1) absent an understandable explanation of the reasons which require a ceiling or a rate to be set at a specific level, no one can prove those reasons unreasonable or in error; and

(2) no single party can prove that the needs of an entire segment of the industry are not met or are exceeded by a rate based on unknown factors.

The Policy Statement issued by this Commission contains only a single, but many-faceted, clue for the guidance of those who wish to know by what means we have set the area rate standards or ceilings. It is contained in the following passage:

> In arriving at the price levels . . . we have considered all of the relevant facts, [including] . . . cost information from all decided and pending cases, existing and historical price structures, volumes of production, trends in production, price trends in the various areas over a number of years, trends in exploration and development, trends in demands, and the available markets for the gas.

This suggests that we used a formula of some kind, but the formula itself is not revealed; for the statement contains no hint as to the respective weights given to each of these "relevant facts" or of the way in which they may have been combined to produce final judgment.

The Policy Statement is even more deficient as a guide to those interested parties who may wish to exercise their rights to attack or disprove a rate standard or ceiling set by us or an individual rate thereunder accepted by us. In addressing itself to all such parties, be they producers, purchasers or intervenors, the Policy Statement has this to say:

> . . . we will, in determining whether the higher price is justified, not necessarily consider only the financial requirements of the individual producer proposing the price, but will consider all of the above elements relevant to the industry generally in the area concerned. Similar evidence will also be required from purchasers or their customers who object to any of the price levels or any specific price.

The "relevant" elements referred to are, of course, precisely those set forth as the asserted components of the Policy Statement's hinted-at but undisclosed formula. By this means the Commission has placed on producers, purchasers or intervenors the burden of disproving or discrediting a formula for setting rates which the Commission claims to have employed in the setting of rates, but which it has never identified, explained or demonstrated publicly.

If we are unwilling or unable to disclose our formula for the setting of rates, and perhaps even less willing or able to demonstrate the validity of such a formula, what right have we to place on others the burden of disproving it? And what possibility exists that others can do so? These are not, to me, merely rhetorical questions. They relate to basic legal and constitutional rights of the citizenry, and I am persuaded that the procedures discussed herein have done violence to those rights.

In any event, the result is that the consuming public and the producing industry alike have no assurance that the price we certificate represents "the lowest possible reasonable rate" at which gas should be sold.

Accordingly, as long as the absence of discernible criteria prevents an interested party from proving that the "considerations" we invoked are wrong, it is no answer to the problem which gives rise to the Texaco motion to say that a party may undertake in a certificate proceeding to show that our ceiling is not "the lowest possible reasonable rate" required by the Act. For the Commission, in fact remains free to apply those unexplained ceilings with inflexible rigidity, or to modify or suspend them with indiscernible arbitrariness.[4]

The most recent demonstration of this is the *Skelly* case. There, after finding that the "in-line" price was 15¢, the Commission majority ruled that certain producers should continue to charge and collect their higher contract rates, for the reason that they may have relied upon an (excessive) 18¢ ceiling when they negotiated their contracts. Further, the majority consolidated their applications in an additional hearing to give them an (additional) opportunity to "show" that their excessive rates should continue because predicated upon a ceiling already shown to have been excessive.

Elsewhere, parties time and again have introduced all kinds of evidence to show that one or more of our ceilings was not "the lowest possible reasonable rate"; and while our opinions rejecting that evidence said it did not demonstrate our ceilings or the "considerations" supporting them to be wrong, none of the opinions spelled out what those considerations were. If continued, such practices will fast convert our Policy Statement "guidelines" to irrebuttable presumptions. For as the Supreme Court explained in a similar situation, holding an agency policy statement to be a reviewable act:

> The particular label placed upon [its action] by the Commission is not necessarily conclusive, for it is the substance of what the Commission has purported to do and has done which is decisive.[5]

Here, Texaco, a producer, clearly has an interest in showing that we set the ceiling in question below "the lowest possible reasonable rate." Yet it finds itself as much in the dark concerning the "considerations" on which we based that ceiling as other parties who would like to show the exact opposite. Were it not for the embarrassing legal precedent it might create, I would willingly make available whatever documents there may be of the type Texaco describes—and for the benefit of those other parties as well as for Texaco. This, however, we cannot do.

I submit that the interim answer to the larger problem discussed here is the revision of our initial ceilings with maximum practicable dispatch. In making those revisions, I further submit that we should adopt and *demonstrably* apply the method of determining price "in-lineness" enunciated in the dissenting statement to the Fifth Amendment of our Policy Statement, issued August 30, 1962, 28 FPC 441; 442.

---

[4] The words of Justice Frankfurter are again appropriate here. "Congress," he explained in the Hope case, "has committed to the administration of the Federal Power Commission the duty of applying standards of fair dealing and of reasonableness relevant to the purposes expressed by the Natural Gas Act. * * * To what sources then are the Commission and the courts to go for ascertaining the *standards* relevant to the regulation of natural gas rates? * * * It will not do to say that it must all be left to the skill of experts. Expertise is a rational process and a rational process implies *expressed reasons* for judgment." (Emphasis supplied.) *Federal Power Commission, et al.* v. *Hope Natural Gas Co.*, 320 U.S. 591 at 626–627 (1943).

LONE STAR GAS COMPANY, DOCKET NO. CP63-64

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 30, 1963)

On September 17, 1962, Lone Star Gas Company (Applicant) filed in Docket No. CP63-64 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $1,400,000, and no single project will exceeed a cost of $350,000. The proposed facilities will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 17, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 11, 1944, in Docket No. G-442 (4 FPC 565).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said projects or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,400,000, with no single project to exceed a cost of $350,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Lone Star Gas Company to construct during the calendar year 1963, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Lone Star Gas Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $1,400,000, with no single project to exceed a cost of $350,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP63–75

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 30, 1963)

On September 24, 1962, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP63–75 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally co-extensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $3,500,000, and no single project will exceed a cost of $500,000. The proposed facilities will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 16, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation havings its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act

and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,500,000, with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Natural Gas Pipeline Company of America to construct during the calendar year 1963 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Natural Gas Pipeline Company of America.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,500,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NEW YORK STATE NATURAL GAS CORPORATION AND HOME GAS COMPANY, DOCKET NO. G–17544

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 30, 1963)

On October 18, 1962, New York State Natural Gas Corporation (New York Natural) and Home Gas Company (Home) (sometimes hereinafter referred to jointly as Applicants) filed in Docket No. G–17544 a joint application to amend the Commissions order, issued May 29, 1959, in Docket No. G–17544, 21 FPC 796, all as more fully set forth in the joint application to amend on file with the Commission.

The subject order authorized Applicants to construct, operate and acquire certain facilities and to exchange natural gas at certain interconnections only during emergencies.

Under the subject proposal, pursuant to a new and additional agreement, New York Natural will construct approximately 2.7 miles of 4-inch pipeline from certain gas wells in the Town of Van Etten, Chemung County, New York, to connect with Home's pipelines in said town and county. Home will construct a measuring station at such connection, and New York Natural will reimburse Home for the cost of such station. The proposed facilities will be used by New York Natural to deliver its Van Etten Field gas to Home, and Home will deliver corresponding volumes of gas to New York Natural at the aforementioned existing interconnections. The joint application shows that the Van Etten wells are located approximately nine miles from New York Natural's nearest pipeline, but only 2.7 miles from Home's pipelines.

The total cost of the proposed facilities is estimated to be $49,750.

Applicants seek herein to have the May 29, 1959, order amended by authorizing the proposed construction and operation of facilities and the proposed additional exchange of gas.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on December 11, 1962 (27 F.R. 12231). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order, issued May 29, 1959, in Docket No. G–17544 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued May 29, 1959, in Docket No. G–17544 be and the same is hereby amended by authorizing Applicants, New York State Natural Gas Corporation and Home Gas Company, to construct and operate the proposed facilities and to exchange and deliver natural gas, all as hereinbefore described and as set forth in the subject application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 1403

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued January 30, 1963)

Pacific Gas and Electric Company, Licensee for Project No. 1403,[1] filed statements, pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the period from November 1, 1944, through December 31, 1957, project additions and retirements resulting in (1) a $14,041.59 net increase in project cost over the previously determined amount of actual legitimate original cost of the project, $1,439,446.53 as of October 31, 1944,[2] and (2) a resulting total claimed actual legitimate original cost of the project as of December 31, 1957, of $1,453,488.12.[3] The claimed net increase of $14,041.59 results from claimed and recorded project gross additions and retirements totaling $15,119.00 and $1,077.41, respectively, and is more specifically shown in the attached schedule.

The Commission's staff made an examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the foregoing claimed amounts; and of reviewing Licensee's recorded amounts of accrued depreciation applicable to in-service project properties of the Narrows development. As the result of this examination, the staff proposes no adjustments to claimed and recorded project costs and recommends that the foregoing project costs be allowed as part of the actual legitimate original cost of Project No. 1403. The staff's studies of the project depreciation reserve are incomplete, and the staff therefore makes no recommendations with respect to that matter.

The California Public Utilities Commission was advised by letter of this Commission dated May 1, 1962, of Licensee's claimed and recorded project costs and the staff's recommendation with respect thereto. By letter of May 10, 1962, that Commission indicated no objection to the foregoing.

The Commission finds:

(1) The staff's recommendation herein respecting Licensee's claimed and recorded project costs and the California Public Utilities Commission's letter of May 10, 1962, obviate the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The net increase or change in the actual legitimate original cost of Project No. 1403 (Narrows) from November 1, 1944, through December 31, 1957, is $14,041.59 and the resulting actual legitimate original cost of the project as of December 31, 1957, is $1,453,488.12, all classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of the Federal Power Act as shown in the attached Schedule.

---

[1] The project is located on the Yuba River in Nevada County, California, and may be described generally as the Narrows development or plant. The license (issued pursuant to Section 4(e) of the Federal Power Act), authorizing the construction, operation, and maintenance of the project, is by its terms effective for a period of 50 years commencing August 1, 1941.

[2] See Commission order issued December 3, 1957 (18 FPC 745).

[3] Article 18 of the license provides for Commission determination of the actual legitimate original cost of the project and of any additions thereto or betterments thereof.

(3) It is necessary and appropriate for the purposes of the Federal Power Act that determination of the accrued depreciation applicable to in-service project properties of Project No. 1403, as of December 31, 1957, be reserved for future Commission consideration and decision as hereinafter ordered.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project accounts, showing the debit amount of $14,041.59 as the net change in the actual legitimate original cost of Project No. 1403 during the period from November 1, 1944, through December 31, 1957, and the total debit balance of $1,453,488.12 as the actual legitimate original cost of the project as of December 31, 1957, all classified by the prescribed accounts as shown in the attached schedule.

(C) The matter of Commission determination of the amount of the reserve for depreciation applicable to in-service project properties of Project No. 1403 as of December 31, 1957, is hereby reserved for future Commission consideration and decision.

SCHEDULE.—PACIFIC GAS AND ELECTRIC COMPANY

[Actual legitimate original cost]

Account [1] No.	Title	Total allowed cost as of Oct. 31, 1944 [2]	Changes from Nov. 1, 1944, to Dec. 31, 1957, as claimed and as allowed	Total allowed cost as of Dec. 31, 1957

RIO GRANDE ELECTRIC COOPERATIVE, INC., BISHOP LYLE BAILEY, DOCKET NO. E-6788; BISHOP LYLE BAILEY, DOCKET NO. E-6789

ORDER TERMINATING AUTHORIZATION TO TRANSMIT ELECTRIC ENERGY TO MEXICO AND REVOKING PERMIT TO CONSTRUCT FACILITIES AT THE INTERNATIONAL BORDER

(Issued January 30, 1963)

The Commission, by order issued June 27, 1958, in Docket No. E-6788 (19 FPC 1124), authorized Bishop Lyle Bailey (Bailey) and Rio Grande Electric Cooperative, Inc. (Cooperative), pursuant to Section 202(e) of the Federal Power Act, to transmit electric energy from the United States to Mexico in an amount not in excess of 200,000 kwh per year at a rate of transmission not to exceed 30 kva. That order showed that Bailey would be the transmitter and Cooperative would be the supplier of such exported energy, which would be transmitteed from a point on the north side of the Rio Grande in the Big Bend National Park in Brewster County, Texas, across the international border to Boquillas, Coahuila, Mexico, for use in connection with Bailey's fluorspar operations. Concurrently with the issuance of its June 27, 1958, order, the Commission released to Bailey a Permit signed by the Chairman of the Commission on May 9, 1958, Docket No. E-6789, authorizing Bailey, pursuant to Executive Order No. 10485, dated September 3, 1953, to construct, operate, maintain and connect certain electric facilities at the international border between the United States and Mexico for such exportation of electric energy from the United States.

Bailey, by letter dated June 15, 1962, advised the Commission that he has not been able to obtain permission from the Mexican Government to transmit electric energy into Mexico for his fluorspar operations and requested the Commission to cancel the aforementioned export authorization. Information on file with the Commission indicates that the facilities authorized by the Permit referred to above have not been constructed.

The Commission finds:

It is necessary and appropriate for the purposes of the Federal Power Act and Executive Order No. 10485, that the above-mentioned authorization to export electric energy be terminated, and that the above-mentioned Permit signed by the Chairman of the Federal Power Commission on May 9, 1958, be revoked, all as hereinafter ordered.

The Commission orders:

The authorization heretofore granted to Bailey and Cooperative to transmit electric energy from the United States to Mexico and the Permit heretofore granted to Bailey to construct and maintain facilities at the international border, United States and Mexico, all as referred to above, are hereby terminated and revoked.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

SOUTHERN CALIFORNIA EDISON COMPANY, PROJECT NO. 2175

ORDER AMENDING LICENSE (MAJOR)

(Issued January 30, 1963)

Application was filed on November 6, 1962, by Southern California Edison Company, licensee for major Project No. 2175, for amendment of license with

respect to lands of the United States occupied by the project, located on Big Creek, tributary to the San Joaquin River, in Fresno, Tulare, and Kern Counties, California, and affecting navigable waters and lands within Sierra National Forest and other lands of the United States.

The license was issued on March 27, 1959, 21 FPC 419, effective as of March 1, 1959.

A staff re-examination of the lands of the United States occupied by the project transmission and telephone lines reveals that the length of the 100-foot wide right-of-way on lands of the United States occupied by the project transmission and telephone lines is less than that upon which the annual charge specified in subparagraph (iii) of Article 32 of the license is based. The re-examination shows that the said lines occupy the equivalent of a 100-foot wide right-of-way on lands of the United States 37.14 miles in length. Consequently, subparagraph (iii) of Article 32 of the license should be amended as requested in the above-mentioned application for amendment.

The Commission finds:

(1) The lincense, amended as hereinafter ordered is not inconsistent with the public interest.

(2) The decreased amount of annual charges for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands for transmission line right-of-way is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) Subparagraph (iii) of Article 32 of the license for Project No. 2175 is hereby amended, effective as of March 1, 1959, to read as follows:

(iii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands for transmission line right-of-way, $297.12.

(B) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgement of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP63–85

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 30, 1963)

On October 8, 1962, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP63–85 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally co-extensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $2,500,000 and no single project will exceed a cost of $500,000. The proposed facilities will be financed from general funds or revolving credit.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 15, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,500,000 with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Tennessee Gas Transmission Company to construct during the calendar year 1963 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Tennessee Gas Transmission Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-58

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 30, 1963)

On September 7, 1962, as supplemented on September 18, 1962, United Gas Pipe Line Company (Applicant) filed in Docket No. CP63-58 and application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $1,500,000 and no single project will exceed a cost of $375,000. The proposed facilities will be financed from current working funds.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 17, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder by conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the calender year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,500,000, with no single project to exceed a cost of $375,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing United Gas Pipe Line Company to construct during the calendar year 1963, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to United Gas Pipe Line Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $1,500,000, with no single project to exceed a cost of $375,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP63-94

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 31, 1963)

On October 15, 1962, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP63-94 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally co-extensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $3,247,850, and no single project will exceed a cost of $500,000. The proposed facilities will be financed from funds on hand, cash generated by operations, and internal sources.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 17, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,247,850, with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Arkansas

Louisiana Gas Company to construct during the calendar year 1963 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Arkansas Louisiana Gas Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,247,850, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr, Charles R. Ross, and Harold C. Woodward.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP63-95

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 31, 1963)

On October 15, 1962, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP63-95 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience an necessity authorizing the construction during the calendar year 1963 and the operation of unspecified natural gas facilities to enable Applicant to make new industrial sales of natural gas from its main pipeline system, all as more fully set forth in the application.

The purpose of this "budget-type" application is to enable Applicant to act with reasonable dispatch in establishing new delivery points without the delay incident to the filing and processing of individual certificate applications for each new delivery point.

Applicant estimates the total annual gas requirements of the new direct industrial customers to be served through the subject facilities to be approximately 10,000,000 Mcf.

The total cost of the proposed facilities will not exceed a maximum of $800,000, and no single project will exceed a cost of $200,000.

Deliveries of interstate gas will not be made into the pipeline operated by Arkansas Industrial Pipeline Corporation which extends from a point near Perla, Arkansas, to a point near Helena, Arkansas under the authorization herein requested.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 17, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to establish new delivery points to enable Applicant to make new industrial sales of natural gas from its main pipeline system as proposed are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization hereinafter granted, a statement showing: (a) the location of each project constructed pursuant to the authorization hereinafter granted, (b) a description of each project, (c) the name of each customer served, (d) the actual final cost of the facilities in each project, (e) the use to which the gas is put by each customer, and (f) the estimated annual volume to be delivered to each customer and the average rate per Mcf to be charged therefor.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $800,000, with no single project to exceed a cost of $200,000.

(8) Deliveries through the facilities hereinafter authorized should not exceed 10,000,000 Mcf per year, and no deliveries of interstate gas should be made through the facilities hereinafter authorized into the pipeline operated by Arkansas Industrial Pipeline Corporation.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Arkansas Louisiana Gas Company to construct during the calendar year 1963 the facilities hereinbefore described, all as more fully described in the application in this proceeding, and to operate such facilities only to establish new delivery points to enable Applicant to make new industrial sales.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit within 60 days after the expiration of the authorization hereinafter granted, a statement showing: (a) the location of each project constructed pursuant to the authorization hereinafter granted, (b) a description of each project, (c) the name of each customer served, (d) the actual final cost of the facilities in each project, (e) the use to which the gas is put by each customer, and (f) the estimated annual volume to be delivered to each customer and the average rate per Mcf to be charged therefor.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to $800,000, with no single project to exceed a cost of $200,000.

(E) Deliveries through the facilities authorized in paragraph (A) above shall not exceed 10,000,000 Mcf per year, and no deliveries of interstate gas shall be made through the facilities hereinbefore authorized into the pipeline operated by Arkansas Industrial Pipeline Corporation.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

CITY AND COUNTY OF DENVER, COLORADO, PROJECT NO. 2204

ORDER ISSUING LICENSE (MAJOR)

(Issued January 31, 1963)

Application was filed on May 11, 1956, and supplemented on May 21, October 4, 5 and 29, 1956, January 18, May 31, and June 28, 1957, and April 27, 1962, by City and County of Denver (Applicant)—acting by, through and for the use of its Board of Water Commissioners—of Denver, Colorado, for a license under the Federal Power Act (Act) for certain project works, constructed and to be constructed, designated as major Project No. 2204, located on the Williams River (also known as Williams Fork River), a tributary of the Colorado River, in the region of the Villages of Hot Sulphur Springs and Parshall, in Grand County, Colorado, and affecting lands of the United States.

The original dam and water supply reservoir on Williams Fork River were completed and put into use during 1941, as primarily a municipal water supply system, under a permit issued by the Bureau of Land Management of the Department of the Interior.[1] In its application, Applicant seeks a license to authorize

[1] Section 6 of the Boulder Canyon Project Act (45 Stat. 1057) as amended March 1, 1929, by Pub. Res. No. 98 (45 Stat. 1446), withdrew the Commission's licensing authority over the Colorado River and its tributaries, except the Gila River and its tributaries, but such authority was restored when said Act became effective (46 Stat. 3000).

the then existing project works, and future enlargement of the existing dam and installation of a 3,000 kilowatt generating unit in the reservoir on Williams Fork River. By letter dated December 27, 1956, the Commission advised Applicant that it would interpose no objection to its proposal to award contracts for electrical equipment and to proceed with construction at the Applicant's risk. It appears that the project was completed and placed in operation by Applicant on July 25, 1959.

The Secretary of the Army and Chief of Engineers have reported on the application and offered no objection thereto. Although the Secretary of the Interior was invited to report on the application, no such report has been received to date.

The Department of Game and Fish, State of Colorado, reported on the application and recommended certain conditions in the interests of fish and wildlife resources, for inclusion in any license issued for the project.

While permitted to intervene in this proceeding by Commission order issued December 5, 1956, and having filed a subsequent complaint with respect to operation of the project, Middle Park Conservancy District has advised by letter dated January 21, 1960 that the matters complained of do not presently occur.

The Commission finds:

(1) The project affects lands of the United States.

(2) Applicant is a municipal corporation organized under the laws of the State of Colorado and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(3) The project consists of:

(a) All lands constituting the project area and enclosed by the project boundary, or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: Sheet 52–1 (FPC No. 2204–16) Location Map.

Exhibit K: Sheet 52–59 (FPC No. 2204–17) Map of Project Area; Sheet 52–60 (FPC No. 2204–18) Map of Project Area; Sheet 52–61 (FPC No. 2204–19) Lower Access Road; Sheet 52–62 (FPC No. 2204–20) 69 KV Transmission Line; Sheet 53–3 (FPC No. 2204–21) 69 KV Transmission Line—Plan and Profile Sta. 0+88 to Sta. 51+00; Sheet 53–4 (FPC No. 2204–22) 69 KV Transmission Line—Plan and Profile Sta. 49+00 to Sta. 94+50.

(b) All project works consisting of: A concrete arch dam (an enlargement of an existing dam), having a gated spillway on the left bank and creating a reservoir with capacity of 93,637 acre-feet at maximum water surface elevation of 7,800 feet; a low earth dike; a powerhouse at the downstream toe of the dam containing a single turbine rated at 4,250 horsepower and connected to a 3000 kilowatt generator operating under a gross head of about 193 feet; step-up substation adjacent to the powerhouse; a 69 KV transmission line about 2 miles long connecting the powerhouse to the United States Government's 69 KV transmission line near Parshall, Colorado; and other appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheet 52–8 (FPC No. 2204–23) General Plan and Section; Sheet 52–9 (FPC No. 2204–24) Elevation and Sections; Sheet 52–10 (FPC No. 2204–25) Layout of Arch Dam; Sheet 52–18 (FPC No. 2204–26) Spillway, General Plans and Sections; Sheet 52–29 (FPC No. 2204–27) Outlet Works Alterations, Access Bridge to Power Plant, Valve Installation; Sheet 52–36 (FPC No. 2204–28) General Arrangement, Architectural Elevations and Details; Sheet 52–38 (FPC No. 2204–29) General Arrangement, Floor Plans; Sheet 52–39 (FPC No. 2204–30) General Arrangement, Transverse Section; Sheet 52–40 (FPC No. 2204–31) General Arrangement Longitudinal Sections; Sheet 52–47 (FPC No. 2204–32) West Dike, Plan-Profile-Sections.

Exhibit M: Two typewritten sheets entitled, "Exhibit M" giving a general description of the turbine, governor, generator, switching arrangement and transmission line.

(c) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(4) Public notice of the filing of the application was given as required by the Act. Except as recited above, no protests have been received. No conflicting application is before the Commission.

(5) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(6) The issuance of a license as hereinafter provided will not interfere or be inconsistent with any reservation or withdrawal of public lands.

(7) The project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, under the terms and conditions hereinafter imposed.

(8) The step-up substation adjacent to the powerhouse and the 69 kv transmission line mentioned in finding (3)(b) above are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(9) The installed horsepower capacity of the project hereinafter authorized for the purpose of completing the capacity component of the administrative annual charges is 4,000 horsepower.

(10) The amount of annual charges to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act, and for recompensing it of the use, occupancy and enjoyment of its lands, including transmission line right-of-way, is reasonable as hereinafter fixed and specified.

(11) The exhibits designated and described in finding (3) above conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to the City and County of Denver (Licensee) under Section 4(e) of the Federal Power Act for a period of 50 years, effective as of January 1, 1957, for the construction, operation, and maintenance of

Project No. 2204, upon the Williams Fork River and affecting lands of the United States, subject to the terms and conditions of the Federal Power Act, which is incorporated by reference as part of this license, subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act, and subject to the provisions of the Colorado River Compact.

(B) This license is also subject to the terms and conditions set forth in Form L–2, December 15, 1953, entitled "Terms and Conditions of License for Unconstructed Major Project Affecting Lands of the United States" (17 FPC 62) which terms and conditions are attached hereto and made a part hereof, except for Articles 17, 20 and 21 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 25. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such fishways including fish traps, or ther fish handling facilities or fish protective devices and supporting facilities for artificial propagation and comply with such reasonable modifications of the project structures, and operation in the interest of fish life as may be prescribed hereafter by the Federal Power Commission upon its own motion or upon the recommendations of the Secretary of the Interior, or the Colorado Department of Fish and Game, after notice and opportunity for hearing and upon a finding based on substantial evidence that modifications are necessary and desirable, and consistent with the provisions of the Act.

Article 26. Whenever the United States shall desire, in connection with the project, to construct fish handling facilities or to improve the existing fish handling facilities at its expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such fish handling facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall modify the project operation as may be prescribed by the Commission, consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish handling facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish handling facilities or to relieve the Licensee of any obligation on the United States to construct or improve fish handling facilities or to relieve the Licensee of any obligation under this license.

Article 27. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically with such other power systems and in such manner as the Commission may direct in the interests of power and other beneficial public uses of water resources, the benefits of which shall be shared equitably by the participants in such coordination.

Article 28. The Licensee shall install additional capacity and make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 29. The Licensee shall pay to the United States the following annual charges:

(1) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations as in effect from time

to time. The authorized installed capacity for such purposes is 4,000 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands exclusive of those used for transmission line right-of-way purposes $890.40; and

(iii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands for transmission line right-of-way purposes only, $6.01.

Article 30. The Licensee shall so far as is consistent with proper operation of the project, allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health and property, and Provided further, that the Licensee's consent to the construction of access roads, wharves landings and other facilities shall not without its express agreement place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that Licensee may construct and maintain as required by the license.

Article 31. The Licensee shall within one year from the date of issuance of this license file with the Commission a recreational use plan for the project which shall include not only recreational improvements which may be provided by others, but the recreational improvements the Licensee plans to provide.

(C) The exhibits designated and described in finding (3) above are hereby approved as part of this license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NOS. G–4769, G–12948, G–17929, AND RP60–3

ORDER DENYING APPLICATION FOR REHEARING

(Issued January 31, 1963)

On January 2, 1963, El Paso Natural Gas Company (El Paso), petitioned for rehearing of the Secretary's letter of December 7, 1962, rejecting certain proposed tariff sheets tendered for filing December 3, 1962, and for rehearing of the Commission's telegram of December 17, 1962. El Paso further petitioned for rehearing of the letter of December 12, 1962, to the extent said letter constitutes, augments or embodies an order of the Commission.[1]

[1] Within the same pleading El Paso petitioned for rehearing of the order denying rehearing issued December 7, 1962. By letter from the Secretary dated January 11, 1963, that part of the pleading containing the petition was rejected.

The letter of December 7, 1962, rejected the tendered materials as they did not comply with the provisions of Commission Opinion No. 366, issued October 19, 1962, 28 FPC 688, as clarified by our order issued December 7, 1962, 28 FPC 952.[2] These tendered materials were based on exhibits and testimony offered as evidence by El Paso which were stricken from the record by the Examiner on objection of the Commission staff.

The letter of December 12, 1962 from the General Counsel was in reply to a telegram of December 10, 1962, addressed to him from El Paso inquiring as to the intent of the Commission's order of December 7, 1962. The General Counsel stated that it was his opinion that any use of the material appearing on transcript page 6093 reflecting a summary of Exhibit 131 which had been excluded from the record in these proceedings would be inappropriate and contrary to the intent of the orders in these proceedings. The Commission's telegram of December 17, 1962, stated that the procedure outlined in the General Counsel's letter of December 12, 1962 represented the determination of the Commission.

In support of its motion, El Paso only repeats its contention that the Commission erred by refusing to allow El Paso, for the purposes of computing rates, to employ the cost of service presented in these proceedings most favorable to it. In particular, El Paso points to testimony on transcript pages 6091–6093 relating to Exhibit 131 which was stricken by the Examiner, and upon appeal by El Paso was upheld by this Commission.

The arguments by El Paso are a reiteration of arguments made to this Commission and to the Fifth Circuit Court of Appeals by El Paso in its effort to obtain a stay of Opinion No. 366. El Paso has set forth no facts or principles of law which we have not fully considered before in these proceedings or which upon present consideration warrant any change or modification of our determinations in these matters. Accordingly, we find that El Paso's application for rehearing should be denied.

The Commission orders:

The application for rehearing filed by El Paso on January 2, 1963, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62–65

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued January 31, 1963)

On September 14, 1961, El Paso Natural Gas Company (Applicant) filed in Docket No. CP62–65, an application pursuant to Section 7(b) of the Natural Gas Act, for authority to abandon certain facilities consisting of approximately 256 feet of 4½ inch O.D. pipeline, dehydrator and appurtenances located in Section 30, Township 1 North, Range 101 West, Rio Blanco County, Colorado.

The Applicant states that the facilities described were used to transport natural gas produced from the Phillips-Kadane-Morgan Government No. 1 Well by seven parties named in the application and sold to Applicant. The well became

[2] This clarification stated that there may be an inadvertent ambiguity in ordering paragraph (A) of Opinion 366, that the substitute filings and supporting data were to be computed on the basis of evidence offered and received in evidence and not to evidence rejected by the examiner when the rejection was upheld by the Commission.

incapable of producing gas and was plugged and abandoned thus rendering the facilities connected with it useless and not required by public convenience and necessity.

The dehydrator first above mentioned is to be removed and salvaged.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 15, 1963 respecting the matters involved in and the issues presented by the application. No petition to intervene or protest to the granting of the application has been received. Staff Counsel, moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision herein pursuant to Section 1.30(c) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company within the meaning of the Natural Gas Act, as stated by Applicant in paragraph (II) of its application.

(2) The facilities proposed to be abandoned, as herein before described were authorized by the Commission in its order of July 23, 1959, in Docket No. G–13456 to be constructed and used by Pacific Northwest Pipeline Corporation, applicant's predecessor in interest.

(3) The available supply of natural gas from the well served by the facilities has become depleted to a degree that further operation of them is unwarranted and abondonment thereof should be permitted and approved.

(4) A request during the public hearing by Staff Counsel for omission of the intermediate decision procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record, and not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the said rules.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon the facilities as heretofore described, as more fully described in the application.

(B) Applicant shall advise the Commission as to the date of abandonment of the facilities within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

JOSEPH FRANCIS JANKE, JR. AND EARLE V. AUSMAN, PROJECT NO. 2314

ORDER DISMISSING APPLICATION FOR PRELIMINARY PERMIT

(Issued January 31, 1963)

Application was filed on May 2, 1962, by Joseph Francis Janke, Jr. and Earle V. Ausman (Applicants), Box 3274, Anchorage, Alaska, for a preliminary permit under Section 4(f) of the Federal Power Act for proposed Project No. 2314 to be located on the South Fork of Eagle River, Third Judicial Division, Alaska, approximately 8.5 miles northeast of Anchorage, and affecting lands of the United States.

According to the application, the proposed project would be a 130-kilowatt development which would be used to furnish power for homes in the area. On September 7, 1962, Congress approved Public Law 87–647 which amended the Federal Power Act by raising the installed horsepower capacity of a minor project from 100 horsepower to a maximum of 2,000 horsepower.

No construction is authorized under a preliminary permit. A preliminary permit gives the permittee, during the period of the permit, the right of priority of application for license while the permittee undertakes the necessary studies and examinations required by Section 9(b) of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit. The problems covered by the provisions relating to preliminary permits are not present in connection with a minor project such as that proposed here. Under the Commission's rules and regulations in such cases, an applicant may proceed directly to file an application for a license which, if granted, will authorize construction.

While the application states that no lands of the United States would be occupied by the proposed project—proposed to be located in the SW¼SW¼, E½SW¼, section 21, and the W½W½, section 28, T. 14 N., R. 1 W., Seward Meridian—our records show that title to land in Applicant Janke's homestead entry (Anchorage 055015), located in the W½W½, section 28, remains in the United States, and would include 1.5 acres to be used for the project reservoir.

The Commission finds:

(1) Proposed Project No. 2314 would affect lands of the United States.

(2) A preliminary permit for proposed Project No. 2314 is not necessary or appropriate.

The Commission orders:

The aforesaid application for preliminary permit for proposed Project No. 2314 is hereby dismissed without prejudice to Applicants filing an application for license for a minor project.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Harold C. Woodward.

PORTLAND GENERAL ELECTRIC COMPANY, PROJECT NO. 2030

ORDER FURTHER EXTENDING TIME FOR FILING REVISED PROJECT EXHIBITS

(Issued January 31, 1963)

On August 20, 1962, Portland General Electric Company, licensee for major Project No. 2030, filed an application for a further extension of time within which to file revised Exhibits F and K for the Round Butte Development of the project, including the 230-kv transmission line. Extension is requested to within one year from the date of completion of the Round Butte Development, which date is specified in Article 29 of the license as September 1, 1965.

Article 31 of the license, as amended, provides that the licensee shall file revised Exhibits F and K for the Round Butte Development, other than the 230-kv transmission line, by September 1, 1962.

According to the application for further extension, it may require several months before all lands and rights-of-way are acquired since condemnation proceedings may be necessary in some instances; additional aerial photography is necessary; and the Forest Service has requested that certain proposed recreation areas be shown on the revised Exhibit K drawings.

Article 40 of the license requires the licensee to submit Exhibits F and K for the 230-kv transmission line extending from the Round Butte Development to Bethel Substation near Salem, Oregon, and provides that the licensee shall not

commence construction of that line until Commission approval of the exhibits. Pursuant to the article, supplemental Exhibit K maps showing the probable route of the line were filed and subsequently approved by Commission order issued December 1, 1961. This order authorized the route of the line insofar as it would effect National Forest and Indian lands, and the final routing of the line will be shown as provided in the following revised Article 31. The terms of Article 40 having been satisfied, the said article should be eliminated from the license as hereinafter provided.

The Commission finds:

A further extension of time as hereinafter provided is not inconsistent with the public interest.

The Commission orders:

(A) Article 31 of the license for Project No. 2030 is hereby further revised to read as follows:

Article 31. The licensee shall submit for Commission approval within one year from the date of completion of the Round Butte Development revised Exhibits F and K for the Round Butte Development, including the 230-kv transmission line, in accordance with the Commission's rules and regulations.

(B) Article 40 of the license for the project is hereby eliminated therefrom.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP63-86

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued January 31, 1963)

On October 8, 1962, Tennessee Gas Transmission Company (Applicant) filed in Docket No. CP63-86 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963 and the operation of an unspecified number of metering and regulating stations and appurtenant facilities to enable Applicant to establish new and additional delivery points for the sale of natural gas to existing customers, at a total cost not to exceed a maximum of $200,000, with no single project to exceed a cost of $50,000, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in establishing new delivery points for existing customers for the delivery of authorized contract volumes of gas without the delay incident to the filing and processing of individual certificate applications.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 16, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to establish new delivery points for existing customers for the delivery of authorized contract volumes of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) a description of said project or projects, (b) location of said project or projects, (c) actual final costs, (d) name of customers served, (e) estimated annual and peak day deliveries, and (f) use to which the gas is to be put.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, the total expenditures for facilities to be constructed should be limited to a maximum of $200,000, with no single project to exceed a cost of $50,000, and deliveries through said facilities should be made only to existing customers within certificated delivery authorizations, providing that such customers have the necessary local and state authorizations.

(8) A request by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Under the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Tennessee Gas Transmission Company to construct during the calendar year 1963 the facilities hereinafter described, all as more fully described in the application in this proceeding, and to operate such facilities only to serve existing customers within certificated delivery authorizations, providing that such customers have the necessary local and state authorizations.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit within 60 days after the expiration of authorization hereinafter granted, a statement showing by projects: (a) a description of said project or projects, (b) location of said project or projects, (c) actual final costs, (d) name of customers served, (e) estimated annual and peak day deliveries, and (f) use to which the gas is to be put.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $200,000, with no single project to exceed a cost of $50,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CITY OF WRANGELL, ALASKA, PROJECT NO. 2313

ORDER ISSUING PRELIMINARY PERMIT

(Issued January 31, 1963)

Application was filed May 14, 1962, by the City of Wrangell, Alaska (Applicant) for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for proposed Project No. 2313 to be located on Mill Creek, the outlet for Virginia Lake, a coastal stream discharging directly into Eastern Passage, in the First Judicial Division, State of Alaska, seven air miles east of Wrangell, and affecting lands of the United States within the Tongass National Forest.

As described in the application, the proposed project, to be known as the Virginia Lake Hydroelectric Project, would consist of: a dam 600 feet long across Mill Creek, about 900 feet downstream from the outlet of Virginia Lake, having a crest elevation at 145 feet and raising the lake elevation to 140 feet and providing 40,000 acre-feet of usable power storage; a fixed spillway; intake structure; 1,700-foot conduit to surge tank; 500-foot penstock to powerhouse containing a 4,000 horsepower turbine connected to a 3,000 kva generator; 1.25 miles of access road; 2 miles of submarine cable under Eastern Passage; 5 miles of conventional transmission line to City of Wrangell; and all other necessary appurtenances.

According to the application, the Virginia Lake Hydroelectric Project would replace Applicant's existing 880 kw diesel plant which will be retained as standby capacity. Energy from the project would be used and sold by Applicant for general utility purposes within the City of Wrangell and in the adjacent vicinity.

The Secretary of the Army and the Chief of Engineers have reported that the proposed project would not affect adversely navigation or flood control conditions in the area involved and no objections were offered to the issuance of a preliminary permit for the project.

The Department of the Interior has recommended a special condition in the interest of fish and wildlife for inclusion in any preliminary permit for the project.

The Department of Agriculture has reported it has no objection to the issuance of a preliminary permit for the project subject to the terms and conditions hereinafter imposed.

The Commission finds:

(1) Applicant is a municipal corporation organized under the laws of the State of Alaska.

(2) Public notice of the application has been given as required by the Act. No protests have been received. No conflicting application is before the Commission.

(3) The proposed project will affect lands of the United States, but will not affect any Government dam, and no reason is apparent at this time for development of the proposed project by the United States.

The Commission orders:

(A) This preliminary permit is hereby issued to the City of Wrangell, Alaska, for a period of 24 months, effective as of January 1, 1963, for the sole purpose of maintaining priority of application for license for Project No. 2313, to be located on Virginia Lake and Mill Creek, First Judicial Division Alaska, and affecting lands of the United States within the Tongass National Forest, subject to the terms and conditions of the Act, which is incorporated by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) This permit is also subject to the terms and conditions set forth in Form P–1 entitled "Terms and Conditions of Preliminary Permit" (16 F.P.C. 1303–1305), which terms and conditions (designated as Articles 1 through 8) are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each six month period, from the effective date of the preliminary permit, to the Regional Engineer, Federal Power Commission, San Francisco, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period, and of the work contemplated under the preliminary permit for the ensuing period.

Article 10. The Permittee shall during the period of project planning cooperate with the U.S. Fish and Wildlife Service and the Alaska Department of Fish and Game, for the purpose of planning and designing adequate conservation measures: (1) to prevent loss of or damage to existing fish and wildlife resources, and (2) to develop and improve those resources where practicable.

Article 11. The Permittee shall, prior to undertaking any investigation work under this preliminary permit on National Forest lands, consult with the Regional Forester, United States Forest Service, Juneau, Alaska, or his representative, as to reasonable requirements relative to operations, field surveys, and explorations, and shall abide by such requirements; and shall cooperate with the United States Forest Service during the period of this permit to develop a plan for alleviation of damage to, and achieving maximum ultilization of, National Forest resources insofar as affected by the proposed project.

Article 12. The Permittee shall for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgment of the acceptance of this preliminary permit, it shall be signed for the Permittee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

AMERADA PETROLEUM CORPORATION, DOCKET NO. G-9385, ET AL.[1]

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT PROPOSAL, SEVERING AND TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued February 1, 1963)

There is now before us for consideration a Settlement Agreement filed on October 30, 1962, by Amerada Petroleum Corporation (Amerada), and two of the parties to these proceedings: The United Gas Improvement Company and Public Service Electric and Gas Company, encompassing the rates for 46 of Amerada's 82 currently effective gas rate schedules.[2] On November 5, 1962, the Long Island Lighting Company (Long Island) and on November 20, 1962, the Philadelphia Electric Company (Philadelphia Electric) filed comments on said Settlement Agreement. Long Island stated that the Settlement Agreement appeared to be deficient in regard to the agreed upon rate for one rate schedule (Rate Schedule No. 65) and the proposed disposition of three temporary certificates covering sales made under Rate Schedule Nos. 90, 91 and 96. However, Long Island stated that: "notwithstanding the foregoing comments, Long Island does not oppose approval of the Settlement Agreement." Philadelphia Electric's response was in the main directed to the same "deficiencies" commented upon by Long Island, although Philadelphia Electric did comment adversely on certain other provisions of the Settlement Agreement. Accordingly Philadelphia Electric, as it has done in respect to other settlement agreements, stated that it could not agree to the instant Settlement Agreement.

On November 29, 1962, the Public Service Commission of the State of New York (PSC) filed its response to the Settlement Agreement wherein it stated that it was in substantial agreement with the responses of Long Island and Philadelphia Electric.

The rate which was agreed to under Rate Schedule No. 65, which covers a sale by Amerada to United Gas Pipe Line Company (United Gas) in the South Elton Field in Southern Louisiana, upon which comment was made, is the one exception to this Commission's applicable area ceilings of all of the rates proposed to be charged by Amerada for sales of natural gas in interstate commerce encompassed in the Settlement Agreement. Initially, Amerada entered into a contract with United Gas for the sale of gas from South Elton at a price of 7¢ per Mcf, exclusive of tax, for a term of two years, and on a month to month basis thereafter. The sale was made on a short-term basis because Amerada had been advised by another prospective purchaser that when the necessary facilities were installed it would purchase the gas from Amerada at a price of 18¼¢ per Mcf. When the prospective purchaser installed the facilities, it entered into a contract for the purchase of gas at 18¼¢ from another producer at South Elton which had also been selling to United Gas under a contract similar to that of Amerada. However, when Amerada sought permission from this Commission to terminate

[1] The additional dockets involved herein are set forth in Appendix A hereto.

[2] Excluded from the Settlement Agreement are 25 sales of natural gas made by Amerada in the Permian Basin, two sales made in South Louisiana (consolidated with *Coastal Transmission Company, et al.*, Docket No. G-18338, *et al.*) and any sales where deliveries had not commenced before July 1, 1962.

sales to United Gas so as to sell gas to the other purchaser in the area it was not granted. Thereafter, Amerada and United Gas entered into renegotiation conferences wherein Amerada agreed to commit additional gas reserves to United Gas in the South Lewisburg Field and a new contract for the South Elton sales was agreed upon. The price agreed upon in the second contract was 18.5¢ per Mcf, exclusive of tax. Upon consideration all of the circumstances set forth above, and others set forth with particularity in the Settlement Agreement, we find them to be very similar to others where we have in particular instances regarded the second contract to be in the nature of an initial sales contract, *Tidewater Oil Company, et al.*, Docket No. G–13310, *et al.*, 27 FPC 1267 (Order issued June 15, 1962); *Cities Service Company, et al.*, Docket No. G–8921, *et al.*, 28 FPC 1108 (Order issued December 26, 1962) and orders cited therein. Therefore, we find the settlement rate of 18¢ per Mcf, including tax reimbursement, which is substantially below our ceiling for initial rates in South Louisiana to be proper and approve the same.

In regard to Rate Schedule Nos. 90, 91 and 96 (Docket Nos. CI61–727, CI62–525 and CI62–216 respectively) for which issuance of related permanent certificates is pending, and service is being rendered under temporary authorizations, such certificate applications have been, by order issued December 31, 1962, consolidated with the proceedings in *Union Texas Petrolcum, et al.*, Docket No. G–13221, *et al.* In said consolidated proceeding we propose to determine the proper initial prices for the sales of gas in interstate commerce from the South Louisiana area for the sales involved therein. We shall approve the present settlement proposal conditioned on Amerada's agreement to reduce its rates under its Rate Schedule Nos. 90, 91 and 96 on the effective date of this order to the level proposed in the settlement agreement, and its further agreement that the rates under such rate schedules shall be subject to final determination in the Union Texas proceeding. If by final order in the Union Texas proceeding a lower rate is established than that set forth in the settlement agreement Amerada shall make further refunds from the date of this order of the difference between the settlement rate and the rate ordered in the *Union Texas* proceeding. The refund requirements imposed as a condition of this settlement order shall not be construed to affect or limit the positions of the parties in the *Union Texas* proceeding with respect to refund obligations under temporary authorizations.

The Settlement Agreement also includes other rates (Rate Schedule Nos. 64, 88, 93 and 99, Docket Nos. G–14116, CI60–688, CI61–1289 and CI62–1107 respectively) for which issuance of related permanent certificates is pending, and service is being rendered under temporary authorizations. Additionally, Docket Nos. G–14116 and CI60–688 have been consolidated in the Union Texas consolidated proceedings. We propose, therefore, to sever such proceedings from the proceedings in *Union Texas, supra*, and to set such proceedings along with those in Docket Nos. CI61–1289 and CI62–1107 for abridged hearing in accordance with Section 7 of the Natural Gas Act indicating that the proposed initial price is the settlement price.

In summary, the settlement proposal otherwise provides:

(1) Amerada waives the right to file for contractually authorized increased rates until November 1, 1964, except as provided in paragraph 5 below, and excepting further that with respect to Rate Schedule Nos. 65 and 88 there is a moratorium on all increased rate filings until July 1, 1967:

(2) Amendment of Amerada's Rate Schedule Nos. 46, 53 and 81 to eliminate any favored nation, price redetermination or periodic price escalation clauses contained therein:

(3) Refunds, with interest at the applicable rate, under all rate schedules where collection were made subject to refund, the difference between the revenues actually received and those which would have been received at the proposed settlement rate, in each instance, commencing with July 1, 1960, to the date of the issuance of this order.

(4) Extension of the make-up clauses in the take-or-pay provisions contained in Rate Schedules Nos. 64 and 65 from two to five years;

(5) Retention by Amerada of the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels determined through area hearings or by amendment of the Commission's Statement of General Policy No. 61–1, except as to Rate Schedule Nos. 46, 53 and 81, and to reflect increases in taxes where contractually authorized, except as to Rate Schedule Nos. 65 and 88.

With respect to refunds, the July 1, 1960 commencement date is based upon Amerada's revenue-cost relationship for recent years as found by the parties to the Settlement Agreement utilizing cost-of-service studies. Such studies revealed that during 1960, increased sales and higher initial rates started to equalize Amerada's revenue-cost relationship, and that about mid-year its jurisdictional revenues began to exceed its jurisdictional costs. In view of that, and all the terms of the Settlement Agreement, it is appropriate that refunds should be computed for sales made on and after July 1, 1960 to and including the date of issuance of this order, as provided in the Settlement Agreement.

In view of our action regarding Rate Schedule Nos. 90, 91 and 96, set forth above, we believe that the comments filed by Long Island, Philadelphia Electric and PSC have been duly recognized, and that the instant Settlement Proposal as herein modified, and in other particulars not specifically noted herein, meets the criteria previously set forth in other of our recent settlement orders,[3] and accordingly we find it to be in the public interest and should be approved as hereinafter provided.

On April 9, 1962, a decision was issued by the presiding examiner in Docket No. G–9385 *et al.*, regarding Amerada's rates for sales of natural gas in interstate commerce. Without passing on the validity of the decision, we find that the public interest will best be served by approving the settlement agreement as herein modified. The examiner's decision accordingly becomes moot.

Our action herein should not be construed, nor may it be, as constituting approval of any future rate increase, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate proceedings, involving Amerada's rates and rate schedules.

The Commission finds:

(1) The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the Settlement Agreement filed on October

---

[3] See *Cities Service Company, et al.*, Docket No. G–8921, *et al.*, 28 FPC 1108, order issued December 26, 1962, and the orders cited therein.

30, 1962, as herein modified, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that it be conditionally approved and conditionally made effective subject to the modifications hereinafter ordered.

(2) Good cause exists for approving the settlement rates, for severing and terminating certain proceedings, for severing certain other proceedings, and providing for refunds.

The Commission orders:

(A) The settlement of these proceedings on the basis of the Settlement Agreement, filed October 30, 1962, as herein modified, is approved and made effective subject to the following terms and conditions.

(B) The applicable settlement rates set out in Appendix A hereto are approved and shall be effective as of the date of issuance of this order.

(C) The pending certificate proceedings indicated in Appendix A hereto shall not be terminated on the basis of the approval of the Settlement Agreement, but shall be determined after hearing in accordance with Section 7 of the Natural Gas Act.

(D) Amerada shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order, including specifically the requirement for possible future refunds under its FPC Gas Rate Schedule Nos. 90, 91 and 96.

(E) Within 90 days from the date of this order, Amerada shall make such filings under its rate schedules as are required to make effective the terms of the Settlement Agreement, as modified herein.

(F) Within 90 days from the date of this order, Amerada shall (1) refund, with interest as specified in each docket computed to the date of actual refund, the difference between the rates collected subject to refund on and after July 1, 1960 and the related settlement rates to the date of this order; and (2) report to the Commission, in writing, the amount of refunds made to each of its purchasers, showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from its purchasers showing receipt of the refunds in conformity with the Settlement Agreement as modified and approved herein.

(G) Docket Nos. G–17538, G–17539, RI60–18, RI62–222, RI62–282, RI62–288 and RI62–289 are hereby severed from the consolidated proceedings in Docket No. AR61–2, *et al.*

(H) Docket Nos. G–14116 and CI60–688 are hereby severed from the consolidated proceedings in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*

(I) Upon full compliance by Amerada with all the terms and provisions of this order the Section 4(e) proceedings listed in Appendix A hereof and the Section 5(a) proceeding in Docket No. G–18634 shall terminate.

(J) This order is without prejudice to any findings or orders which have been, or may be, made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Amerada, the Commission staff, or any affected party hereto, in any proceedings now pending, or hereafter instituted by or against Amerada, or any other companies, person or parties affected by this order.

Commissioner Morgan *not participating.*

[1] Unless otherwise indicated, all rates are expressed in cents per Mcf at a pressure base of 14.65 psia, except in Louisiana, Colorado and New Mexico, where the pressure base is 15.025 psia. All rates include tax reimbursement.

[2] The Commission's order of June 8, 1962, granted Amerada's application for abandonment, cancelled its certificate and terminated this rate schedule.

[3] Gas from a portion of the acreage included in this rate schedule is being sold under temporary authority.

[4] Temporary certificate amendment filed Dec. 5, 1960.

[5] Temporary certificate.

[6] Pressure base is 16.4 psia.

[7] Temporary certificate.

[8] Pressure base is 14.73 psia.

The general rate investigation instituted against Amerada on June 2 1959, was assigned Docket No. G-18634.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP61-284; UNITED NATURAL GAS COMPANY, DOCKET NO. CP61-284; NORTH PENN GAS COMPANY, DOCKET NO. CP61-284; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, CP61-292; TEXAS EASTERN TRANSMISSION CORPORATION, CP62-214; NEW YORK STATE NATURAL GAS CORPORATION, CP62-250; NEW YORK STATE NATURAL GAS CORPORATION, CP62-275; TENNESSEE GAS TRANSMISSION COMPANY, CP62-275; UNITED NATURAL GAS COMPANY, CP62-275; THE SYLVANIA CORPORATION, CP62-276

ORDER AMENDING FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued February 1, 1963)

On January 18, 1963, 29 FPC 119, the Commission issued its order in the consolidated proceeding as captioned above.

It appears that the commodity rate for natural gas applicable to sales by Tennessee Gas Transmission Company under its Rate Schedule CD-4 quoted in parentheses in the third full paragraph on page 5 of said order did not take cognizance of the recent settlement which reduced said price from the 29.1¢ per Mcf there quoted to the present agreed price of 28.8¢ per Mcf.

It further appears that finding paragraph (8) on page 7 and ordering paragraph (A) on page 9 of said order inadvertently omitted the names of Tennessee Gas Transmission Company (Tennessee) and United Natural Gas Company (United) who were joint Applicants with New York State Natural Gas Corporation (New York Natural) in Docket No. CP62-275.

Also, finding paragraph (9) and ordering paragraph (A) of said order should have included specific reference to the sales of natural gas and the storage services for which authorization was requested by certain of the Applicants.

The Commission finds:

It is appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order of the Commission issued on January 18, 1963, in Docket No. CP61-284, *et al.* be amended as hereinafter ordered.

The Commission orders:

(A) The price of "29.1¢ per Mcf" quoted in parentheses in Line 4 of the third full paragraph on page 5 of the Commission's order issued on January 18, 1963, in Docket No. CP61-284, *et al.* be and the same is hereby changed to read "28.8¢ per Mcf."

(B) Finding paragraph (8) on page 7 of the aforesaid order be and the same is hereby amended to read as follows (italics in the following three paragraphs indicates additions and appropriate slight word changes in the original paragraphs):

(8) The facilities to be constructed and operated by Transco, United and North Penn in Docket No. CP61–284; by Transco in Docket No. CP61–292; by Texas Eastern in Docket No. CP62–214; by New York Natural in Docket No. CP62–250; to be constructed, operated *or* acquired by New York Natural, *Tennessee and United* in Docket No. CP62–275; and to be relocated by Sylvania in Docket No. CP62–276, all as hereinbefore described and as more fully described in the respective applications herein, as supplemented and amended, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of the existing pipeline systems and operations of the respective Applicants, *and the sales and storage services to be rendered by the aforesaid Applicants in the aforesaid Dockets respectively, are proposed to be made in interstate commerce, subject to the jurisdiction of the Commission*, and *such* construction, operation, acquisition, relocation, *sales and storage services*, respectively, by Applicants, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(C) Finding paragraph (9) on page 8 of the aforesaid order be and the same is hereby amended to read as follows:

(9) The construction, operation, acquisition and relocation of the proposed facilities, *and the sales and storage services to be rendered*, respectively, by Applicants are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(D) Ordering paragraph (A) on page 9 of the aforesaid order be and the same is hereby amended to read as follows:

(A) Certificates of public convenience and necessity be and the same are hereby issued *to* Transco, United and North Penn in Docket No. CP61–284, *to* Transco in Docket No. CP61–292, *to* Texas Eastern in Docket No. CP62–214, *to* New York Natural in Docket No. CP62–250, *to* New York Natural, *Tennessee and United* in Docket No. CP62–275, and *to* Sylvania in Docket No. CP62–276, respectively, *authorizing the construction, operations, acquisitions, relocation, sales and storage services*, all as hereinbefore described and as more fully described in the respective applications, as supplemented and amended, for the transportation and sale of natural gas in interstate commerce as therein set forth, upon the terms and conditions of this order.

(E) In all other respects, the aforesaid order of the Commission issued on January 18, 1963, in Docket No. CP61–284, *et al.* shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

YUCCA PETROLEUM CO., DOCKET NO. RI63–251

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued February 1, 1963)

Yucca Petroleum Co. (Yucca) on January 4, 1963 filed a motion for reconsideration of the Commission's order issued December 19, 1962 [in Shell Oil Co.

(Operator), *et al.*, Docket No. RI63–235, *et al.*] in the above-entitled proceeding wherein Supplement No. 5 to Yucca's FPC Gas Rate Schedule No. 5 was suspended until May 27, 1963 and until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

In its motion Yucca requests that the suspension period for its proposed rate be limited to one day. In support thereof, Yucca states that as a contractual matter the rate increase was to become effective December 10, 1961 and that another producer selling gas pursuant to the same contract has been collecting the same increase in rate, subject to refund, under another rate schedule since May 1, 1962.

In our view, a lesser suspension period than the five month suspension period permitted under Section 4(e) of the Natural Gas Act should not be authorized except in those instances when strong equitable considerations dictate that a shortened suspension period is warranted. Such considerations are not involved here. The mere fact that Yucca under its contract could have filed for the subject rate increase at an earlier date, but failed to do so, does not warrant a shortening of the suspension period herein. Nor does the fact that another producer selling gas pursuant to the same contract took the necessary steps to place the same rate increase in effect subject to refund at an earlier date provide sufficient justification for a shortened suspension period.

The Commission finds:

For the reasons set forth above, Yucca's motion for reconsideration should be denied.

The Commission orders:

Yucca's motion for reconsideration filed on January 4, 1963, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MILLS BENNETT ESTATE, ET AL., DOCKET NO. RI63–308, ET AL.*

ORDER PROVIDING FOR HEARINGS ON AND SUSPENSION OF PROPOSED CHANGES IN RATES [1]

(Issued February 4, 1963)

The above-named Respondents have tendered for filing proposed changes in presently effective rate schedules for sales of natural gas subject to the jurisdiction of the Commission. All of the sales are made at a pressure base of 14.65 psia. The proposed changes, which constitute increased rates and charges, are designated as follows:

---

[1] This order does not provide for the consolidation for hearing or disposition of the several matters covered herein, nor should it be so construed.

[1] The stated effective date is the effective date proposed by Respondent.
[2] Periodic rate increase.
[3] Subject to downward Btu adjustment below 1,000 Btu's.
[4] Subject to 1.0¢ per Mcf compression charge if buyer compresses gas.
[5] Includes 0.5¢ per Mcf for dehydration of gas.
[6] Pertains to sales of gas from all but M.E. Cooley Lease and A. Coutret Lease.
[7] Subject to compression charge of 0.5¢ per Mcf deducted by Unit Operator to Seller.
[8] Involved in succession proceedings (predecessor is Henrietta Yerger Jones).
[9] The stated effective date is the first day after expiration of the required statutory notice.

The proposed increased rates and charges exceed the applicable area price levels set forth in the Commission's Statement of General Policy No. 61–1, as amended [18 CFR, Chapter I, Part 2, Section 2.56].

The proposed changed rates and charges may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon hearings concerning the lawfulness of the several proposed changes and that the above-designated supplements be suspended and the use thereof deferred as hereinafter ordered.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act [18 CFR, Chapter I], public hearings shall be held upon dates to be fixed by notices from the Secretary concerning the lawfulness of the several proposed changed rates and charges contained in the above-designated supplements.

(B) Pending hearings and decisions thereon, the above-designated rate supplements are hereby suspended and the use thereof deferred until the date indicated in the above "Date Suspended Until" column, and thereafter until such further time as they are made effective in the manner prescribed by the Natural Gas Act.

(C) Neither the supplements hereby suspended, nor the rate schedules sought to be altered thereby, shall be changed until these proceedings have been disposed of or until the periods of suspension have expired, unless otherwise ordered by the Commission.

(D) Notices of intervention or petitioins to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Rules of Practice and Procedure [18 CFR 1.8 and 1.37(f)] on or before March 18, 1963.

Commissioner O'Connor *dissenting*, filed a separate statement appended hereto.

Commissioner Woodward *dissenting*, joins in and adopts the statement of Commissioner O'Connor.

O'Connor, *Commissioner*, dissenting:

These matters involve rate increase filings by several producing companies pursuant to their contracts with the pipelines to which they sell. In December 1960 the Commission determined in the Second Amendment of the Commission's Statement of General Policy No. 61–1 that the area ceiling for increased rates in these areas would be 14.6 cents, provided that indefinite price escalation provisions were eliminated from the contracts and that fixed price escalations would be limited to one cent per Mcf at five year intervals beginning no earlier than February 5, 1963. These producing companies amended their contracts to conform with this Policy Statement, and their increased rate filings at or below the ceiling price were approved by the Commission. They are now filing for a one-half cent increase to which they are entitled under their amended contracts, which are in conformity with the Policy Statement.

The question before the Commission is whether to suspend these increases and, if so, for what period. The Commission approved the 14.6 price on condition that such contracts be limited in further price increases as noted. However, it did not give advance approval of the further price increases but specifically stated that it was reserving judgment thereon. Therefore, I do not believe that the increases proposed in these cases can be automatically effectuated on the

grounds that the justness and reasonableness thereof was established in prior determinations.

Thus, the increases should be suspended and placed in effect subject to refund pending a determination of justness and reasonableness. The question before the Commission is whether to suspend the increases for the full five-month period and then permit them to go into effect subject to refund, or to suspend merely for one day. Both methods protect the consumer by guaranteeing a full refund with interest of any amounts collected in excess of a just and reasonable price. Under the latter, the producer can begin immediately to collect the increased price subject to refund. Under the former, the producer is permanently deprived of the revenues from this increase for a five-month period even though the entire increase may later be determined to be just and reasonable.

The primary purpose of the five-month suspension period is to postpone the effectiveness of legally questionable rate increases for a short period of time in which the Commission can resolve the question. While this permanently deprives the producer of five months' revenues to which he may prove he is entitled in the subsequent hearing, it does so for the valid purpose of immediately resolving the question. The producer loses revenues for five months, but by means of an early determination he avoids the continuing uncertainty on his books of an increasing potential refund obligation. In this case, however, there is no suggestion that the proposed increase will be set down for immediate hearing and resolved within the five-month period. Thus the primary rationalization for five months' suspension is unavailable.

Our power to suspend increases for five months also permits the Commission to postpone an increase merely for the sake of postponement where no immediate resolution of the issue is possible. I believe five months' suspension in such a case can only be justified where the proposed increase is not merely questionable but is *prima facie unreasonable*, and thereby provides an independent reason for the permanent five-month deprivation of revenues.

The increases here are within the bounds of those contractual provisions envisioned by our amended policy statement. While that statement did not prejudge the reasonableness of future increases, it did anticipate a zone of reasonableness by specifying not only the timing but also the amount of increases which were tolerable. I would conclude, therefore, that these proposed increases are not prima facie unreasonable but are within the zone of reasonableness outlined by the Commission. For this reason, I believe they should be suspended for one day only and then placed in effect subject to refund pending the ultimate determination of their justness and reasonableness. This course fully protects the consumer and avoids permanent deprivation of revenues from the producer without sufficient cause.

WOODWARD, *Commissioner:* I join in and adopt the dissenting opinion of Commissioner O'Connor filed herein.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

AMERADA PETROLEUM CORPORATION, ET AL., DOCKET NO. CI62-1544, ET AL.

ORDER DENYING MOTION TO IMPOSE PRICE CONDITIONS IN TEMPORARY CERTIFICATES

(Issued February 5, 1963)

On November 29, 1962, the Long Island Lighting Company, Philadelphia Electric Company and The United Gas Improvement Company (Movants) filed a

motion requesting that the Commission vacate the temporary certificates issued to the various party-applicants to the above-entitled proceeding or, in the alternative, impose a condition in each of these temporaries, requiring that the applicant refund to the purchaser, with interest at 7% per annum, any amounts hereafter collected which may be determined to be in excess of the price required by the public convenience and necessity under each applicant's respective certificate docket.

Each of the producers herein except Sun Oil Company in Docket No. CI62–276 have been granted temporary authority to make sales in interstate commerce. In almost every instance the authority was granted without condition as to refund to a price below that at which the sale would be initiated. The initial price would, however, continue to be collected until a prospective price could be determined after hearing upon the applications. Sales of gas were commenced by each of the producers pursuant to and in reliance upon the temporary authority.

Essentially the motion constitutes an application for rehearing of the Commission's Letter Orders issuing temporary authorizations to certain of the producers herein. Section 19(a) of the Natural Gas Act provides that an application for rehearing must be submitted within 30 days following the issuance of an order. The motion herein was not submitted within the statutory 30-day period following the issuance of the temporary authorizations. There is no question that such temporary authorizations constitute appealable orders and, therefore rehearing should be sought within 30 days. However, we recognize that the letter orders issuing the authorizations were unreported, although copies thereof, were available to the public. We shall not, therefore, dismiss the motion as being untimely. However, for the reasons hereinafter set forth, we must deny the motion to terminate the existing temporary authorizations.

Section 7(c) of the Natural Gas Act empowers the Commission to issue temporary certificates when emergency situations exist. We have promulgated regulations recognizing certain situations which constitute emergency situations as to independent producers. See regulations under the Natural Gas Act, Section 157.28.[1] Each of the producers who requested the issuance of temporary authorization to sell gas set forth an emergency situation which, under our regulations, permitted the issuance of such authority. Temporary certificates were therefore issued. Movants would now have us withdraw the existing authority and proffer to each producer a new temporary certificate conditioned to meet the requested requirements, giving each producer the opportunity to reject such temporary authority. Movants ignore the fact that the producers and pipelines here involved have already acted upon the temporary authorizations as issued and have undoubtedly expended considerable funds in justifiable reliance thereon. Apparently Movants have also ignored the dependence of pipelines and their customers upon continued service once a reservoir of natural gas begins flowing into interstate lines. To now offer the producers an opportunity to reject a substituted temporary certificate, conditioned to provide for refunds down to the price to be fixed after the Section 7 hearing we have ordered, would clearly be contrary to the public interest. It would jeopardize the pipeline's existing gas supply from these sources, and place them in a position where, even if they could replace the gas with other supply, their investment in facilities

[1] Also see order denying applications of New York Commission for rehearing and reconsideration and motion for a stay issued December 31, 1962, in *J. Ray McDermott, et al.*, Docket No. CI63–301, *et al.*

here would be lost and new expenditures required without concomitant benefit to the public. It would also leave the producers, all of whom received temporary authorizations only upon a showing of emergency conditions, with no assurance that they could secure new outlets for their gas.

Petitioner's proposal in other words comes down to little more than an argument that we should unilaterally impose a new refund commitment upon the producers. This we will not do. Assuming, without deciding, that we have authority to impose such additional restriction where extraordinary conditions exist that would justify such action, we think this clearly would not be a proper action for us to take here. Since the producers cannot abandon service without our authority and since, as indicated above, it would not be in the public interest to approve any such abandonment request, we would be in a position of having induced producers to dedicate their gas to the market upon one set of conditions, and then imposing more stringent conditions upon them. Such a course of action, except under the most extraordinary conditions, would appear to be inconsistent with the Commission's obligation to act upon applications with "such certainty as to allow the exercise of choice upon [the producers'] part." Sunray *Mid-Continent Oil Company* v. *F.P.C.*, 270 F. 2d 404. Equally important it would so denature the value of a Commission authorization as to place any reliance upon our actions in this area in serious jeopardy.

While this case relates to the imposition of refund conditions in temporary authorizations already issued, we do not wish our determination here to be construed as indicating that we will normally impose such a condition if the applications for temporary authority were before us for the first time. On the contrary, as we made clear in our order in *J. Ray McDermott, supra*, in granting temporary authorizations at our area ceiling prices for producers to sell gas, pending the conclusion of the statutory hearing on the permanent certificate, we have balanced the competing interests of producers and consumers (as well as given full consideration to the needs for certainty of the natural gas companies and the public generally) by providing that while the temporarily certificated price is not subject to refund, the price during this interim period cannot exceed our ceiling price and the producers may not file for any higher price authorized by their contract pending issuance of the permanent certificate. Our policy in this respect was clearly set forth in the Fourth Amendment to our Statement of General Policy No. 61–1 in which we reduced the Southern Louisiana ceiling and observed that the Commission's interim ceilings represent the Commission's judgment of a ceiling which "will enable the Commission to hold the line on new sales in the area at a level consistent with the public interest and, at the same time, to enable producers to obtain authorizations which provide them a reasonable basis for proceeding with their operations and furnishing needed supplies of gas."

In view of these circumstances we find it would be contrary to the public interest, as well as inequitable, to condition the temporary certificates issued to the above-mentioned producers as requested by Movants.

The Commission orders:

The request made by the Long Island Lighting Company, Philadelphia Electric Company and the United Gas Improvement Company either to have the temporary certificates issued to the party applicants to the above-styled proceedings vacated or, in the alternative for the imposition of a condition in each of these temporaries be and hereby is denied.

Commissioners Morgan and Ross *concurring*, filed separate statements appended hereto.

MORGAN, *Commissioner*, concurring:

I concur only in the result.

Unfortunately, past indiscretions committed by this Commission in the matter of granting temporary certificates do not permit us now, in good grace, summarily to grant relief sought by the consuming public.

I therefore limit myself to the hope that proceedings on the merits of this matter will soon be concluded; and that the rates in question will be adjusted, where necessary, to correspond to the "lowest possible reasonable rate" required by the Act.[1]

I do not concur with the reasoning of the majority statement. It appears to be based on what the majority hopes it would find if a hearing were held on the subject motion. Specifically, we should not allow an institutional guilt complex regarding the improprieties that have attended past issuance and use of Section 7 temporary certificates to warp our present understanding of the true legal character of that device.[2]

The concurring statement of Commissioner Ross fully reflects my views in this matter.

ROSS, *Commissioner*, concurring:

I concur with the action of my colleagues in denying the instant motion. This separate statement is necessitated by the failure of the majority to take this occasion to remind industry of the true nature and legal character of temporaries in view of the abuses which have occurred in this area.

Since the earliest days of producer regulation, temporary authorizations permitting the interstate sale of gas have been granted in emergency situations in which expeditious action was required. This practice rapidly expanded to situations where the "emergency" was not particularly acute. Once granted by the Commission and accepted by the producer, the terms of the temporaries were rarely—if ever modified. Temporary authorization quickly became the mode of producer regulation under Section 7 of the Natural Gas Act, and this situation persists today.[3]

Producers began to view the temporary authorizations as the final word regarding the terms under which their sales would be made, and the Commission took no direct action which could be construed as being inconsistent with this belief. The oppositions to the instant motion, for example, mirror the producers' attitude that a temporary authorization, once accepted, represents virtually an unchallengeable and immutable right to sell gas under the terms of the temporary.

In view of this history, I do not consider it desirable to amend the authorizations here in question. However, I can find no justification for reinforcing the fictitious claim that a temporary somehow acquires an aspect of permanence—a notion which is legally unsound, and one which involves the possibility that excessive prices will receive continued sanction resulting in unjust enrichment to the producers.

Temporary authorizations are supposedly granted in emergency situations in order to avoid the delay involved in a detailed inquiry. They are granted summarily, without notice of hearing. As such, they represent a concession to producers to the possible detriment of their purchasers. While an application

[1] *Atlantic Refining Co.* v. *Public Service Commission*, 360 U.S. 378 at 388 (1959).

[2] See our previous understanding on this point as set forth at page 110 of Opinion No. 351, issued January 22, 1962, 27 FPC 96.

[3] In my partial dissent in *Tenneco Oil Co.*, Docket No. CI63–334, *et al.*, I noted that of 2880 temporary certificates granted in the last two years, only 31 had been superseded by permanent certificates.

for rehearing may be filed (the producers even would have us reject this), this hardly measures up to our traditional concept of justice, which assumes that interested parties will have a right to state their positions before—not after—decision is made.[2] It is crystal clear to me, as it was to this Commission twelve months ago, that temporary authorizations are subject to change on the same basis as that on which they are granted. In the remanded CATCO case, this Commission held:

> Under Section 7(c) the Commission may issue a temporary certificate in case of emergency pending the determination of an application for certificate. This appears to contemplate a continuous course of adjustment until the time that a final order determines that conditions under which a permanent certificate shall be issued. [*Continental Oil Company, et al.*, Docket No. G–11024, *et al.*, Opinion No. 351, 27 FPC 96 at p. 110]

I can find no justification for joining the majority in its purported retreat on this point. Rather than retreat, the instant motion presents an excellent opportunity for us to emphasize the essentially transient nature of temporaries, consistent with our holding in *CATCO*, *supra*.

The necessity for firmly adopting such a policy is manifest. Only five months ago, we found the in-line price in Texas Railroad District No. 4 to be 15¢, at least as of September 28, 1960.[3] It is difficult to conceive that the in-line price with respect to the contracts here involved has escalated since that time to 18¢, an increase of 20 percent. Yet the majority closes its eyes to this significant determination, and not only denies the relief requested, but goes further and voices its determination to perpetuate the conditions under which excessively high prices will be charges again and again without providing for recoupment down to the proper level. Fearing that its action might be misconstrued, the majority, in what is clearly dicta on page 220, indicates that it will not normally impose refund conditions in initial temporary authorizations at the ceiling price levels.

In my opinion, there is no rational basis for such a position. For one thing, it is obvious that all of the reasons cited in the majority's order for refusing to impose the requested refund conditions are clearly inapplicable to situations in which we would be considering an initial application for temporary authorization. The majority's apparent rationale for this position is found in its statement that it balances the competing interests of industry and the consumer by limiting temporary authorizations to prices established in the Statement of General Policy, and by providing for no rate increases during the term of temporary authorization. However, the prospect of limiting producer prices to the applicable ceiling is small consolation to the consumer when he is convinced—and with justification—that several of the ceilings are unjustifiably high.

In summary, I am compelled to voice my disagreement with the majority's apparent insistence to regulate producer prices. in the important interim period pending the establishment of just and reasonable rates, by means of temporary authorizations, and on as summary a basis as possible. In my opinion, initial prices of producers should be governed by permanent certificates. To the extent

ORDER DENYING MOTION TO IMPOSE PRICE CONDITIONS IN TEMPORARY CERTIFICATES

(Issued February 5, 1963)

On December 12, 1962, Public Service Electric and Gas Company, Long Island Lighting Company and United Gas Improvement Company (Movants) filed a motion to impose price conditions in temporary certificates heretofore issued to the independent producers in the above listed dockets.[1] Responses to the motion were filed by Transcontinental Gas Pipe Line Corporation (Transco) and 15 independent producers.

The producers listed above have each been granted temporary authority to make sales to Transco. In each instance the authority was granted without condition as to refund to a price below that at which the sales would be initiated.

---

[1] The matters listed above which were previously consolidated with the Area Rate Proceeding, Docket No. AR61-2 were severed therefrom by order of the Commission issued December 31, 1962, in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.* The above-listed producers were consolidated with that case by that order. The motion herein was directed to the individual dockets, however, and will be treated accordingly, except *Union Texas Petroleum*, Docket No. CI61-1411, which was dismissed and cancelled by Order issued September 14, 1962, and *Amerada Petroleum Corporation*, Docket No. CI60-688, which is the subject of a settlement agreement and was severed from the proceedings in Docket No. G-13221, et al, by Order issued February 1, 1963, p. 204, *supra*.

The initial price would, however, continue to be collected until a prospective price could be determined after hearing upon the applications. The contracts were entered into during the years 1958 through 1960; the temporary authorizations were issued from 1958 through January 12, 1961.

Sales of gas were commenced by each of the producers pursuant to the temporary authority. Movants have requested the Commission to either (1) terminate the existing temporary authorizations and concurrently issue temporary authorizations containing conditions which would make the sales subject to refund at a lower price, or (2) in the alternative, to amend the existing temporary certificates by imposing price conditions in order to provide for appropriate refund from the date of the Commission's order. Movants indicate in addition that "where appropriate, the Commission should provide an opportunity for the applicants to reject the conditioned proffered certificate."

Essentially the motion constitutes an application for rehearing of the Commission's Letter Orders issuing temporary authorization to the above-listed producers. Section 19(a) of the Natural Gas Act provides that an application for rehearing must be submitted within 30 days following the issuance of an order. The motion herein was not submitted within the statutory 30-day period following the issuance of the temporary authorizations. There is no question that such temporary authorizations constitute appealable orders and, therefore, rehearing should be sought within 30 days. However, we recognize that the letter orders issuing the authorizations were unreported, although copies thereof were available to the public. We shall not, therefore, dismiss the motion as being untimely. However, for the reasons hereinafter set forth, we must deny the motion to terminate the existing temporary authorizations.

Section 7(c) of the Natural Gas Act empowers the Commission to issue temporary certificates when emergency situations exist. We have promulgated regulations recognizing certain situations which constitute emergency situations as to independent producers. See Regulations under the Natural Gas Act, Section 157.28.[2] Each of the above-listed producers requested the issuance of temporary authorization to sell gas and set forth an emergency situation which, under our regulations, permitted the issuance of such authority. Temporary certificates were therefore issued. Movants would now have us withdraw the existing authority and proffer to each producer a new temporary certificate conditioned to meet the requested requirements, giving each producer the opportunity to reject such temporary authority. Movants ignore the fact that the producers and pipe line here involved have already acted upon the temporary authority as issued and have undoubtedly expended considerable funds in justifiable reliance thereon and, in the case of the pipe line, Transco, has become dependent upon this source of supply, in part, to meet its market requirements. To now offer the producers an opportunity to reject a substituted temporary certificate, conditioned to provide for refunds down to the price to be fixed after the Section 7 hearing we have ordered, would clearly be contrary to the public interest. It would jeopardize the pipeline's existing gas supply from these sources, and place them in a position where, even if they could replace the gas with other supply, their investment in facilities here would be lost and new expenditures required without concomitant benefit to the public. It would also leave the producers, all of whom received temporary authorizations only upon a showing of emergency conditions, with no assurance that they could secure new outlets for their gas.

---

[2] Also see Order denying applications of New York Commission for rehearing and reconsideration and motion for a stay issued December 31, 1962, in *J. Ray McDermott, et al.*, Docket No. CI63-301, *et al.*

Petitioner's proposal in other words comes down to little more than an argument that we should unilaterally impose a new refund commitment upon the producers. This we will not do. Assuming, without deciding, that we have authority to impose such additional restriction where extraordinary conditions exist that would justify such action, we think this clearly would not be a proper action for us to take here. Since the producers cannot abandon service without our authority and since, as indicated above, it would not be in the public interest to approve any such abandonment request, we would be in a position of having induced producers to dedicate their gas to the market upon one set of conditions, and then imposing more stringent conditions upon them. Such a course of action, except under the most extraordinary conditions, would appear to be inconsistent with the Commission's obligation to act upon applications with "such certainty as to allow the exercise of choice upon (the producer's) part". *Sunray Mid-Continent Oil Company* v. *F.P.C.*, 270 F. 2d 404. Equally Important it would so denature the value of a Commission authorization as to place any reliance upon our actions in this area in serious jeopardy.

While this case relates to the imposition of refund conditions in temporary authorizations already issued, we do not wish our determination here to be construed as indicating that we will normally impose such a condition if the applications for temporary authority were before us for the first time. On the contrary, as we made clear in our order in *J. Ray McDermott, supra*, in granting temporary authorizations at our area ceiling prices for producers to sell gas, pending the conclusion of the statutory hearing on the permanent certificate, we have balanced the competing interests of producers and consumers (as well as given full consideration to the needs for certainty of the natural gas companies and the public generally) by providing that while the temporarily certificated price is not subject to refund, the price during this interim period cannot exceed our ceiling price and the producers may not file for any higher price authorized by their contract pending issuance of the permanent certificate. Our policy in this respect was clearly set forth in the Fourth Amendment to our Statement of General Policy No. 61-1 in which we reduced the Southern Louisiana ceiling and observed that the Commission's interim ceilings represent the Commission's judgment of a ceiling which "will enable the Commission to hold the line on new sales in the area at a level consistent with the public interest and, at the same time, to enable producers to obtain authorizations which provide them a reasonable basis for proceeding with their operations and furnishing needed supplies of gas."

We recognize that at the time the motion was made it appeared that considerable time would lapse before the applications herein would be heard and disposed of. However, since that time, we have consolidated for hearing the above-listed cases as well as most of the other certificate applications now pending for the sale of gas in Southern Louisiana.[4] We anticipate that a final disposition in that proceeding will be forthcoming in the not too far-distant future. A decision therein would dispose of the above-listed applications.

The Commission orders:

The Motion of Public Service Electric and Gas Company, Long Island Lighting Company and the United Gas Improvement Company to impose price conditions in temporary certificates is hereby denied.

Commissioners Morgan and Ross *concurring* for the reasons set forth in their respective concurring statements appended to the order issued February 5, 1963, in Docket No. CI62-1544, *et al.*, *Amerada Petroleum Corporation, et al.*, p. 218, *supra*, to the extent applicable to this order.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP62-219

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 5, 1963)

On March 19, 1962, as supplemented on May 7, 1962, May 28, 1962, and August 21, 1962, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP62-219 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of pipeline and compression facilities to enable Applicant to attach new supplies of natural gas, all as more fully set forth in the application as supplemented.

Applicant seeks authorization for the construction and operation of the following facilities:

(1) Approximately 160 miles of 24-inch, 14-inch, and 8-inch gas transmission line BT-9 and the necessary lateral lines from BT-9 to central field points, together with associated metering and regulating facilities;

(2) Approximately 29.5 miles of 16-inch loop line parallel to existing pipelines LM-2 and BT-1 from a point near Perla, Arkansas, westward;

(3) One 1,500 horsepower compressor installation (Parish Compressor Station) located on Line BT-9 near its junction with Line BT-1 near Paris, Arkansas; and

(4) One 4,000 horsepower compressor installation (Danville Compressor Station) located near Danville, Arkansas, on Line BT-1.

Applicant seeks authorization for the operation in interstate commerce of the following existing facilities:

(1) That part of Applicant's Line BT-1 and its associated market laterals and related facilities, extending southerly from the point of connection with proposed Line BT-9 approximately 76 miles to Jones Mill, Arkansas;

(2) Applicant's 12-inch Line LM-2 and related facilities extending from a point near Jones Mill, Arkansas, approximately 9 miles to Applicant's Perla Regulating Station; and

(3) Applicant's 18-inch Line T extending easterly from Applicant's Perla Regulating Station approximately 125 miles to a point near Helena, Arkansas, and its associated market laterals and related facilities, together with the construction and operation of the necessary equipment at the Perla Regulating Station to interconnect Line T with all the other interstate pipeline facilities at this central market dispatching point.

The new facilities are estimated to cost approximately $13,101,300, which will be financed from internally generated funds and short term bank loans. The existing facilities cost approximately $10,417,379.

No new sales or service to new markets are proposed in the subject application. The proposed construction and operation are to enable Applicant to augment its overall gas supply. Related producer certificate applications are pending in Docket Nos. CI62-1184, CI62-1239, CI62-1243, CI62-1251, CI62-1253 and CI62-1316.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 24, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, in this proceeding. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure

be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 26, 1943, in Docket No. G–252 (3 FPC 910).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) The certificate issued hereinafter should be conditioned upon the issuance to and acceptance by the producers of their related certificate authorizations in Docket Nos. CI62–1184, CI62–1239, CI62–1243, CI62–1251, CI62–1253, and CI62–1316.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Arkansas Louisiana Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shal be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues; provided, however, that no construction shall be undertaken or facilities placed in operation as proposed herein until the issuance to and acceptance by the producers of their related certificate authorizations in Docket Nos. CI62–1184, CI62–1239, CI62–1243, CI62–1251, CI62–1253 and CI62–1316.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63-59

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 5, 1963)

On September 7, 1962, as supplemented on September 18, 1962, Cities Service Gas Company (Applicant) filed in Docket No. CP63-59 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas transportation facilities, to meet the increased natural gas requirements of The Gas Service Company (Gas Service) in the Kansas City area of Kansas and Missouri, all as more fully set forth in the application, as supplemented.

Applicant seeks authorization to loop approximately 15.5 miles of its Ottawa-Sedalia 12-inch pipeline with 20-inch pipeline beginning at the east end of Applicant's present 20-inch pipeline loop in the SE¼, Sec. 23, T16S, R23E, thence easterly paralleling Applicant's 12-inch pipeline a distance of 11 miles to the NW¼, Sec. 15, T16S, R25E, all located in Miami County, Kansas; and beginning at the east end of Applicant's present 20-inch pipeline loop in the SE¼, Sec. 16, T45N, R30W, thence easterly paralleling Applicant's 12-inch pipeline a distance of 4.5 miles to the SW¼, Sec. 8, T45N, R29W, all located in Cass County, Missouri.

Applicant also seeks authorization to construct approximately 23 miles of 20-inch pipeline beginning at its Ottawa-Sedalia 12-inch and 20-inch pipeline in the NE¼, Sec. 15, T45N, R30W, Cass County, Missouri, thence in a northerly direction a distance of 23 miles to a connection with Gas Service's 12-inch and 10-inch distribution pipeline currently serving the East Kansas City, Missouri, area in the SE¼, Sec. 26, T49N, R30W, Jackson County, Missouri.

The proposed construction is required to deliver to Gas Service its peak day requirements for the Kansas City area during the heating season of 1962-63 and thereafter. Applicant cannot deliver to Gas Service the required increased volumes of gas through its present Kansas City area delivery points, and the proposed facilities will establish a new point of delivery to Gas Service near the East Kansas City area, which area is experiencing rapid growth, and through which service to Kansas City could be maintained in the event of a catastrophe at any one of the present delivery points.

Applicant estimates the cost of the proposed facilities to be $2,310,000, which will be financed from treasury cash.

On October 12, 1962, the Commission issued a temporary certificate authorizing the construction and operation of the proposed facilities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 24, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas

company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (3) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

KENTUCKY WEST VIRGINIA GAS COMPANY, DOCKET NO. CP63–134

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued February 5, 1963)

On November 19, 1962, Kentucky West Virginia Gas Company (Applicant) filed in Docket No. CP63–134 an application pursuant to Section 7(b) of the Natural Gas Act, for authority to abandon its 730 horsepower Paintsville Compressor Station located in Johnson County, Kentucky.

On October 10, 1962, 28 FPC 579, the Commission issued an order authorizing the abandonment of service by the Applicant to Louisville Gas and Electric Company in Docket No. CP62–239.

The facilities described above were constructed and operated to perform the delivery of natural gas to the Louisville Gas and Electric Company, which service has been abandoned.

The estimated salvage value of the facilities is $5,000 and the estimated cost of removal is $3,000 according to the Applicant's statement. The compressor was installed in 1923. It is no longer required to enable Applicant to render service.

Pursuant to due notice, a public hearing was held in Washington, D.C. on January 21, 1963, respecting the matters involved in and the issues presented by the application. No petition to intervene or protest to the granting of the application has been received. Staff Counsel, moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision herein pursuant to Section 1.30(c) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company within the meaning of the Natural Gas Act, as stated in the first paragraph of the application.

(2) The sale of natural gas to Louisville Gas and Electric Company by Applicant has been terminated and abandoned and the facilities above-described no longer serve the purpose for which they were constructed, therefore the public convenience and necessity no longer require their operation or preservation.

(3) The estimated salvage value of the subject facilities is $5,000.00 and the estimated cost of salvaging them is $3,000.00.

(4) A request during the public hearing by Staff Counsel for omission of the intermediate decision procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record, and not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the said rules.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon the facilities as heretofore described, as more fully described in the application.

(B) Applicant shall advise the Commission as to the date of abandonment of the facilities within 10 days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA AND LONE STAR GAS COMPANY, DOCKET NO. CP63-87

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 5, 1963)

On October 8, 1962, Natural Gas Pipeline Company of America (Natural) and Lone Star Gas Company (Lone Star) filed a joint application in CP63-87, pursuant to Section 7 of the Natural Gas Act, for authorization by Natural to acquire by purchase from Lone Star, and operate, 265.25 feet of 16-inch pipeline located in Stephens County, Oklahoma, and for Lone Star to abandon such facilities. The line extends from Lone Star's metering facilities to a connection with Natural's 26-inch main line.

Natural was authorized by an order of the Commission on May 18, 1962, in Docket No. CP63–121 to construct and operate an 880 HP booster compressor station in the vicinity of Lone Star's metering station. Further study has revealed that the most feasible location for its booster station would be directly adjacent to Lone Star's metering station and that acquisition of the latter's short 16-inch pipeline would result in a more orderly and efficient operation of all the facilities involved.

Natural will purchase Lone Star's facilities for $1,934 which is the original cost less accrued depreciation. Lone Star will not interfere with or restrict the transportation service of the present use of the segment of its pipeline system by transferring it to Natural.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 23, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Natural and Lone Star are natural gas companies within the meaning of the Natural Gas Act as heretofore found by the Commission in Docket No. G–235 (3 FPC 830) and Docket No. G–442 (4 FPC 565).

(2) The facilities hereinbefore described are being used and will continue to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition by Natural of these facilities and the operation thereof as integral parts of its pipeline system as well as the abandonment of operations thereof by Lone Star and their disposition are subject of the requirements under the Natural Gas Act.

(3) The acquisition of the 265.25 feet of transmission pipeline from Lone Star by Natural for the purpose of allowing the economical pressurizing of the gas being transported is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) A certificate of public convenience and necessity be and is hereby issued authorizing Natural Gas Pipeline Company of America to acquire and operate the facilities hereinbefore mentioned and more fully described in the application for the purposes therein stated and upon the terms and price set forth, subject to the conditions hereinafter stated.

(B) The certificate issue and the rights granted thereunder are conditioned by and upon compliance all applicable regulations and statutory provisions by the Applicants and particularly the terms and conditions set forth in paragraphs (a), (b), (d) and (e) of Section 157.20 of Regulations Under The Natural Gas Act.

(C) The operation of the facilities acquired by Natural from Lone Star shall be continued as altered by installation of the booster compressor station within the time provided for in the Commission's order in Docket No. CP62–121 issued on May 18, 1962.

(D) The Lone Star Gas Company shall notify the Commission in writing of the day of transfer of its operation of the facilities to Natural within ten days thereof.

737–369—64——18

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-7

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 5, 1963)

On July 9, 1962, Northern Natural Gas Company (Applicant) filed in Docket No. CP63-7 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval of the Commission to abandon certain facilities and for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in Dakota and Washington Counties, Minnesota, for the continued sale of natural gas to Organic Soil Builders, Inc., and the South St. Paul Sewage Disposal Plant, all as more fully set forth in the application.

Because the City of South St. Paul, Minnesota, is expanding its disposal plant in Dakota County so as to make a sludge pond over and across Applicant's existing facilities, Applicant proposes to abandon in place part of its 6-inch branchline serving the Newport-St. Paul Cold Storage Plant in Washington County and all of its 2-inch branchline serving the other two customers in Dakota County. Applicant further proposes to remove and relocate one town border station in Dakota County and to construct and operate approximately 1,600 feet of 3-inch branchline in Dakota County in order to maintain service to the two plants in that county. Applicant also seeks authorization to sell a portion of the 6-inch line and the town border station located on the east side of the Mississippi River in Washington County to Northern States Power Company which company will provide natural gas service to the cold storage company.

The proposed facilities are estimated to cost $12,050, to be financed from funds on hand. The 6-inch line and town border station will be sold to Northern States Power Company for one dollar.

Applicant was issued a temporary certificate to relocate the subject facilities on September 5, 1962.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 22, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission, and the abandonment of said facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity, and should be approved as hereinafter ordered.

(4) The facilities proposed to be constructed by Applicant, as hereinbefore described and as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(6) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Northern Natural Gas Company, of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same are hereby granted.

(B) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP63-88

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 5, 1963)

On October 8, 1962, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP63-88 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional 1,020 Mcf of firm natural gas per day to National Gas and Oil Corporation (National), Newark, Ohio, all as more fully set forth in the application on file with the Commission.

It appears that National requires the additional volumes of natural gas in order to meet its anticipated increased requirements resulting from an increase in residential and commercial customers occasioned by the buildup of a new industry in National's service area.

No new facilities will be required for the proposed service.

The proposed sale will be made pursuant to Applicant's FPC Gas Rate Schedule DCQ–C.

By letter, dated November 20, 1962, Applicant was issued a temporary certificate to render the proposed additional service.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 22, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware Corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G–880 (6 FPC 148).

(2) The additional transportation and sale of natural gas by Applicant hereinbefore described, as more fully described in the application in this proceeding, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such transportation and sale are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The subject additional transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Eastern Transmission Corporation, to transport and sell additional volumes of natural gas to National as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-50

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 5, 1963)

On August 30, 1962, as supplemented on November 28, 1962, United Gas Pipe Line Company (Applicant) filed in Docket No. CP63-50 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963 and the operation of unspecified natural gas facilities to enable Applicant to make new industrial sales of natural gas from its main pipeline system, all as more fully set forth in the application, as supplemented.

The purpose of this "budget-type" application is to enable Applicant to act with reasonable dispatch in establishing new delivery points without the delay incident to the filing and processing of individual certificate applications for each new delivery point.

None of the facilities for which Applicant seeks authorization herein will be used to deliver gas to any electric power company for use as boiler fuel in the generation of electricity.

The total cost of the proposed facilities will not exceed a maximum of $750,000, and no single project will exceed a cost of $200,000, all to be financed from current working funds.

Annual deliveries to direct industrial customers through the subject facilities will not exceed a maximum of 10,000,000 Mcf, and said facilities will not increase the main line delivery capacity of Applicant's system.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 22, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are proposed to be used in the transportation and delivery of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The proposed construction and operation of facilities to enable Applicant to make new industrial sales from its main pipeline system are required by

the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization hereinafter granted, a statement showing by project: (a) a description of the facilities installed, (b) the location of said facilities, (c) names of customers served through said facilities, (d) actual final costs, and (e) estimates of annual and peak day deliveries to and estimates of sales to and revenues from each customer.

(7) The facilities hereinafter authorized should not be used to deliver gas to any electric power company for use as boiler fuel in the generation of electricity, to deliver an annual volume of gas in excess of 10,000,000 Mcf, or to increase the main line delivery capacity of Applicant's system.

(8) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $750,000, with no single project to exceed a cost of $200,000.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing United Gas Pipe Line Company to construct during the calendar year 1963 the proposed facilities hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, to establish delivery points for new industrial sales from Applicant's main pipeline system, and to operate such facilities and deliver natural gas for said industrial sales.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit within 60 days after the expiration of the authorization herein granted a statement showing by project: (a) a description of the facilities installed, (b) the location of said facilities, (c) names of customers served through said facilities, (d) actual final costs, and (e) estimates of annual and peak day deliveries to and estimates of sales to and revenues from each customer.

(D) The facilities herein authorized shall not be used to deliver natural gas to any electric power company for use as boiler fuel in the generation of electricity, to deliver an annual volume of gas in excess of 10,000,000 Mcf, or to increase the main line delivery capacity of Applicant's system.

(E) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for

facilities to be constructed thereunder are hereby limited to a maximum of $750,000, with no single project to exceed a cost of $200,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-132

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued February 5, 1963)

On November 15, 1962, United Gas Pipe Line Company (Applicant) filed in Docket No. CP63-132 an application pursuant to Section 7(b) of the Natural Gas Act for authority to abandon and remove a duel orifice meter and regulator station and appurtenant facilities located in the B.B.B. & C.R.R. Survey Abstract 95, Jefferson County, Texas.

The Applicant states that the facilities above described are used to serve natural gas to the Williams Plant of Koppers Company, Inc.; and that the sale has been terminated by the purchaser pursuant to the terms of the contract of sale which expires on January 1, 1963, thus rendering the facilities idle and of no use as a matter of public convenience and necessity.

Applicant proposes to dismantle and remove the said facilities after service to Koppers Company, Inc., has ended and to use them elsewhere.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 28, 1963 respecting the matters involved in and the issues presented by the application. No petition to intervene or protest to granting the application has been received. Staff Counsel, moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company within the meaning of the Natural Gas Act and the facilities above described are a segment of the interstate pipeline system and subject to the jurisdiction of the Commission.

(2) The use of the said facilities as a part of the Applicant's pipeline system was terminated on January 1, 1963 when the delivery of gas through them was discontinued. Therefore the public convenience and necessity does not require the continued maintenance or operation thereof.

(3) The removal of these facilities from the site of their present installation will not affect the public convenience and necessity.

(4) A request made during the public hearing by Staff Counsel for the omission of the intermediate decision procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record, and not having been denied by the Commission is granted pursuant to Section 1.30(c)(1) of the said rules.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon, dismantle and remove the facilities heretofore described, as more fully described in the application.

(B) Applicant shall advise the Commission of the date of removal of the facilities within 10 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

COLUMBIA RIVER BASIN, HEADWATER BENEFIT INVESTIGATION, DOCKET NO. E-6384

FINDINGS AND ORDER

(Issued February 6, 1963)

Past Proceedings:

Pursuant to the Commission's order issued June 28, 1950 (Docket No. E-6404), headwater benefit investigations were carried out with respect to projects in the Columbia River basin, which resulted in an order issued by the Commission on February 25, 1952, 11 FPC 832, to the effect that none of the licensees under consideration had been directly benefited by headwater improvements of another licensee, a permittee, or of the United States, during the period from 1931 through December 31, 1948.

Subsequently, in compliance with an order issued February 4, 1952, 11 FPC 768, which was supplemented on December 5, 1952, and again on January 16, 1956, 15 FPC 1024, the staff of the Commission undertook further headwater benefit investigations of the Columbia basin under Docket No. E-6384. As a result, the Commission issued interim determinations on December 27, 1956, 16 FPC 1388, December 31, 1957, 18 FPC 835 and December 11, 1958, 20 FPC 807 in which Puget Sound Power & Light Company and Public Utility District No. 1 of Chelan County, Washington, were ordered to make payments to the United States, The Montana Power Company, and The Washington Water Power Company for headwater benefits received by the Rock Island project (Project No. 943). The period covered by the three determinations extends from 1949 through 1955.

Additional work in Docket No. E-6384 was undertaken in accordance with the supplemental order of January 16, 1956, and resulted in a proposed report by the Commission's staff in which payments for headwater benefits received during the years 1949-1956, inclusive, were recommended. Comments on this proposed report were made by the non-Federal parties, and on May 15, 1961, they submitted an alternative proposal for determining payments. Comments on the proposed report and the alternative proposal were made by the Department of the Army on July 10, 1961, and by the Department of the Interior on March 15, 1962. Interior's comments included a further proposal which was sent to other parties for comments. Such comments were due on August 15, 1962, and have been received by the Commission.

The Present Proceeding:

By letter dated January 2, 1962, Corporate Services, Inc., on behalf of Public Utility District No. 2 of Grant County, Washington, Public Utility District No. 1 of Chelan County, Washington, Public Utility District No. 1 of Pend Oreille County, Washington, The Montana Power Company, and The Washington Water Power Company, requested that the Commission make a determination of payments under Section 10(f) of the Federal Power Act for the period of the Pacific Northwest Coordination Agreement, and for projects subject to the Agreement. A similar request was made by the Department of the Interior in Assistant

Secretary Holum's letter of February 7, 1962. The period of the Pacific Northwest Coordination Agreement for which a determination under Section 10(f) was sought by these parties was for one year, beginning September 1, 1961, and ending August 31, 1962. In reply to the requests mentioned above, the Commission, in letters dated March 1, 1962, informed the parties that it had directed its staff to proceed as expeditiously as possible with the necessary studies and investigations. Accordingly, the Commission's staff made an investigation and issued a report dated July, 1962, recommending payments under Section 10(f) of the Federal Power Act for the aforesaid one-year period.

The Staff Report of July, 1962, was served on all interested parties under date of July 20, 1962. All of the interested non-Federal parties and the Secretary of the Interior filed exceptions to the Staff Report and the non-Federal parties requested a hearing.

By order issued November 2, 1962, the Commission directed that a hearing be held respecting the matters involved and the issues presented by the exceptions to the July 1962 Staff Report in this matter, and that a prehearing conference be held to consider the matters enumerated in Section 1.18(b) of the Commission's Rules of Practice and Procedure. On November 19, 1962, the prehearing conference was held and on November 28, 1962, the Presiding Examiner issued his Specification of Pre-Trial Conference Results Pursuant to Rule 1.18(d), directing the parties to serve prepared direct testimony in support of their positions and setting a hearing on the matters involved and the issues presented for March 25, 1963.

On December 18, 1962, the parties to this proceeding submitted to the Commission the Pacific Northwest Coordination Agreement, 1962–1963, for consideration in connection with proceedings under Section 10(f) of the Federal Power Act.

The parties which have filed exceptions to the Staff Report of July 1962 do not agree to all portions of the recommendations of the Report relative to payments for headwater benefits due the United States, but have offered to consent to the entry of an order by the Commission setting forth the assessments herein specified without the necessity of a public hearing on the issues raised by the exceptions. It is in the public interest that such offer be accepted and that a protracted and expensive public hearing be avoided.

The Commission finds:

(1) Seven headwater reservoir projects are included in the present investigation of headwater benefits under Docket No. E–6384. Three are owned by the United States and four by non-Federal developers operating under licenses issued by the Federal Power Commission. Projects and owners are listed below.

Federal		Non-Federal		
Owner	Project	Owner	Project	FPC project No.
United States (USBR) [1]	Hungry Horse	The Montana Power Co.	Kerr	5
Do	Grand Coulee	The Washington Water Power Co.	Noxon Rapids	2075
United States (USCE) [2]	Albeni Falls	Public Utility District No. 1 of Chelan County.	Chelan	637
		Public Utility District No. 1 of Pend Oreille County.	Sullivan Lake	2225

[1] USBR = Bureau of Reclamation.
[2] USCE = Corps of Engineers.

(2) Each of the above-mentioned reservoir projects except Sullivan Lake includes a hydroelectric plant which is benefited by at-site, and in some instances by upstream, storage. In addition, ten projects, situated downstream from one or more of the six headwater improvements, are affected by the release of water from a reservoir, or reservoirs, lying above them. Head and limited pondage have been developed at these projects for the production of hydroelectric power. Of the ten, four are owned by the United States and six by non-Federal entities. The names of downstream projects and their owners are shown in the tabulation below.

Federal		Non-Federal		
Owner	Project	Owner	Project	FPC Project No.
United States (USCE)	Chief Joseph	The Montana Power Co.	Thompson Falls	1869
Do	McNary	The Washington Water Power Co.	Cabinet Gorge	2058
Do	The Dalles	Public Utility District No. 1 of Pend Oreille County.	Box Canyon	2042
Do	Bonneville	Public Utility District No. 1 of Chelan County.	Rocky Reach	2145
		Do	Rock Island	943
		Public Utility District No. 2 of Grant County.	Priest Rapids	2114

(3) The purpose of the present investigation is to determine what payments should be made to the United States, and to licensees, in accordance with the provisions of Section 10(f) of the Federal Power Act, for headwater benefits received during the period from September 1, 1961, through August 31, 1962, from headwater improvements in the Columbia River basin, and in accordance with the offer of settlement of the parties, to determine such payments for the period from September 1, 1962, through August 31, 1963.

(4) Under the conditions existing during the period from September 1, 1961, through August 31, 1962, the principal function of power storage in the portion of the Columbia River basin under consideration in this proceeding was to increase the low-water flow of the Columbia River and the tributaries involved. The principal measure of the benefits from power storage facilities during such period was the increase in flow which would have been made available from storage releases had the critical dry period recurred. The critical period in this instance is a seven-month period beginning September 16 and ending April 15, during which time it is assumed the natural flows of the critical water-year 1936–1937 are repeated.

(5) The dam and reservoir facilities at a headwater improvement project provide two power functions. The first is a storage function, which is beneficial to the at-site power plant and each power plant downstream. The second is a head function, which is beneficial to the at-site power plant only. Therefore, the annual cost of interest, maintenance, and depreciation, namely 10(f) costs, pertaining to the dam and reservoir of each headwater improvement project, to be borne by power, both at-site and downstream should be apportioned to storage and head functions, and the costs so apportioned to storage in turn apportioned to power plants, at-site and downstream. Under the conditions existing during the period from September 1, 1961, through August 31, 1962, this cost apportionment should be accomplished as follows:

The 10(f) costs to be borne by power are divided in proportion to the energy available from storage releases during the critical period and the energy made available by the head at the storage site during the critical period. Since,

as previously noted, the head function provides only at-site benefits, whereas the storage function provides both at-site and downstream benefits, the cost allocated to the storage function is the cost to be apportioned among the projects, at-site and downstream. This apportionment is made in direct proportion to the energy available at each plant during the critical period from storage at the headwater improvement. The cost attributable to the storage function is determined by the following formula:

$$C_s = C_p \frac{P_s}{P_s + P_h}$$

in which C_s = annual 10(f) power costs of the dam and reservoir apportioned to storage,

C_p = annual 10(f) costs of the dam and reservoir to be borne by power both at-site and downstream,

P_s = critical period energy, at-site and downstream from at-site storage,

P_h = critical period energy, at-site from natural flow and from at-site and upstream storage.

The annual 10(f) costs of each headwater improvement thus apportioned to the storage function are distributed among the power plants, at-site and downstream, in proportion to the energy available at each plant during the critical period from the storage in the reservoir being considered. The annual costs thus apportioned to a downstream non-Federal plant represent the annual payment to be made by the owner of that plant for headwater benefits, provided that such payment does not exceed the value of the benefits received.

(6) The charges computed by the method described in paragraph (5) of these findings to be payable to the United States by owners of non-Federal hydroelectric projects for the period between September 1, 1961 through August 31, 1962, under Section 10(f) of the Federal Power Act are as follows:

The Montana Power Co	$195,600
The Washington Water Power Co	263,600
Public Utility District No. 1 of Pend Oreille County	58,400
Public Utility District No. 1 of Chelan County	534,000
Public Utility District No. 2 of Grant County	302,900
Total	1,354,500

(7) All factors relevant to a determination under Section 10(f) of the Federal Power Act of the amounts to be assessed against the owners of the non-Federal hydroelectric projects and paid to the United States for the period from September 1, 1962, through August 31, 1963, under the conditions imposed by the Pacific Northwest Coordination Agreement, 1962–1963, are identical with those of the period from September 1, 1961 through August 31, 1962.

(8) The charges assessed in this proceeding for benefits conferred by headwater improvements are equitable, based upon all of the facts and circumstances existing during the periods, September 1, 1961 through August 31, 1962, and September 1, 1962 through August 31, 1963, and the amounts of such charges have been agreed to by all parties hereto.

(9) The owners of non-Federal hydroelectric projects have agreed to make payments as between one another during the period September 1, 1961 through August 31, 1962, which include the following payments in settlement of all liabilities under Section 10(f) of the Federal Power Act:

The Washington Water Power Company to the Montana Power Company:

Noxon Rapids to Kerr	$36,100
Cabinet Gorge to Kerr	23,400
Total	59,500

Public Utility District No. 1 of Pend Oreille County to the Montana Power Company:

Box Canyon to Kerr	$9,000

Public Utility District No. 1 of Pend Oreille County to the Washington Water Power Company:

Box Canyon to Noxon Rapids	$4,200

Public Utility District No. 1 of Chelan County to the Montana Power Company:

Rocky Reach to Kerr	$22,600
Rock Island to Kerr	10,400
Total	33,000

Public Utility District No. 1 of Chelan County to the Washington Water Power Company:

Rocky Reach to Noxon Rapids	$10,600
Rock Island to Noxon Rapids	5,100
Total	15,700

Public Utility District No. 2 of Grant County to the Montana Power Company:

Priest Rapids to Kerr	$19,900

Public Utility District No. 2 of Grant County to the Washington Water Power Company:

Priest Rapids to Noxon Rapids	$9,300

Public Utility District No. 2 of Grant County to Public Utility District No. 1 of Chelan County:

Priest Rapids to Chelan	$16,300

(10) The owners of non-Federal hydroelectric projects have agreed to make payments as between one another during the period September 1, 1962 through August 31, 1963, which are identical to the payments set forth in the preceding paragraph, except that The Washington Water Power Company has agreed to pay Public Utility District No. 1 of Pend Oreille County the sum of $2,300 which the District has agreed to accept in full settlement of all obligations of owners of all downstream non-Federal hydroelectric projects under Section 10(f) of the Federal Power Act. Such payment is in consideration of the partial replacement during the period September 1, 1962 through August 31, 1963, of Noxon Rapids storage by Sullivan Lake storage required by physical limitations on the drawdown on Noxon Rapids. During the period September 1, 1961 through August 31, 1962 the benefits conferred by storage in Sullivan Lake on non-Federal downstream plants were not guaranteed or otherwise provided for under the coordination agreement. Accordingly, such benefits, if any, are not determined in this proceeding.

(11) The joint offer of settlement of the parties constitutes a reasonable voluntary agreement as between non-Federal parties under Section 13.1 of the Regulations under The Federal Power Act and should be approved.

(12) Section 10(f) of The Federal Power Act requires that the owners of projects benefiting from headwater improvements shall pay to the United States the cost of making headwater benefits determinations as fixed by the Commission. Salaries and other expenses incurred by the staff in connection with this investi-

gation are estimated to be $2,900. On the basis of respective payments and receipts this cost would be divided among the several parties as follows:

The Montana Power Co	$400
The Washington Water Power Co	750
Public Utility District No. 1 of Pend Oreille County	150
Public Utility District No. 1 of Chelan County	1,000
Public Utility District No. 2 of Grant County	600
Total	2,900

The Commission orders:

(A) The payments to be made to the United States by the owners of the non-Federal Hydroelectric projects for the period September 1, 1961 through August 31, 1962 are assessed under Section 10(f) of the Federal Power Act as follows:

The Montana Power Co	$195,600
The Washington Water Power Co	263,600
Public Utility District No. 1 of Pend Oreille County	58,400
Public Utility District No. 1 of Chelan County	534,000
Public Utility District No. 2 of Grant County	302,900
Total	1,354,500

(B) The payments to be made to the United States by the owners of the non-Federal hydroelectric projects for the period September 1, 1962 through August 31, 1963 are assessed under Section 10(f) of the Federal Power Act as follows:

The Montana Power Co	$195,600
The Washington Water Power Co	263,600
Public Utility District No. 1 of Pend Oreille County	58,400
Public Utility District No. 1 of Chelan County	534,000
Public Utility District No. 2 of Grant County	302,900
Total	1,354,500

(C) The payments agreed upon between the owners of the non-Federal hydroelectric projects as set forth in Findings (9) and (10) are hereby approved as a settlement among the non-Federal parties, in lieu of Section 10(f) determinations, pursuant to Section 13.1 of the Regulations under the Federal Power Act for the periods September 1, 1961 through August 31, 1962, and September 1, 1962, through August 31, 1963.

(D) The several parties shall pay to the Federal Power Commission, to defray the cost of making this determination, the sum of $2,900, to be divided as follows:

The Montana Power Co	$400
The Washington Water Power Co	750
Public Utility District No. 1 of Pend Oreille County	150
Public Utility District No. 1 of Chelan County	1,000
Public Utility District No. 2 of Grant County	600
Total	2,900

(E) The payments specified in paragraphs (A) and (D) shall be paid within sixty days from the date of issuance of this order.

(F) The payments specified in paragraph (B) shall be paid on or before October 1, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP62-14; THE MANUFACTURERS LIGHT & HEAT COMPANY, DOCKET NO. CP61-155

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBIC CONVENIENCE AND NECESSITY

(Issued February 6, 1963)

This matter is before us upon a motion made upon the record on January 8, 1963, by Tenessee Gas Transmission Company (Tennessee) for disposition of the application at Docket No. CP62-14 as a noncontested proceeding and for omission of the intermediate decision procedure. All parties concurred in such motion.

On July 19, 1961, Tennessee, a Delaware corporation with its principal place of business in Houston, Texas, filed an application at Docket No. CP62-14, pursuant to Section 7 of the Natural Gas Act, for a temporary and permanent certificate of public convenience and necessity, authorizing Tennessee to transfer to Manufacturers Light and Heat Company (Manufacturers), for the account of United Fuel Gas Company (United Fuel),[1] under Tennessee's Rate Schedule CD-4 in Tennessee's Northern Rate Zone, deliveries of 35,000 Mcf[2] of natural gas per day, which was a part of the contracted volumes of gas Tennessee was then delivering on a long-term basis under its Rate Schedule CD-3 to United Fuel in Tennessee's Eastern Rate Zone. Such transfer was proposed for each six-month period, November 1 through April 30, for a term of years coextensive with that of the gas sales contract between Tennessee and United Fuel, dated May 4, 1959.[3] Tennessee alleged that, because of the way its system is designed and operated, it could make the transfer of deliveries during the six winter months without construction of any additional facilities, but could not do so during the remainder of the year.

By its application filed at Docket No. CP61-155 on November 25, 1960, as supplemented on February 20, April 10, and July 21, 1961, Manufacturers sought certificate authority to construct and operate 4,000 additional horsepower compressor units at its existing Adaline Compressor Station in Marshall County, West Virginia, and approximately 10.47 miles of 24-inch pipeline in several sections, replacing corresponding sections of 16-inch pipeline, on Manufacturers' Line No. 65 in the western part of Allegheny, and adjoining portions of Washington and Beaver Counties, Pennsylvania, all at an estimated cost of $2,387,000. These facilities were for the purpose of receiving Manufacturers' increased 1961-1962 gas requirements into its system from United Fuel.

---

[1] United Fuel and Manufacturers are affiliated corporations, both being 100%-owned subsidiaries of the Columbia Gas System, a holding company.

[2] All volumes herein are stated at a pressure base of 14.73 psia unless otherwise noted.

[3] Tennessee was previously authorized to sell and deliver to United Fuel a contract demand of 544,680 Mcf of natural gas per day under a contract dated May 4, 1959, which continues until November 1, 1979, and thereafter until terminated by either Seller or Buyer upon 12 months prior written notice. 76,500 Mcf of this daily quantity is delivered to United Fuel in Tennessee's Central Rate Zone and 468,180 Mcf is delivered in Tennessee's Eastern Rate Zone. Tennessee has been previously authorized to deliver to Manufacturers, in Tennessee's Northern Rate Zone, a contract demand of 30,600 Mcf of natural gas per day under a contract dated January 28, 1959. Tennessee has also previously been authorized to transport for Manufacturers up to 113,371 Mcf of natural gas per day which Manufacturers purchases from producers in Texas. Of this amount, 36,871 Mcf per day is delivered in Tennessee's Eastern Rate Zone and the balance, 76,500 Mcf, is delivered in Tennessee's Northern Rate Zone.

In the July 21, 1961, amendment to its application in Docket No. CP61–155, Manufacturers stated that, due to estimated increases in peak day requirements for the 1961–1962 winter, of 47,500 Mcf over those contained in its original application, it would be necessary for Manufacturers not only to construct those facilities for which certificate authority was originally sought but that, without the transfer of deliveries by Tennessee as proposed in CP62–14, it would also be necessary for it to construct twenty miles of 20-inch pipeline loop on its Line No. 1740, north of Glenville, West Virginia, at an estimated cost of $1,900,000.[4] Manufacturers further indicated that the transfer of deliveries as proposed by Tennessee in Docket No. CP62–14 would obviate construction of this additional 20 miles of pipeline loop.

By letter dated August 18, 1961, the Commission granted Tennessee temporary authorization to make the proposed transfer of deliveries to Manufacturers, commencing November 1, 1961, as requested in Docket No. CP62–14.

By Notice issued November 8, 1961, the Commission scheduled a hearing for December 18, 1961, in Docket Nos. CP61–155 and CP62–14.

At the hearing held on December 18, 1961, all parties present, and the Commission Staff, agreed that permanent certificates of public convenience and necessity should be issued to Tennessee and Manufacturers as applied for and that a condition should be attached thereto requiring Manufacturers to reimburse United Fuel for the net additional cost of purchasing said 35,000 Mcf of natural gas per day at Tennessee's Northern Zone rate over that of purchasing such volume at Tennessee's Eastern Zone rate.[5] It was further stipulated that the reimbursement arrangement should be filed with the Commission by United as a part of its Volume No. 2 FPC Gas Tariff. It was agreed that such hearing should recess to January 15, 1962, in order to allow Staff Counsel opportunity to prepare and serve upon the parties proposed findings and conclusions which would serve as the stipulation of all parties.

By its Findings and Order Issuing Certificates of Public Convenience and Necessity, issued February 20, 1962, 27 FPC 384, the Commission authorized construction and operation of the facilities applied for by Manufacturers in Docket No. CP61–155 (this did not include the pipeline loop described in the July 21, 1961, amendment to the application at Docket No. CP61–155, which the transfer of deliveries in Docket No. CP62–14 would render unnecessary). The Commission further authorized Tennessee to transfer deliveries of 35,000 Mcf of natural gas per day as proposed in Docket No. CP62–14, for two winter periods ending April 30, 1963. The Commission, however, stated that it had two questions concerning this arrangement: (1) Whether or not the reimbursement of United Fuel by Manufacturers would result in Manufacturers paying United Fuel for a service

[4] In the original application, Manufacturers had estimated its 1961–62 increase in peak day requirements to be 32,200 Mcf per day. It proposed to meet these from its Victory Storage Field. The facilities for which authorization was sought were claimed by Manufacturers to be necessary for injections of gas into this storage field. In its July 21, 1961, amendment to the application, Manufacturers estimated its increased 1961–1962 market requirements to be 79,500 Mcf and proposed to meet this increase by the transfer of 35,000 Mcf per day proposed by Tennessee and the balance from the Victory Storage Field.

[5] The applicants had not proposed that Manufacturers reimburse United for this additional cost. It developed at the hearing that this was the only feature of the applications which was objected to by any party. The intervenors purchasing gas from United contended that, since the proposed transfer was solely for the benefit of Manufacturers, Manufacturers, not United, should bear such increased cost. It was shown that United could deliver all of Manufacturers' increased 1961–1962 peak day requirements without installation of any additional facilities and that, thus, only Manufacturers would receive any benefit from the proposed transfer.

which United Fuel will not render; and (2) whether the reimbursement arrangement between United Fuel and Manufacturers could properly be contained in a Volume No. 2 tariff filing by United Fuel. The Commission remanded the proceeding to the Examiner to determine whether or not the proposed transfer of deliveries should be continued on a long-term basis.

On March 22, 1962, Tennessee filed a motion for reconsideration of the Commission's February 20, 1962, order or, in the alternative, for the Commission to define the issues to be tried in the remanded proceeding more specifically. On May 1, 1962, 27 FPC 900, the Commission issued its order specifying the issues to be developed at the hearing upon the remanded proceeding which it set to convene upon June 4, 1962.[6]

On May 31, 1962, pursuant to motion filed by Manufacturers and United on May 24, 1962, the Examiner extended the date for reconvening of the formal hearing to July 25, 1962, and provided that a prehearing conference be held on June 4, 1962, in lieu of the formal hearing previously scheduled for such date.

On June 5, 1962, the Examiner issued an order providing that all parties supporting the application should serve their direct testimony and exhibits by June 26, 1962; that Staff and all parties opposing the application should state their respective positions and serve their answering testimony and exhibits by July 16, 1962; and, that further pretrial conference for the purpose of either settling or joining the issues be held on July 25, 1962. Thereafter, upon motions and requests made at various times by either Tennessee, Manufacturers, or United, and not opposed by any party, the above dates were finally extended to November 1, November 29 and December 5, 1962, respectively, by Examiner's notices issued June 28, July 26, September 4, and October 10, 1962. In each instance, the extension was granted because it appeared that the same might result in a settlement of the issues involved in the proceeding.

On November 1, 1962, Manufacturers served upon all parties the prepared testimony, and four related exhibits[7] of Mr. H. R. Weitzel, Vice President and Chief Engineer of Manufacturers and other companies of the "Pittsburgh Group" of Columbia Gas System Companies. On the same date United Fuel served the prepared testimony of Mr. John P. Cornell, Vice President (Rates and

---

[6] This order states, in pertinent part that:

> The Commission in its order of February 20, 1962, said that it appeared to the Commission that there was a serious question as to whether the granting of the applications would not place Manufacturers in the position of making payments to United for a service which United did not render. . . .
>
> . . . However, for the purpose of clarification of the issues, the Commission will indicate in the ordering paragraph herein the issues to be tried at the hearing to determine the propriety of the charge to be made by United (to Manufacturers).
>
> *The Commission orders:*
>
> The above-docketed proceedings be and the same are hereby set for further hearing . . . and the issues to be developed upon such hearing shall include the following: (1) Does United in fact render a service for which it should be reimbursed? (2) If United renders a service, is the proposed basis of reimbursement just and reasonable? (3) Does the arrangement properly fall within the scope of a Volume No. 2 tariff filing, or is it in conflict with Section 154.52 of the Commission's Regulations? (4) Does the arrangement improve the reliability of service and offer additional flexibility in operating techniques to the integrated Columbia System? (5) Does the arrangement represent an accommodation to the Columbia System, resulting in benefiting the System as a whole, rather than primarily benefiting Manufacturers?

[7] Exh. #1—System Map of Manufacturers; Exh. #2—Flow Diagram of portion of Manufacturers' System for 1963–64 winter without continuation of transfer; Exh. #3—same, with continuation of transfer; and Exh. #4—annual cost of service for 23.88 miles of 26-inch loop of Manufacturers' main line north of the Glenville connection with United Fuel (Line #1740).

Depreciation Departments) of United Fuel and the other "Charleston Group" companies of the Columbia Gas System.

No other exhibits were filed by any party.

At the prehearing conference held on December 5, 1962, Staff Counsel stated that the Commission's Staff had examined the prepared testimony and exhibits served by Manufacturers and United Fuel and, after consideration of such evidence and the evidence previously in the record, desired to make an alternative proposal which, he believed, would settle all issues in the proceedings.

Staff Counsel proposed that Tennessee render a transportation service to Manufacturers of 35,000 Mcf per day (34,314 Mcf @ 15.025 psia), for the months of November through April of each year, from Tennessee's connections with United Fuel in its Eastern Rate Zone to Tennessee's connection with Manufacturers near Unionville, Pennsylvania, in its Northern Rate Zone. Under Staff's proposal, Tennessee would bill Manufacturers directly for the transportation service at a rate equal to the difference between the rates contained in Tennessee's T–3 and T–4 Rate Schedules.[8] Tennessee would file, as a special Volume 2 filing, the contract between Tennessee and Manufacturers, providing for this service. Manufacturers would be billed by United Fuel under its CDS–1 Rate Schedule for the gas to be transported for Manufacturers by Tennessee and United Fuel would continue to purchase the 468,180 Mcf of contract demand gas presently under contract with Tennessee in Tennessee's Eastern rate zone.

Staff Counsel further pointed out that, upon the basis of the settlement agreement for all of Tennessee's presently outstanding rate proceedings, Staff's proposal will result in a cost to Manufacturers of $20,650 per year less than would be incurred for transfer of 35,000 Mcf per day of United's contract quantity to Manufacturers under Tennessee's CD Rate Schedules.

All parties present, except United Fuel and Manufacturers, agreed to accept the Staff's alternate proposal as the basis for settling all issues in this proceeding and agreement to disposition of the matter under the most expeditious means possible. The prehearing conference was recessed to December 17, 1962, at which time it was to reconvene for the purpose, if possible, of agreeing upon the mechanics to effectuate Staff's proposal and the procedural steps which would constitute the most expeditious means of disposing of the proceeding.[9]

At the prehearing conference on January 8, 1963, all parties present stipulated and agreed that the prepared testimony and exhibits of H. R. Weitzel and John P. Cornell, served upon the parties on November 1, 1962, would be received into evidence by stipulation of the parties and that the presence of such witnesses would be unnecessary. This evidence is now part of the record in these proceedings. All parties waived cross-examination of witnesses Weitzel and Cornell.

All parties concurred in the motion of Tennessee's counsel to amend the application in Docket No. CP62–14 to conform to the Staff proposal of December 5,

[8] Under the settlement agreement relating to all of Tennessee's outstanding rate proceedings, recently approved by the Commission in Docket No. G–11980, *et al.*, the difference between Tennessee's T–3 and T–4 rates—the rates to be charged for the transportation service—will be 38¢ per Mcf of billing demand per month plus 2.1¢ per Mcf of commodity at 15.025 psia. Although not a part of Staff's proposal, Tennessee and Manufacturers propose that the agreement to be submitted to the Commission contain a provision for a 66⅔ minimum take-or-pay-for commodity charge.

[9] By letter dated December 14, 1962, counsel for Tennessee, on behalf of Tennessee, Manufacturers, and United Fuel, requested and was granted an extension to January 8, 1963, for reconvening of the prehearing conference. He advised the Examiner that Manufacturers and United Fuel had advised him that they were willing to accept Staff's proposal and that the three companies felt that, by taking time to negotiate the contract for the transportation service contemplated by Staff's proposal, prior to reconvening of the prehearing conference, the proceeding could be concluded at such prehearing conference.

1962. All parties likewise concurred in the motion of Tennessee's counsel for omission of the intermediate decision procedure and waived their rights to file briefs and to have oral argument.

All parties stipulated and agreed that Tennessee should be granted a certificate of public convenience and necessity in Docket No. CP62–14 in accordance with the Staff proposal stated on the record December 5, 1962, authorizing Tennessee to transport to Manufacturers, in Tennessee's Northern Rate Zone, 35,000 Mcf of natural gas per day from United Fuel, in Tennessee's Eastern Rate Zone, during each winter period November through April. It was further stipulated and agreed that a condition should be inserted in the certificate to provide that any certificate issued herein should not become effective until Tennessee shall file with the Commission, as part of its FPC Gas Tariff, Fourth Revised Volume No. 2, an executed contract satisfactory to the Commission which effectuates Staff proposal of December 5, 1962.

The Commission finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 12, 1947, in Docket G–910, 6 FPC 777.

(2) The proposed transportation and delivery of a specified maximum quantity of 35,000 Mcf of natural gas per day by Tennessee from Tennessee's connections with United Fuel in Tennessee's Eastern Rate Zone to its connection with Manufacturers at Unionville, Pennsylvania, in Tennessee's Northern Rate Zone, in accordance with the Staff proposal set forth on the record December 5, 1962, as recited above, is required by the public convenience and necessity and a certificate therefor should be issued.

(3) Tennessee is able and willing to do the acts and perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) Public convenience and necessity require that the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.20) should attach to the certificate hereinafter issued, and to the exercise of the rights granted thereunder.

(5) Public convenience and necessity requires that the certificate hereinafter issued be conditioned to become effective upon the filing by Tennessee, as a part of its FPC Gas Tariff, Fourth Revised Volume No. 2, of a contract between Tennessee and Manufacturers satisfactory to the Commission.

(6) Tennessee having requested the omission of the intermediate decision procedure, with all parties concurring therein, and all the requirements of Section 1.30(c)(1) (18 CFR 1.30(c)(1)) of the Commission's Rules of Practice and Procedure having been satisfied, sufficient cause exists for the Commission forthwith to render its final decision in the instant proceeding.

The Commission orders:

(A) The motion by Tennessee to omit the intermediate decision in these proceedings should be and hereby is granted for the reasons set forth above.

(B) A certificate of public convenience and necessity be and the same is hereby issued to Tennessee Gas Transmission Company, authorizing it to transport for and deliver to the Manufacturers Light and Heat Company at Tennessee's Unionville delivery point, in Tennessee's Northern Rate Zone a specified maximum quantity of 35,000 Mcf (@ 14.73 psia) of natural gas per day from United Fuel Gas Company, in Tennessee's Eastern Rate Zone, during

each period November 1 through April 30 for the term set forth in the transportation contract to be filed for Commission approval.

(C) The general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of the certificate issued in paragraph (B) hereof.

(D) The certificate herein issued in paragraph (B) shall become effective upon the filing by Tennessee Gas Transmission Company, as a part of its FPC Gas Tariff, Fourth Revised Volume No. 2, of a contract between Tennessee and Manufacturers satisfactory to the Commission, which will incorporate Staff's proposal of December 5, 1962, set forth above.

OPINION NO. 378

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NOS. G–12446 AND G–12447; CONTINENTAL OIL COMPANY, DOCKET NO. G–12432

OPINION AND ORDER ON APPLICATION FOR CERTIFICATE; DETERMINING JURISDICTION, DEFERRING DECISION AND REQUIRING FURTHER FILINGS

(Issued February 6, 1963)*

Syllabus

1. Commission jurisdiction extends to sale of gas whether technically in form of leasehold transactions or otherwise. P. 253.
2. Commission *rejects* argument that jurisdictional issue has been settled; *states* it is one of the critical public convenience and necessity issues available for reconsideration as result of Court remand. P. 253.
3. Contention that order reopening proceedings failed to specify jurisdictional issue is *rejected*. P. 253.
4. Transfer of gas by producers to pipeline for resale in interstate market is jurisdictional; fact that it was sold in bulk rather than Mcf basis does not change nature of sale. P. 254.
5. Distinguishing *Panhandle* case, Commission *holds* it has jurisdiction over in-place sale of Rayne Field gas to Texas Eastern. P. 255.
6. *Concluding* instant sale is jurisdictional Commission *notes* any other result would: (1) exalt form over substance, (2) give greater weight to technicalities of draftsmanship than achievement of purposes of the Act, and (3) impair its ability to control price received for gas sold to pipelines in interstate commerce. P. 255–256.
7. Control limited to approving costs of gas to pipeline is not effective way to regulate producer prices because, in large, pipeline must be allowed to pass its purchased gas cost to ultimate consumer. P. 256.
8. While all gas purchases on bulk basis are not nesessarily contrary to public interest, Commission objects here to the attempt to disguise transaction which in effect is sale of gas, by casting it in form of a sale of leases with provisions making it difficult, if not impossible to subject price thereof to regulatory control. P. 257.
9. Upon remand, Commission *determines* jurisdiction; *defers* decision on application for certificate of public convenience and necessity under Section 7, of the Natural Gas Act, and *requires* further filings by pipeline and its suppliers. P. 258.

---

*Initial decision appears on P. 259. Order granting rehearing issued April 2, 1963, 29 FPC 692. Modified and affirmed; reconsideration denied, by Opinion No. 378–A and Order issued July 12, 1963, 30 FPC 153. Reversed and remanded, *M. H. Marr* v. *F.P.C.*, 336 F. 2d 320 (CA5–1964). Petition for *certiorari* filed, November 3, 1964.

Commissioner O'Connor *concurring.*

Commisisoner Woodward *not participating.*

Jack D. Head, W. D. Deakins, Jr., Keith M. Pyburn, Joseph F. Weiler and *Martin L. Friedman* for Texas Eastern Transmission Corporation.

Edwin F. Russell and *Harry G. Hill, Jr.*, for the Brooklyn Union Gas Company.

J. Harry Mulhern, Edward S. Kirby, Fred M. Broadfoot, James R. Lacey and *William R. Duff* for Public Service Electric and Gas Company.

George P. Lewnes for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SWIDLER, *Chairman:* These proceedings relate to the supply of gas from the Rayne Field in Louisiana to Texas Eastern Transmission Corporation and arose from applications filed by Texas Eastern and Continental Oil Company for certificates of public convenience and necessity under Section 7 of the Natural Gas Act. The proceedings are before us after remand of a prior order by the Court of Appeals,[1] further hearings, a decision of the presiding examiner issued June 29, 1962, and exceptions by several of the parties. The case was argued orally on November 29, 1962.

The proceedings are the subject of an involved history. Texas Eastern, which is a natural-gas company owning and operating an interstate natural gas transmission system extending from Texas to the Philadelphia-Newark area, executed gas purchase contracts on February 1, 1957, with Continental, M. H. Marr, Sun Oil Company and General Crude Oil Company to purchase their natural gas production in the Rayne Field in Acadia Parish, at an initial price of 23.9 cents per Mcf including state taxes of 1.3 cents per Mcf. On April 22, 1957, Texas Eastern filed its application seeking a certificate authorizing it to construct and operate a 2200 horsepower compressor station and 22 miles of 14-inch pipeline to transport natural gas from the Rayne Field to Opelousas, Louisiana, where the gas was to be delivered into its pipeline system. At about the same time certificate applications were filed by Continental and the other producers. After a hearing the examiner issued a decision granting unconditioned certificates of public convenience and necessity, and exceptions were filed.

Before the Commission had acted on the exceptions the Court of Appeals in *P.S.C.* v. *F.P.C.*, 257 F. 2d 717 (CA3) [2] reversed an order of the Commission granting unconditioned certificates for sales of natural gas from off-shore Louisiana at 22.4 cents per Mcf on the ground that the price had not been justified. Thereafter the producers in the present proceeding requested withdrawal of

[1] *P.S.C. of N.Y.* v. *F.P.C.*, 287 F. 2d 143 (CADC).

[2] Affirmed as *Atlantic Refining Co.* v. *P.S.C.*, 360 U.S. 378, the *CATCO* case.

their applications for sales at a somewhat higher initial rate and Texas Eastern filed a petition to reopen the hearing and to amend its application to reflect a change in its plan for acquiring the Rayne Field gas.

Under the new plan the facilities to be built by Texas Eastern would be essentially the same as under the previous plan and the same volumes of gas would be flowing into its system. The difference is solely in the contractual arrangements. Texas Eastern would acquire the lease-hold interests in the reserves which the producers had formerly committed to the gas purchase contracts with Texas Eastern. To carry out the plan the four Rayne Field producers, Continental, Sun, Marr and General Crude entered into a contract designated "Lease Sale Agreement" dated December 4, 1958, with Louisiana Gas Corporation, an affiliate of Texas Eastern. Since by a simultaneous contract Texas Eastern was to have the right to acquire the title to the leases from Louisiana Gas, we shall refer to Texas Eastern as the real party in interest. Under the Lease Sale Agreement, and attached assignment Texas Eastern was to make an initial cash payment of $12,420,500 and a payment of 16 annual promissory notes amounting to $121,975,200, altogether totalling $134,395,700. On their part the four producers would convey to Texas Eastern all gas rights, wells and related equipment down to the base of what is called the Nodosaria A Sand.[3] The producers would reserve their interest in oil and other minerals and a production payment covering all the liquids to be extracted from the gas. The Agreement is subject to certain conditions precedent including a tax ruling in favor of the producers that the sale of the leasehold interests would be considered a long-term capital gain and the issuance of a certificate of public convenience and necessity to Texas Eastern that would enable it to take and transport the gas.

While there is controversy in the briefs in the present stage of the proceeding over the extent of the Rayne Field reserves, they are known to be of substantial size. Texas Eastern estimates production to be 924,678 Mmcf in the years 1961 through 1989. Based on total recoverable reserves of 990,000 Mmcf Texas Eastern acquired approximately 79 percent under the original leasehold acquisition transaction in 1958. Since that time Texas Eastern has acquired the interests of minority leaseholders bringing its total percentage interest in the Rayne Field reserves up to approximately 81.5 percent. As to the remaining gas, mostly royalty gas, Texas Eastern pays for it on the basis of 22.6 cents per Mcf including the Louisiana severance tax of 2.3 cents per Mcf.

Texas Eastern's request for reopening the proceeding to take into account its lease purchase plan was granted, and on June 23, 1959, the Commission in Opinion No. 322, 21 FPC 860, issued an unconditioned certificate to Texas Eastern for its proposed facilities. In its opinion the Commission discussed the lease sale arrangement, and held that the record in the case amply supported the conclusion that the elements of public convenience and necessity were satisfied by Texas Eastern's project without examining the cost to Texas Eastern of the Rayne Field leases. It noted "Texas Eastern has not filed an application for a certificate authorizing the acquisition of the Rayne Field leases and we have no authority to issue such a certificate" (21 FPC at p. 864).

In its decision of December 8, 1960, the reviewing court[4] noted that the language and tenor of the Commission's opinion appeared to confer general approval upon the terms of the acquisition arrangement and to this extent was unsupported by substantial evidence. The court thought it of "no importance here that the transactions by which Texas Eastern proposes to acquire the gas

[3] The base is at 13,650 to 13,890 feet.

[4] *P.S.C.* v. *F.P.C.*, 287 F. 2d 143 (CADC).

will themselves be, by virtue of a change in form, beyond the regulatory control of the Commission." The court indicated that the Commission could regulate the purchaser regardless of the status of the seller and added:

> Two courses are open to the Commission. It may, by clarification of the order presently under review, expressly disclaim any approval of the price to be paid for natural gas by the applicant. See *Kansas Pipe Line and Gas Co., et al., supra*, note 4. Or it may reopen the record in the certificate proceeding to permit Texas Eastern to establish by adequate evidence that the acquisition costs which it proposes to incur will be consistent with the public convenience and necessity.

As a result of the remand the Commission issued an order on July 14, 1961, 26 FPC 167, in which it found that the first course enumerated by the court would leave unsettled matters of public importance and would provide inadequate protection to the public. It thereupon reopened the proceedings for the purpose of determining:

> (1) Whether the public convenience and necessity require that the certificate issued in these proceedings by our order of June 23, 1959, and set aside by the Court of Appeals, be reissued in whole or in part; and also whether the cost of the Rayne Field gas was out of line, whether the proposal was in the public interest even if the cost was out of line, and whether Texas Eastern should cease operating the Rayne Field facilities or exclude them from its costs.

Hearings were held in October, November and December of 1961, and the examiner issued his decision June 29, 1962. The examiner was of the opinion that the Commission was without jurisdiction over the Rayne Field lease and leasehold acquisition and the natural gas thereunder until the gas was connected to an interstate pipeline or was dedicated to interstate commerce, but that the Commission could regulate the purchaser of the gas, Texas Eastern, and determine at what price the public convenience and necessity required dedication. After considering the evidence he concluded that it was virtually impossible to determine the future costs to Texas Eastern for the Rayne Field service since they were predicated upon assumptions and estimates. He therefore turned to a consideration of the in-line price as of April 22, 1957, when, he said, the gas was dedicated to the interstate market. He found that the initial price allowed to Texas Eastern for the Rayne Field gas in interstate commerce should be conditioned at 18.5 cents per Mcf, exclusive of taxes, at 15.025 psia, and issued a certificate to Texas Eastern so conditioned. He also required that the company keep separate accounts for the Rayne Field costs, so that the costs of this gas could be identified in any future rate proceedings.

Exceptions to the decision were filed by Texas Eastern, the United Gas Improvement Company (UGI), Philadelphia Electric Company and our staff.

The issues which emerge from the record in this proceeding, are whether we have jurisdiction over the lease sale arrangement, whether the arrangement is required by the public convenience and necessity, and what is the appropriate disposition to be made at this stage in the proceedings.

JURISDICTION

In determining whether to grant a certificate to Texas Eastern the cost of its gas supply is of obvious importance. If at the time we are considering a pipeline's application for a certificate we have before us the applications of producers to sell gas to the pipeline we can, of course, consider the producers' proposed initial price and can condition their certificates appropriately. In the present case Texas Eastern contends, and the examiner agrees, that we do not have jurisdiction over the acquisition of the gas supply because what was to be a sale of gas has been converted into a sale of leases, and we are left, it is said,

only with the jurisdiction to disallow a portion of Texas Eastern's cost of its gas supply. We do not agree that there is such a gap in our jurisdiction under the Natural Gas Act. As will be developed below, our jurisdiction, under the circumstances of this case, extends to the sale of gas to Texas Eastern whether technically in the form of leasehold transaction or otherwise.

Before going into the question of jurisdiction we may note that Texas Eastern argues that this question has been settled and is not before us. Texas Eastern disagrees with the conclusion of the staff and the interveners that the Commission is free to re-examine the jurisdictional question related to the so-called Rayne Field lease acquisition. On our part we agree with the conclusions of the interveners and the staff.

In our previous opinion the Commission merely noted without discussion that we had no authority to issue a certificate for the acquisition of the leases (21 FPC at p. 864). The court, again without discussion, noted that the "Commission has been held to lack jurisdiction over gas leases" citing *F.P.C.* v. *Panhandle Eastern Pipe Line Co.*, 337 U.S. 498. It is apparent the issue was hardly considered in the earlier phase of this proceeding; in our opinion, it may be considered at this stage if for no other reason than that the issue was given by passing mention by the Commission and the Court. In *N.L.R.B.* v. *Baltimore Transit Co.*, 140 F. 2d 51, 55 (CA4), *certiorari* denied 321 U.S. 795; it was said that "An administrative agency, charged with the protection of the public interest, is certainly not precluded from taking appropriate action to that end because of mistaken action on its part in the past."

In *F.C.C.* v. *Pottsville Broadcasting Co.*, 309 U.S. 134, an order of the Federal Communications Commission denying an application for a radio station license was reversed because the Commission had misunderstood state law. Upon remand the F.C.C. set argument on the application with two rival applications that had been filed and heard subsequently. Upon the objection of Pottsville and review of this procedural issue the Supreme Court held that when the Court of Appeals had laid bare the error with respect to state law, the Commission was not limited to correcting this error but "was again charged with the duty of judging the application in the light of 'public convenience, interest or necessity'" (309 U.S. at p. 145). One of the critical public convenience and necessity issues which became available for reconsideration by this Commission when its earlier decision was reversed and remanded for "further proceedings not inconsistent" with the Court of Appeals opinion, was the underlying question of its jurisdiction over the lease acquisition.

Texas Eastern also contends that apart from what we could have done on remand, we failed to specify the jurisdictional issue in reopening the proceeding. In our order of July 14, 1961 (26 FPC 167), we reopened the record to permit Texas Eastern, in the words of the Court of Appeals, "to establish by adequate evidence that the acquisition costs which it proposes to incur will be consistent with the public convenience and necessity". We then added:

> It is also necessary and reasonable that we define, *but not necessarily limit*, the issues and prescribe procedures, as hereinatfer ordered, so as to guide the course of the reopened proceeding. [Italics added.]

We thereupon listed some of these issues including the issue, as quoted earlier in this opinion, "Whether the public convenience and necessity require that the certificate—be reissued in whole or in part." By the wording of this order we were not necessarily providing for a further hearing with respect to all issues. The issue of our jurisdiction is fundamental and could not be waived,[5] but in any event the jurisdictional issue is comprehended in the

[5] Compare *United States* v. *Corrick*, 298 U.S. 435, 440; *Mitchell* v. *Maurer*, 293 U.S. 237, 244.

issue whether the public convenience and necessity require that the certificate be reissued. The jurisdiction issue was raised and briefed before the examiner, and was briefed and argued before the Commission.

In considering the question of the Commission's jurisdiction over the in-place sale of the Rayne Field gas to Texas Eastern, it must be kept in mind that the original sales contract between the producers and Texas Eastern was clearly subject to FPC jurisdiction and not subject to state regulation. The changes made in the terms of the agreement would not appear to confer state jurisdiction over this interstate transaction. In such a situation, the Supreme Court has stated that it is "not inclined to approach the problem negatively, thus raising the possibility that a 'no man's land' will be created. Compare *Guss* v. *Utah Labor Board*, 353 U.S. 1 * * *. That is to say, in a borderline case where congressional authority is not explicit we must ask whether state authority can practicably regulate a given area and if we find that it cannot, then we are impelled to decide that federal authority governs."[6] Congress "meant to enact a comprehensive and effective regulatory scheme",[7] . . . "to protect consumers against exploitation at the hands of natural gas companies."[8]

We have jurisdiction over this transaction because by it the producers transferred natural gas to Texas Eastern for resale by Texas Eastern in the interstate market. The fact that the gas, which had been developed to an extent where reasonable estimates could be made as to the available reserves, was sold in bulk rather than on a per Mcf basis does not change the nature of the sale. Although in form a lease transfer, we agree with the staff that we should look beyond the label of the transaction to its essence.[9] The contract provides for a downpayment and 16 annual promissory notes in return for the transfer of leasehold rights plus equipment, but the effect resembles the ordinary sale of gas because of the following features among others:

(1) Only gas in particular strata is conveyed; and the producers retain their interest in oil and other minerals;

(2) In effect the transaction is for the sale of stripped gas inasmuch as the producers are to receive a production payment from Texas Eastern from the sale of natural gas liquids;

(3) While the payment for the leases is represented by notes and spread over a 16-year period, the notes have an acceleration clause by which payment is accelerated if production is increased, so that Texas Eastern's payments would be geared to production;

(4) By a management agreement dated July 27, 1959, Continental agrees to operate the field, including drilling wells and managing all wells and equipment, and to deliver to Texas Eastern specified minimum daily quantities of gas; Texas Eastern will reimburse Continental for its expenses in operating the field but the assignment of the leases shows that the costs of operating the leases will be defrayed out of the production payments to which Continental is entitled;

(5) It is Louisiana Gas, not Texas Eastern which is liable on the notes to the producers, so that the true purchaser of the gas is not bound by the principal obligation of the lease sale transaction.

In opposition to the claim of jurisdiction Texas Eastern cites *F.P.C.* v. *Panhandle Eastern Pipe Line Co.*, 337 U.S. 498, which is also cited by the

[7] *Panhandle Eastern Pipe Line Company* v. *F.P.C.*, 332 U.S. 507, 520.

[8] *Sunray Mid-Continent Oil Company* v. *F.P.C.*, 364 U.S. 137, 147.

[9] Of course, we are not concerned with the transfer of other property rights, if they are involved. Nor are we concerned with the operation of the producing properties, wells or the equipment for producing and gathering natural gas.

Court of Appeals in the present proceeding. In that case Panhandle transferred substantial gas leases to a subsidiary, Hugoton Production Company, which was to sell the gas in intrastate commerce, and subsequently spun off the Hugoton stock to the Panhandle stockholders. The Court held that the Commission did not have jurisdiction over the transaction and denied it an injunction to prevent the transfer. Quoting from Section 1(b) of the Act which excludes from our jurisdiction "the production or gathering of natural gas" the Court concluded that "leases are an essential part of production" (337 U.S. at p. 505), that Congress "excluded the Commission from exercising any direct control or regulation over the actual production and gathering of natural gas," (337 U.S. at p. 507) and that "the transfer of undeveloped gas leases" was "an activity related to the production and gathering of natural gas and beyond the coverage of the Act" (337 U.S. at 515).

We think that the present case is distinguishable from that involved in the *Panhandle* case. In that case the leases were undeveloped so that the transfer did not resemble a sale of gas as did the sale of developed leaseholds here. Furthermore, the reserves here are connected or are to be connected to an interstate pipeline and are to be sold in interstate commerce while those in *Panhandle* were transferred to a corporation which subsequently sold them in intrastate commerce. Also, in the *Panhandle* case the gas reserves passed entirely out of the control of the seller while here the seller retained rights to oil, gas if found other than in particular strata, production payments for liquids, and management of the field.

Apart from these distinctions, which we think controlling in themselves, the *Panhandle* case was decided in 1949, five years before the Supreme Court held in the *Phillips* case [10] that sales of natural gas by producers in interstate commerce were subject to our jurisdiction. In the *Phillips* case the Court found that sales from producers to pipelines occurred after production and gathering as those terms are used in Section 1(b) of the Act had been completed. However, the Court did not rest its decision on this narrow ground but said that it was the "congressional intent to give the Commission jurisdiction over the rates of all wholesales of natural gas in interstate commerce, whether by a pipeline company or not and whether occurring before, during, or after transmission by an interstate pipeline company." The instant transaction obviously falls within this category aside from any question as to the applicability of *Panhandle* to the transfer of gas leases to intrastate purchasers.

The *Phillips* case has been followed in numerous cases, including *Saturn Oil & Gas Co.* v. *F.P.C.*, 250 F. 2d 61, 68 (CA10), *certiorari* denied 355 U.S. 956, and *Continental Oil Co.* v. *F.P.C.* 266 F. 2d 208, 210 (CA5), *certiorari* denied, 361 U.S. 827, which are of particular interest here. In the *Saturn* case the sales were made at the wellhead. The Court considered that they were made after production but prior to gathering and interpreted the *Phillips* case to hold "that the production or gathering exemption of section 1(b) did not apply to exclude from the jurisdiction of the Commission sales by any producer of natural gas for transportation interstate for resale to the public." In the *Continental* case the sale was made at the top of two valves in the "Christmas Tree" at the wellhead. The Court concluded that "production" was complete before the point of sale, but it is obvious that "gathering" had not been completed.

Thus we conclude that a sale of gas in interstate commerce during the course of production and gathering is subject to our jurisdiction. Likewise, the sale of gas (or reserves) made under the circumstances here involved by the producers

---

[10] *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672. It may be noted that the court in *City of Detroit* v. *F.P.C.*, 230 F. 2d 810 (CADC), *certiorari* denied 352 U.S. 829, pointed out the influence of the *Phillips* case on the procurement of gas supplies.

to Texas Eastern for transportation in its pipeline is a sale of gas for resale in interstate commerce and is subject to our jurisdiction. Any other result would exalt form over substance, would give greater weight to the technicalities of contract draftsmanship than to the achievement of the purposes of the Natural Gas Act, and would impair our ability to control the price received for gas sold to the pipelines in interstate commerce to the detriment of the ultimate consumer. Control limited to approving the costs of the gas to the purchasing pipeline is, of course, not an effective way to regulate producer prices because in the large a pipeline must be allowed to pass on its purchased gas costs to the ultimate consumer or it cannot continue to discharge its public service responsibilities.

THE LEASE SALE

In view of our findings that the in-place sale of the Rayne Field gas reserves to Texas Eastern is subject to our jurisdiction, it is obvious that the proceeding is not in a posture for final disposition at this time. It will now be necessary for the producers to file an application for a certificate of public convenience and necessity pursuant to Section 7 of the Natural Gas Act to obtain Commission approval of the sale of this gas.

It is clear from the record of this case that it is not in the public interest for this Commission to certificate a transaction such as the one presented to us on this record. Having asserted our jurisdiction, the price that the producers will receive under the proposed lease sale arrangements must be subject to the Commission's authority to fix just and reasonable rates. However, the terms of the instant arrangements which contemplate that Texas Eastern would pay the producers a sum of money in cash and then make payments on promissory notes over a 16-year period certainly did not envision adjustments from time to time to comply with FPC rate regulation and it is indeed difficult to envision how we could exercise our regulatory authority within the framework of such an arrangement.

Another consideration which is of importance in determining the type of arrangements for sales by producers to pipelines is the fact that the Commission is now implementing the area approach to producer regulation. Sales under the arrangements herein contemplated could not readily be adjusted to our determination of just and reasonable rates in an area rate proceeding and they would thus escape effective rate regulation.

The record in this proceeding clearly demonstrates the difficulty of attempting to determine a proper price for this gas under the present arrangements. Evidence on average costs per Mcf was presented by Texas Eastern on various assumptions ranging from a low of 18.79 cents per Mcf to 24.34 cents per Mcf at 15.025 psia. These costs include operating expense; depreciation, depletion and amortization; return; and royalties. Texas Eastern, however, objected to the inclusion of certain items such as royalty payments and severance taxes and the staff argued that, because of a number of considerations, including the use of an untested reservoir and an improper estimate of porosity and connate water, the amount of the reserves transferred was exaggerated, so that the cost per Mcf was actually higher. Thus, in order to determine the cost, lengthy hearings would be required and careful consideration would have to be given to factors that should not be involved in a certificate proceeding. Even then the per Mcf price of the gas could not be determined with any reasonable degree of accuracy at this time because many of these factors are based on estimates and forecasts of varying degrees of reliability.

In view of the deficiencies of the lease sale arrangement we are of the opinion that it would serve no purpose to analyze the cost evidence here presented and the objections made to it and that in the exercise of our jurisdiction over the

transaction we should require the formulation of a different means for Texas Eastern's acquiring gas supplies. This does not mean that we must invariably oppose a pipeline assembling its own reserves from whatever source. We recognize that there are frequently advantages in a pipeline owning and operating its gas reserves, and we do not hold that all gas purchases on a bulk rather than a per Mcf basis are necessarily contrary to the public interest. What is objectionable here is the attempt to disguise a transaction which in effect is a sale of gas by casting it in the form of a sale of leases with provisions that would make it difficult if not impossible to subject to regulatory control the price for the sale to an interstate pipeline of this large body of gas.

DISPOSITION OF THESE PROCEEDINGS

We have before us a complicated procedural situation. As will be recalled, Texas Eastern shifted from a straight purchase of gas to the lease sale arrangement. In our prior decision we did not hold that we had jurisdiction over this transaction but, in effect, accepted it as labeled by the parties in granting a certificate to Texas Eastern. The reviewing court, without discussion, agreed with the Commission on the question of jurisdiction, but held that we should either have disclaimed approval of the price under the lease sale or should have examined the justification for the price. We reopened the proceeding largely to obtain further evidence on whether the lease sale was consistent with the public interest. We now find that we have jurisdiction over the sale, and that the transaction is not in the public interest as a way to acquire gas supplies.

In these circumstances the parties should be given ample opportunity to work out new arrangements in the light of the requirements of the Natural Gas Act and our discussion in this opinion. We shall therefore afford Texas Eastern and its suppliers a period of 6 months to complete such arrangements and make the necessary filings with this Commission. This delay would not be detrimental to the public because Texas Eastern is already taking gas from the Rayne Field.[11]

In making the requirement for filing a new arrangement we are not defining our requirements with precision, for we think that in view of the procedural delays and the contractual arrangements that have been made the parties should have considerable freedom to extricate themselves from this complicated situation. However, consistent with our discussion above the lease sale arrangement should be rescinded and the producers, or one producer acting for all, should file rate schedules for the sale of gas to Texas Eastern and corresponding applications for certificates of public convenience and necessity. Texas Eastern, on its part, should file an amended certificate application referring to its purchase of gas. The new contract, of course, would be effective from the delivery of the first gas from the Rayne Field and would be a substitute for the lease sale arrangement now proposed. We do not think it would be inequitable to require this revision, for the Lease Sale Agreement was specifically made subject to the buyer's obtaining a certificate, PSC in the course of the earlier proceedings had expressed its opposition to the lease arrangement as it was constituted, and the court on review did not affirm our granting of a certificate to Texas Eastern.

The Commission further finds:

(1) Continental, Sun, Marr and General Crude are independent producers of natural gas and natural gas companies within the meaning of the Natural

[11] On November 27, 1957, and December 5, 1958, Texas Eastern was granted temporary certificates for part of its proposed facilities, but its permanent certificate for the lateral for the Rayne Field was granted in Opinion No. 322, 21 FPC 860 (issued June 23, 1959) and in effect nullified by the court.

Gas Act as heretofore found by the Commission or by participation in the Lease Sale Agreement discussed herein.

(2) The Lease Sale Agreement referred to above represents sales of natural gas for resale in interstate commerce, which are subject to our jurisdiction under the Natural Gas Act, and such sales, together with the construction and operation of any facilities necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Continental, Sun, Marr and General Crude have not obtained certificates or filed rate schedules in connection with their sales of natural gas subject to the jurisdiction of the Commission as required by Section 4 and 7 of the Natural Gas Act.

(4) Texas Eastern is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued July 7, 1958 (20 FPC 3).

(5) The construction and operation of facilities by Texas Eastern as hereinbefore described, all as more fully described in the application in these proceedings, will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) The construction and operation of facilities subject to the jurisdiction of the Commission as proposed herein by Texas Eastern have not been shown to be required by the public convenience and necessity.

(7) It is appropriate in the administration of the Natural Gas Act that decision on Texas Eastern's application for a certificate of public convenience and necessity be deferred and that further filings be required on the part of Texas Eastern and its suppliers of gas.

The Commission orders:

(A) Decision on Texas Eastern's application for a certificate of public convenience and necessity in the above-entitled proceedings is hereby deferred.

(B) Continental, Sun, Marr and General Crude within six months of the issuance of this order shall make filings of appropriate rate schedules and applications for certificates of public convenience and necessity. Within the same period Texas Eastern shall file a revised application for a certificate to put into effect a new arrangement for the supply of gas to Texas Eastern from the Rayne Field in conformity with this opinion, the public interest and the Natural Gas Act.

(C) Exceptions not granted herein are hereby denied.

Commissioner O'Connor *concurring*, filed a separate statement appended hereto. Commissioner Woodward *not participating*.

O'CONNOR, *Commissioner*, concurring:

While I join in the disposition of this case by the majority, certain differences in reasoning require that I express my position separately.

I agree with the majority for the reasons stated in the Order that the question of our jurisdiction over this sale has not been foreclosed. On that question I conclude, first, that the transaction involves a "sale" of "natural gas" as used in Section 1(b) of the Natural Gas Act. Because of the proved nature of these reserves, we have here, in effect, a sale of a relatively well defined block of gas, as distinguished from the sale of indefinite mineral rights over a given area of land. Being a sale of a defined block of gas, it unavoidably becomes a "sale" of "natural gas" contemplated by the Act. Second, I conclude this transaction is "in interstate commerce" because, and solely because, the necessary effect of

this sale to an interstate pipeline is to place this gas into the stream or pattern of interstate commerce.

I further agree that the case before us must be remanded because in its present form the sale is not susceptible to effective price regulation. The controlling difficulty, I believe, is that the amount of gas being purchased by the pipeline is indefinite, and therefore the ultimate price per Mcf to be charged the consumers cannot be ascertained. Without knowing the Mcf price of this gas, we have no means of determining whether the price paid for it is in the public convenience and necessity. For this reason, I would remand the case for the parties to the transaction to remedy this defect. This can be done by obtaining a guarantee from the producers that the reserves will produce a minimum amount of gas, by obtaining a stipulation from all parties in this case of the minimum reserves, or by producing compelling expert evidence of the minimum figures.

If the transaction is so modified, I believe we will be in a position to effectuate our duties under the Natural Gas Act. It is true that the form of this transaction will still be unusual, and because of this fact it will produce difficulties in techniques of regulation. Particularly, since this transaction contemplates an outright sale of a block of gas for a fixed and certain price, the Commission will have only one occasion to pass on the appropriateness of the price, rather than a continuing jurisdiction to readjust it to changing circumstances. The majority on page 256 of its Order suggests that this difficulty is fatal (although on page 257 it notes that all in-place purchases are not hereby precluded. I thoroughly disagree. There is nothing inherent in a one-shot transaction that precludes effective regulation. All recent regulation of pipeline production has been done on this basis—expenses for outright purchases of undeveloped leaseholds, lands or rights once incurred and approved go into the rate base and are not subjected to continuing adjustments, whether paid for in cash or on an installment basis.

To make this regulatory inconvenience a controlling factor would be to rule out in-place purchases by pipelines since it would eliminate the attraction to producers of receiving a firm price for a completed sale of a defined block of gas. The net effect would be that a pipeline with the staff, facilities, and finances for exploration and development could obtain its own production with all the advantages thereof, but a pipeline not in a position to carry out an exploration program could not obtain its own production by purchasing proven reserves in place. Such a result, I submit, would be violative of the public interest.

INITIAL DECISION

UPON REOPENED PROCEEDINGS UPON REMAND UNDER SECTION 7, NATURAL GAS ACT

(Issued June 20, 1962)

FRAZEE, *Presiding Examiner:* This is a certificate proceeding under Section 7 of the Natural Gas Act.

The historical background of this controversy shows that the Texas Eastern Transmission Corporation (Texas Eastern), a Delaware corporation with its principal place of business in Shreveport, Louisiana, is a natural-gas company owning and operating an interstate natural gas transmission system extending from Texas to the Philadelphia-Newark area.

On February 1, 1957, Texas Eastern executed gas purchase contracts with the Continental Oil Company (Continental), M. H. Marr (Marr), Sun Oil Company (Sun) and General Crude Oil Company (General Crude) to purchase their natural gas production in the Rayne Field, Acadia Parish, Louisiana at an initial price of 23.9¢ per Mcf including state taxes of 1.3¢ per Mcf.

On April 22, 1957, Texas Eastern filed an application[1] with the Federal Power Commission seeking a certificate of public convenience and necessity authorizing it to construct and operate a 2,200 horsepower compressor station and 22 miles of 14-inch pipeline for the purpose of transporting natural gas from Rayne Field to Opelousas, Louisiana, where the gas will be connected to its Beaumont-Koscuisko interstate pipeline system.

Applications for certificates of public convenience and necessity for the sale of natural gas from Rayne Field to Texas Eastern under the aforesaid gas purchase contracts, were filed by Continental[2] on April 17, 1957, Marr[3] on July 15, 1957, Sun[4] on July 17, 1957 and by General Crude[5] on July 22, 1957.

These applications were consolidated and a hearing was held thereon. An initial decision[6] was filed by the Presiding Examiner on April 15, 1958, authorizing the proposals and issuing unconditioned certificates of public convenience and necessity under Section 7 of the Natural Gas Act. Exceptions to the initial decision were filed with the Commission.

Before the Commission acted on the exceptions the Court of Appeals, 3rd Circuit, in the *Public Service Commission of New York* v. *F.P.C.*, (CATCO) 257 F. 2d 717[7] reversed an order of the Commission granting unconditioned certificates of public convenience and necessity for the sales of natural gas from off-shore Louisiana by independent producers at 22.4¢ per Mcf, including tax.

Following the 3rd Circuit decision the producers herein, Continental, Marr, Sun and General Crude, each filed notices of the termination of their sales contracts with Texas Eastern and requested withdrawal of their applications for certificates of public convenience and necessity, which requests were granted by the Commission.

Texas Eastern thereupon filed a petition to reopen the hearing and to amend its application for a certificate of public convenience and necessity to reflect a change in its plan for acquiring the Rayne Field gas. Under the new plan Texas Eastern proposed to acquire the leasehold interests in the reserves formerly committed to the contracts by Continental, Marr, Sun and General Crude.

The petition to reopen was granted, and at the conclusion of the hearing a motion to waive the initial decision was made, which was granted by the Commission.

On June 23, 1959, by its Opinion No. 322, *Texas Eastern Transmission Corporation*, 21 FPC 860, the Commission granted an unconditioned certificate of public convenience and necessity for the compressor station and 22 miles of 14-inch line to connect the Rayne Field gas to the Texas Eastern interstate pipeline at Opelousas. In this opinion the Commission said, at page 861, "The Rayne Field is one of the few large and fully developed gas reserves *not presently committed to and serving a market*" (emphasis supplied). In its Third Supplement to the aforesaid petition to reopen the hearing filed on December 15, 1958, "Texas Eastern advised the Commission that it had acquired the right to purchase the entire working interest of Continental, Marr, Sun and General Crude in the Rayne Field leases, under the terms and conditions of the final Lease Purchase Agreement dated December 4, 1958, which

it filed with the Commisssion," *Cf.* 21 FPC 860, 862. Texas Eastern would thereby acquire "the oil and gas leases and related properties . . . insofar as they apply to the proved reserves" p. 863. The Commission made no inquiry into the cost to Texas Eastern of acquiring the Rayne Field leases and related properties but the Commission did state, at page 864:

> In our judgment, the record in this case amply supports the conclusion that the elements of public convenience and necessity are satisfied by Texas Eastern's modified project, without examining into the cost to Texas Eastern of the Rayne Field leases to the extent advocated . . . . Texas Eastern has not filed an application for a certificate authorizing the acquisition of the Rayne Field leases and we have no authority to issue such a certificate. However, we have considered all the circumstances pertaining to the company's acquisition of the Rayne Field leases and the effects of this transaction on the need and convenience of the public proposed to be served, including the extent and accessibility of this gas supply; the benefits thereof in enabling Texas Eastern to meet consumer demands; the terms and conditions of the lease sale and purchase agreements including the price to Texas Eastern of the gas thereunder; the claimed savings accruing to Texas Eastern from acquiring the leases rather than purchasing the gas under gas purchase contracts; and the other factors present here. And we conclude that the company's modified project, as it would include and rely on the acquisition of the Rayne Field leases, is required by the public convenience and necessity and otherwise meets the requirements of Section 7(e) of the Act.

The Commission went on to say that Texas Eastern, through Louisiana Gas[*] woud pay Continental *et al.* the sum of $12,420,500 in cash upon the issuance by the Commission of a satisfactory certificate of public convenience and necessity to Texas Eastern and Texas Eastern will simultaneously make 16 serial promissory notes to each of the sellers payable over a 16-year period in the total amount of $121,975,200 as the balance of the purchase price for the leases. The notes were to be secured by a mortgage and without interest. The sellers retained a production payment out of the liquids produced with the gas, they also reserve the leasehold rights to all crude oil production and gas which may be produced from below the Nodosaria A Sand. The leases to be conveyed to Texas Eastern were alleged to cover an estimated reserve of 988,771,000 Mcf of natural gas.

The Public Service Commission of the State of New York filed a motion for a rehearing in Opinion 322 in order to "determine upon what price for the acquisition of the Rayne Field leaseholds, public convenience and necessity would require authorization of the related construction herein proposed by Texas Eastern," contending that this is "the Commission's only opportunity to require producer disclosure of the costs associated with this gas and their relation to the sale price" of these leases. 21 FPC 860, 864. The motion was denied and the Public Service Commission of the State of New York filed its petition in the Court of Appeals, D.C. Circuit, for a review of the Federal Power Commission's Opinion No. 322.

The Court of Appeals, D.C. Circuit, on December 8, 1960, in *Public Service Commission of the State of New York* v. *F.P.C.*, 143 F. 2d 143, held the acquisition of the leasehold interest in gas reserves was beyond the jurisdiction of the Commission, nevertheless the pipeline construction project and the transactions by which Texas Eastern will dispose of the gas thus acquired clearly are within

[*] The Louisiana Gas Corporation is a Delaware corporation formed by Texas Eastern for the purpose of acquiring the Rayne Field leases through it.

acquired by Texas Eastern, *was not*, at the time of the acquisition, *connected* the CATCO[9] decision, to inquire into Texas Eastern's acquisition costs based upon the Commission's responsibility to regulate the purchaser (Texas Eastern), regardless of the status of the seller. The order of the Commission in its Opinion 322 was reversed and remanded, the Court stating:

> Two courses are open to the Commission. It may, by clarification of the order presently under review, expressly disclaim any approval of the price to be paid for natural gas by the applicant. See Kansas Pipe Line and Gas Co. *et al.*, *supra* note 4. Or it may reopen the record in the certificate proceeding to permit Texas Eastern to establish by adequate evidence that the acquisition costs which it proposes to incur will be consistent with the public convenience and necessity.

On July 14, 1961, the Commission issued its "Order Reopening Proceeding, Prescribing Procedures and Fixing Date of Hearing," 26 FPC 167. Texas Eastern was afforded the opportunity to "establish by adequate evidence that the acquisition costs which it proposes to incur will be consistent with the public convenience and necessity."[10] The order also defined, but did not limit, the issues as a guide to the course of the reopened proceeding which was to be convened on October 23, 1961. Parties previously permitted to intervene were permitted to intervene in the reopened proceeding.

Hearings were held at which only Texas Eastern offered evidence. At the conclusion of the hearing on December 7, 1961, those desiring to do so were permitted to file briefs, and briefs were filed by Texas Eastern, the Staff, the Public Service Commission of New York, the Public Service Electric and Gas Company, the Long Island Lighting Company, the United Gas Improvement Company and the Philadelphia Electric Company, the latter two filed a joint brief.

The Public Service Commission of New York, in its petition to review the Commission's order in Opinion 322, complained only of the Commission's finding as to the cost of the Rayne Field acquisition, and the Court of Appeals, D.C. Circuit, in its decision made no reference to the feasibility of the proposed construction, nor the market for the Rayne Field gas. These aspects of a certificate application under Section 7 of the Act were not among the issues defined by the Commission to be heard in this reopened proceeding. They are herein considered to have been affirmatively determined by the Commission in its Opinion 322, 21 FPC 860.

Before considering the merits of the Texas Eastern proposal the question of the jurisdiction of the Commission, under the Natural Gas Act, over the acquisition of these Rayne Field leases warrants consideration because the Staff, and at least one of the intervenors, vigorously contend in their briefs the Commission does have jurisdiction over such acquisitions.

Section 1(b) of the Natural Gas Act states, in part,

> The provisions of this Act shall apply to the *transportation* of natural gas *in interstate commerce* to the *sale* in *interstate commerce* of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and *to natural gas companies engaged in such transportation or sale* . . . [Italics supplied.]

This record discloses the Rayne Field leases were acquired by Texas Eastern without the approval of the Commission. This record, as was the first record (21 FPC 860, 861), is clear that the natural gas under the Rayne Field leases

---

[9] See footnote 7, *supra*.

[10] This being the second of the "two courses . . . open to the Commission." *Public Service Commission of New York* v. *F.P.C.*, 287 F. 2d 143, 146.

acquired by Texas Eastern, *was not*, at the time of the acquisition, *connected* with any pipeline transporting natural gas in interstate commerce and, further, the natural gas under the Rayne Field leases acquired by Texas Eastern had not, at the time of the acquistion, been dedicated to any sale in interstate commerce. As far back as 1949, the Commission contended it had jurisdiction over the sale by Panhandle of certain leases and leasehold interests covering an estimated 12 per cent of the total gas reserves of Panhandle but the Supreme Court in *F.P.C.* v. *Panhandle Eastern Pipe Line Company et al.*, 337 U.S. 498, recognized and upheld the traditional industry practice of a natural gas company to buy and/or sell leases and leasehold interests which are "*not connected* with any pipeline system" [emphasis supplied] without the approval of the Commission. From this, it would appear, one of the prerequisites to Commission jurisdiction is that the natural gas under the leases or leasehold interests must first be connected to a pipeline system transporting natural gas in interstate commerce. The Commission argued before the D.C. Circuit, in the following case, it did not have jurisdiction over Texas Eastern's acquisition of the Rayne Field leases and leasehold interests and, in its opinion, the Court of Appeals, D.C. Circuit, in *Public Service Commission of the State of New York* v. *F.P.C.* 287 F. 2d, 143, 145 said ". . . the Commission has been held to lack jurisdiction over gas leases" citing *F.P.C.* v. *Panhandle, supra.* It is contended in the brief's filed herein the Supreme Court reversed its decision in the *Panhandle* case, *supra*, by its decision in *Phillips Petroleum Co.* v. *Wisconsin et al.*, 1954, 347 U.S. 672. Quite to the contrary. In *Phillips* the Supreme Court recognized and reaffirmed the Panhandle prerequisite of the gas being attached to an interstate system of pipelines before the Commission acquired jurisdiction. In *Phillips* the Supreme Court was meticulous in saying, at page 675,

> The gas flows from the producing wells, in most instances at well pressure, through a network of converging pipelines of progressively larger size to one of twelve processing plants, where extractable products and impurities are removed. . . . After processing is completed, the gas flows from the processing plant through an outlet pipe, of varying lengths up to a few hundred feet, to a delivery point where the gas is sold and delivered to an interstate pipeline company. The gas then continues its flow through the interstate pipeline system until delivered in other states.

From this quotation it is obvious the natural gas under consideration by the Supreme Court in its *Phillips* opinion, *supra*, had *previously* been attached to, or *connected with*, an interstate system of pipelines and, because of this connection, the gas flowed in interstate commerce and thereby become subject to the jurisdiction of the Commission.

In applying the principles of the *Panhandle* and *Phillips* opinions, *supra*, to the evidence of record in this hearing, it is concluded the Commission was without jurisdiction over the Rayne Field lease and leasehold acquisition and the natural gas under said leases and leaseholds by Texas Eastern until (1) the gas was connected to an interstate system of pipelines or (2) the gas was dedicated to a sale in interstate commerce.[11] This is not to say, however, that the Commis-

[11] In arriving at this conclusion the Examiner is fully cognizant of an initial decison filed January 8, 1962, in *Tennessee Gas Transmission Company et al.*, Docket No. G–14562 *et al.* Subsequent to the filing of this decision, and before the Commission had acted upon the exceptions filed thereto, amended applications were filed by all parties which materially changed the manner in which the natural gas would be acquired from the producers. These amended filings were accepted by the Commission and upon motions duly filed the proceedings were reopened and remanded for further hearing upon the amended applications. Thus the matters disposed of by the Examiner in his initial decision are no longer before the Commission. See Commission order issued March 26, 1962, in *Tennessee Gas Transmission Company et al.*, Docket No. G–14562, 27 FPC 610.

sion is without jurisdiction to regulate the purchaser of the natural gas, in this case Texas Eastern, and to determine at what price the public convenience and necessity requires the dedication of the Rayne Field gas by Texas Eastern to a sale in interstate commerce for resale to consumers of natural gas in other states. The Courts have been unequivocal in requiring the Commission to give careful consideration to the price paid for natural gas by an interstate system to the end that natural gas may be delivered to the consumer at the lowest reasonable cost, or price.

Following the issuance of the unconditioned certificate of public convenience and necessity by the Commission on June 23, 1959, by its Opinion 322, *supra*, Texas Eastern moved promptly and acquired the Rayne Field leases and leasehold interests on July 27, 1959.[12] In its ordering paragraph (D) the Commission gave Texas Eastern six months' time from the date of the issuance of Opinion 322 within which to construct the facilities proposed and authorized and to place such facilities in operation. Texas Eastern on March 29, 1960, filed its affidavit stating the facilities had been constructed and itemized the costs thereof. Between the date the facilities were placed in operation and January 1, 1961, Texas Eastern took approximately 65,000 MMcf of natural gas into its interstate system from the Rayne Field for resale in interstate commerce.

Because the Commission did not have jurisdiction over the acquisition of these Rayne Field leases and the natural gas thereunder presents no legal barrier to the Commission's jurisdiction over the purchaser of the gas. This jurisdiction attaches upon the acceptance by Texas Eastern of a certificate of public convenience and necessity issued by the Commission upon the application of Texas Eastern for authorization to connect, by the construction and operation of the facilities herein proposed, the Rayne Field gas reserves to its interstate system, which, by its market showing in the previous hearings herein dedicated this particular Rayne Field gas to out-of-state markets for resale for ultimate public consumption. The Act, as above shown, confers jurisdiction upon the Commission over "the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use." And, as was said in *Atlantic Refining Co. et al.* v. *Public Service Commission of New York et al.* (CATCO) 1959, 360 U.S. 378, 389, "Section 7(e) vests in the Commission control over the conditions under which gas may be initially dedicated to interstate use." The Supreme Court, went on to say ". . . once so dedicated" by the acceptance of a certificate of public convenience and necessity "there can be no withdrawal of that supply from continued interstate movement without Commission approval." From the words of the statute—the Natural Gas Act—and the decision of the Supreme Court in the CATCO case, *supra*, there can be no doubt as to the jurisdiction of the Commission over the conditions under which Texas Eastern may transport and sell the Rayne Field gas in interstate commerce.

The conditions under which Texas Eastern may transport and sell the Rayne Field gas remain for consideration. By its order reopening these proceedings the Commission directed Texas Eastern to file (1) an up-to-date reserve and deliverability study for the Rayne Field to include actual production to date, (2) annual production plans for Rayne Field extending through to the estimated

---

[12] Also, on the same date Texas Eastern entered into a management agreement, through the Louisiana Gas Company with Continental Oil Company, one of the sellers and the principal developer of Rayne Field, under which Continental would manage, control, further explore, develop, maintain, produce and deliver the Rayne Field leases and gas for the use and benefit of Texas Eastern, all as shown by Exhibit X–19 herein.

life of the field, (3) an exhibit to show the proposed method of accounting by Texas Eastern for the Rayne Field transaction and all costs incident thereto, and (4) studies showing the cost of making natural gas from Rayne Field available to the Texas Eastern system, including every cost associated, either incurred and/or anticipated, in the acquisition, further development, production, operation and maintenance of Rayne Field which Texas Eastern claims should be considered in future determinations of the justness and reasonableness of Texas Eastern's rates. Thus the first issue to be considered is the Mcf cost of the Rayne Field gas to Texas Eastern, or, in lieu thereof, the initial price at which it may take, as required by the public convenience and necessity, the Rayne Field gas into its interstate transmission system for transportation and resale in interstate commerce for ultimate public consumption. The Commission in its Opinion 322, 21 FPC 860, 867 found, based upon the evidence then before it, the "average cost of producing the Rayne Field gas would be 20.59¢ per Mcf," exclusive of severance taxes.

The evidence by Texas Eastern would show a residue[13] gas reserve in the Rayne Field on January 1, 1961 of 924,678,000 Mcf at 14.73 psia and 60° F.[14] (Ex. X–2, Sh. 1, Col. M, ln. 27), together with an estimated availability commencing January 1, 1961 through the year 1989 of 29,586,356 barrels of condensate and 21,812,852 barrels of plant liquids[15] (Ex. X–2, Sh. 2, Cols. (d) and (e), ln. 30). The witness who sponsored this reserve study had previously testified in the first hearing sponsoring Exhibit M–13, an estimate of the natural gas reserves in the Rayne Field as of January 1, 1959, showing then an estimated reserve, as of that date, of 988,771,000 Mcf (tr. 1813). His testimony now is that four additional wells were drilled in the Rayne Field between January 1, 1959 and January 1, 1961 which resulted in proving up additional reservoirs but had little effect upon the total field reserves. Regarding the difference between his January 1, 1959 estimated reserve of 988,771,000 Mcf and his January 1, 1961 estimated reserve of 924,678,000 Mcf he says is accounted for by the interim production of 65,396,000 Mcf (tr. 1813) (988,771,000—65,396,000=923,375,000 Mcf). Another witness, sponsoring the same exhibit, stated two additional dual completion wells would be required to be drilled in 1962, one dual completion well in 1971 and an additional dual completion well in 1972 in order to complete the development of Rayne Field. During the life of the field certain of the existing wells would have to be recompleted to deeper producing sands to increase the deliverability from that sand. The estimated cost for the drilling of the four dual completion wells was shown to be $2,000,000 (Ex. X–5, p. 2), these costs, in addition to well workover and recompletion costs are to be paid by Texas Eastern since it owns the leases. It appears virtually impossible, from the record, to determine the future costs to Texas Eastern for the Rayne Field since they are predicated upon assumptions and estimates. The costs are actually unimportant since the issue here depends upon the base price at which

---

[13] The term "residue gas," as here used, refers to that gas which is available for sale after having taken into account the combination of losses due to condensation in the reservoir, the extraction of separator or condensate and plant liquids (tr. 1815).

[14] In Ex. X–2, Sh. 1, Col. m, ln. 16, it was estimated there was initial gas in place of 1,183,517,000 Mcf and, on ln. 17, terminal gas in place of 89,479,000 Mcf of which, the witness Olson, a vice president of DeGolyer and MacNaughton, testified 93 percent would be recovered from Rayne Field by Texas Eastern. (Tr. 2331)

[15] The revenue from the sale of this condensate and plant liquids goes first, to partially reimburse Continental for the management and operation of Rayne Field and, second, the remainder to Continental *et al.* as their interests may be, until the mortgage from buyer to sellers is paid in full. Thereafter any revenue from this source is to be retained by Texas Eastern.

the public interest requires the Rayne Field gas from Texas Eastern. This "in line" price will subsequently be developed.

Since this is a certificate hearing under Section 7 of the Act the immediate issue is to determine at what price—as CATCO says, under what conditions—may Texas Eastern dedicate the Rayne Field gas to interstate use, to state this issue in different words, with the same purport, at what price does the public convenience and necessity [16] require the Rayne Field gas from Texas Eastern? In considering these conditions—or the initial price—the Examiner will again refer to CATCO, *supra*, and use that decision as his guide, as did the Commission itself in its Opinion No. 351, issued January 22, 1962, in a matter very comparable to these proceedings, to determine an "in line" initial price. In CATCO the Supreme Court said the Act does not require a determination of just and reasonable rates in a certificate application, as is required in a rate case. The Court then went on to say a determination of a "just and reasonable" rate is not a prerequisite to the issuance of a certificate, however, the Commission is required to give most careful scrutiny to proposed initial prices. These must be shown to be required by the public convenience and necessity otherwise the Commission in the exercise of its discretion may attach such conditions to the certificate of public convenience and necessity as it believes necessary or the application must be denied. In its review of the Commission's Opinion No. 322 the Court of Appeals, D.C. Circuit, 287 F. 2d, 143, 145 in applying the CATCO rule said, "we read that decision as holding that where a natural gas company seeks an unconditional certificate to make new sales of natural gas at proposed prices which are 'out of line' with existing prices, or which will tend to have an inflationary impact on the natural gas market, it is under an obligation to demonstrate upon the record the reasons why such increased prices are justified by the 'public convenience and necessity.'" The Court then went on to say the "petitioner claims that the total cost to Texas Eastern for each Mcf of Rayne Field gas will be 22.89 cents, including Louisiana tax of 2.3 cents" and then they said ". . . we think it clear that the price is high enough to be in the disputed area to which the CATCO rule applies."

The record contains evidence of the cost of purchasing gas, at certificated prices, and transporting this gas to Opelousas, Lousiana—this being the point where the Rayne Field gas enters the Texas Eastern interstate system—to compare these F.O.B. Opelousas prices with the proposed Rayne Field prices.

Texas Eastern says it pays 14.4¢ per Mcf at 15.025 psia for Wilcox Trend gas and the estimated cost for transportation to Opelousas was 9.6¢ per Mcf for a total cost, at that point, of 24.0¢ per Mcf. Gas purchased in Texas Railroad Districts 2 and 4 at 15.6¢ per Mcf at 15.025 psia costs 9.1¢ per Mcf for transportation for an Opelousas cost of 24.7¢ per Mcf and that Pemex gas costing 15.6¢ per Mcf at 15.025 psia costs 9¢ per Mcf transportation for an Opelousas total cost of 24.6¢ per Mcf.

Also the record contains evidence of prices being paid, and related information on sales, in South Louisiana for natural gas under long term contracts dated between January 1, 1958 and June 30, 1959. As will be seen hereafter these prices are not applicable here.

Here, as the Commission said in its Opinion 351, the initial price should be determined as of the dates of the various contracts of acquisition which were initially executed on February 1, 1957 and the application dedicating the gas to an interstate market filed with the Commission on April 22, 1957. Therefore

---

[16] The basis for regulation under the Natural Gas Act is the "public interest." Section 1(a) of the Act, see also *F.P.C. v. Sierra Pacific Power Co.*, 350 U.S. 348, 355.

the "in line" price as of April 22, 1957 must be herein determined since that was the date on which the Rayne Field gas was dedicated to an interstate market by Texas Eastern. The area price levels as announced by the Commission in its Statement of General Policy No. 61–1 on September 28, 1960, 24 FPC 818, as amended,[17] were not then applicable and no area rate proceedings have yet been held by the Commission to determine area rate levels.

There is a further reason why the "in line" price must be determined as of April 22, 1957, if this was not so then Texas Eastern might be enriched by the procedural delays herein. The price at the time of the dedication of the gas to an interstate market must be "in line" with other prices in the area as of that period.

While the CATCO case did not define what was meant by a price being "in line" the Ninth Circuit said in the *United Gas Improvement Co.* v. *F.P.C.* 283 F. 2d 817, 823 the "line" to be referred to "may properly be referenced to relevant existing producer prices under which substantial amounts of natural gas move in interstate commerce" and that the prices must be comparable. See, *Public Service Commission of New York* v. *F.P.C.* 287 F. 2d 146, *cert.* denied 365 U.S. 880; *United Gas Improvement Co.* v. *F.P.C.* 287 F. 2d 159; *United Gas Improvement Co.* v. *F.P.C.* 290 F. 2d 133.

In its Opinion 351, the Commission had under consideration, on remand from the Supreme Court in CATCO, a sale of natural gas by the Continental Oil Company—the same Continental Oil Company that thereafter sold its interest in the Rayne Field leases to Texas Eastern—and others to the Tennessee Gas Transmission Company from leases located "below sea bed out in the Gulf of Mexico some 15 to 25 miles offshore from Cameron and Vermilion Parishes,[18] Louisiana," 360 U.S. 378, 382. The CATCO contracts with Tennessee provided for an initial base price of 21.4¢ per Mcf at 15.025 psia, plus 1¢ tax. This price was much higher than Tennessee was then paying for gas. The Commission, in Opinion 351, said at page 102, "a price . . . is not in line as of a given time if it is the highest price or in the highest group of prices theretofore paid" and held, as did the Supreme Court, that a 1956 contract for the sale of gas at that initial base price was clearly out of line. A certificate was issued conditioned at a price of 18.5¢ per Mcf at 15.025 psia as being the "in line" price even though that price was higher than the majority of prices in that area in 1956.

In summary, the various initial price computations are as follows, (1) the original gas purchase contracts provided for an initial price to Texas Eastern of 22.6¢ per Mcf plus 1.3¢ per Mcf for a total of 23.9¢ per Mcf, see 21 FPC 860, 861; then Texas Eastern acquired the leases and, by their Exhibit X–15 herein, show a total cost of service, including a 6 percent rate of return plus estimated Federal income taxes, of $138,950,200, an average cost of 18.79¢ per Mcf at 15.025 psia, exclusive of Louisiana tax; and in Exhibit X–16, by including the

[17] By its Fourth Amendment to its Statement of General Policy No. 61–1, issued October 31, 1961, 26 FPC 661, the Commission said "It is apparent that it would be contrary to the public interest for us to maintain a price level in Southern Louisiana" of 21.5¢ per Mcf at 15.025 psia, plus state taxes, as announced in its First Amendment on October 25, 1960, 24 FPC 902, "which the courts have ruled out of line." "We conclude that, effective this date" October 31, 1961, "the ceiling price level for initial sales in Southern Louisiana, inclusive of state taxes, shall be 21.25¢ per Mcf (at 15.025 psia)." Since the Louisiana state tax as of that date was 2.3¢ per Mcf then the base ceiling price, exclusive of state taxes, would be 18.95¢ per Mcf at 15.025 psia.

[18] Rayne Field is located in Acadia Parish, Louisiana, which is immediately north of and contiguous to Vermilion Parish, and Cameron Parish is immediately west of and contiguous to Vermilion Parish, all in the State of Louisiana.

2.3¢ per Mcf Louisiana tax, the average cost amounts to 21.09¢ per Mcf at 15.025 psia; further, in Exhibit X–17, when the royalty and other outside interest gas is included at 22.6¢ per Mcf, the average cost amounts to 21.37¢ per Mcf and finally, in Exhibit X–18 when all of its costs, and estimated costs, are computed, the average cost becomes 24.34¢ per Mcf at 15.025 psia. The intervenors and the Staff stress the 24.34¢ per Mcf cost as being "out of line."

Since the Commission lacked jurisdiction over the price which Texas Eastern paid for the Rayne Field leases and the natural gas reserves thereunder then it seems immaterial, at least in a certificate application under Section 7 of the Act, what price was paid. The question then is, at what price does the public interest require the issuance of a certificate of public convenience and necessity dedicating the Rayne Field gas to an interstate market, or should the application be denied. The Ninth Circuit appropriately answered this question in *United Gas Improvement Co.* v. *F.P.C.* 283 F. 2d 817, 822, when it said, "the public has an interest in both obtaining reasonable rates and the expeditious dedication of needed new gas reserves."

The Commission found in Opinion 351, page 101, "the average of the initial base prices for contracts dated during the respective quarters of 1956 weighted by 1958 volumes are as follows: 17.00 cents, 18.22 cents, 17.38 cents, 16.65 cents" and that "a price not in excess of 18.5 cents would be 'in line,' although higher than the majority of prices in 1956." This, then, was the Commission's "in line" base price, for a volume of natural gas approximately double the Rayne Field estimated reserves, for contracts executed in August of 1956. As hereinabove stated the "in line" base price here is to be determined as of April 1957, some eight months later. Also, the Commission, by its Fourth Amendment to its Statement of General Policy No. 61–1, on October 31, 1961, *more than four years afterwards*, found the ceiling price level for this area to be 18.95¢ per Mcf, which is but .45¢ per Mcf increase in the "in line" price during the four year period of time.

Predicated upon the record herein and the applicable Commission and court decisions it is herewith determined the "in line" base price, exclusive of taxes, at which the public interest requires the issuance of a certificate of public convenience and necessity to Texas Eastern is 18.5¢ per Mcf at 15.025 psia and a certificate of public convenience and necessity, as so conditioned, is herewith issued to Texas Eastern as hereinafter ordered.

It seems to be appropriate now to consider the effect of the Rayne Field gas costs in relation to any future rates of Texas Eastern. Since this is not a rate case under Sections 4 or 5 of the Act, the Rayne Field gas has already become, or will become upon Texas Eastern's acceptance of the conditioned certificate issued herein, part of the combined gas supply available to Texas Eastern's integrated pipeline system, the future rates of which may, as in the past, be predicated on a system-wide cost of service and a system-wide method of allocation. Combining the costs pertaining solely to the Rayne Field gas with the costs of the remainder of the gas supply available to Texas Eastern means "rolling in" gas costs which may be appreciably greater than the average cost of Texas Eastern's gas supply existing immediately prior to Texas Eastern's acquisition of the Rayne Field gas and leases.

Therefore, to make the information, in the manner herein directed, available in identifying costs in any future rate hearing, or other proceedings, a condition will be attached to the certificate of public convenience and necessity herein issued to Texas Eastern to maintain, as a part of its primary corporate books of account, separate accounts and records in a manner which at all times will show: (1) the acquisition costs together with the costs involved in producing the Rayne

Field gas which is attributable to the working interest in the leases acquired from Continental *et al.*, and (2) all remaining costs incurred by Texas Eastern to make such gas available to its interstate pipeline system, so that by combining the costs of these two categories, the total cost of the Rayne Field acquisition and gas to Texas Eastern as measured at the tailgate of the Rayne Field processing plant will be separately recorded.

Specifically, Texas Eastern is directed to maintain, during the period Rayne Field gas is available to it, in strict accordance with the Commission's Uniform System of Accounts, supplemental accounts which will at all times provide summary and detailed data respecting the cost of the Rayne Field gas to Texas Eastern, as follows:

(1) Respecting the costs of the acquisition of the gas leasehold interests, incurred or to be incurred, by Texas Eastern in its transactions with the producer companies, this accounting must at all times be clear, understandable and evidenced by appropriate and sufficient documents, such as copies of contracts, agreements, correspondence and all memoranda including that relating to Federal income taxes;

(2) The write-off of note payments;

(3) Concerning additional costs borne or to be borne by Texas Eastern in making the gas available to its interstate pipeline system; all gas plant, depreciation, depletion and amortization reserves, revenues, and revenue credits, operating expenses, depreciation provisions, taxes, etc. *i.e.*, all items which would be involved in a cost of service for the Rayne Field gas to Texas Eastern;

(4) All inter-company transactions shall be recorded;

(5) Appropriate records of the Mcf volumes of gas as related to Items (1) through (4) above.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this reopened proceeding, the evidence adduced and the briefs filed, the Presiding Examiner finds and concludes, in addition to the findings and conclusions hereinabove stated, that:

(1) The Texas Eastern Transmission Corporation (Texas Eastern) a Delaware corporation whose principal place of business is located at Shreveport, Louisiana, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sale of natural gas from the Rayne Field, Acadia Parish, Louisiana, by Texas Eastern, all as more fully described in its application for a certificate of public convenience and necessity and as fully considered hereinabove, is, or will be upon the acceptance of the conditioned certificate of public convenience and necessity issued herein, made in interstate commerce, subject to the jurisdiction of the Commission, and such sale by Texas Eastern, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Texas Eastern is capable of properly doing the acts and performing the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission issued thereunder.

(4) The sale of natural gas from the Rayne Field by Texas Eastern, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is required by the public convenience and necessity, and certificates therefor should be issued as hereinafter conditioned and ordered.

(5) It is necessary and appropriate in the administration of the Natural Gas Act that the initial price charged by Texas Eastern for the sale of natural gas from the Rayne Field in interstate commerce be conditioned at 18.5¢ per Mcf, exclusive of taxes, at 15.025 psia.

(6) It is further necessary and appropriate in the administration of the Natural Gas Act that Texas Eastern maintain at all times, during the period the Rayne Field gas is available to it, complete and separate records to accurately reflect the total cost of acquiring the Rayne Field leases and the later costs for producing the Rayne Field gas all as more fully detailed and directed hereinabove.

(7) The public interest requires the issuance of a new certificate of public convenience and necessity to Texas Eastern conditioned at an initial price of 18.5¢ per Mcf of natural gas at 15.025 psia and further conditioned upon the keeping of separate records by Texas Eastern for the Rayne Field natural gas as hereinabove specified in more detail.

(8) The conditions hereunto attached to the new certificate of public convenience and necessity herein issued to Texas Eastern are found to be necessary and required by the public convenience and necessity and in the public interest.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, as amended, that:

(A) A permanent certificate of public convenience and necessity is hereby issued to the Texas Eastern Transmission Corporation conditioned so that the base price, exclusive of Louisiana state taxes, for the Rayne Field natural gas, from the date of initial service, shall be, until lawfully changed in the manner provided by the Natural Gas Act, 18.5¢ per Mcf at 15.025 psia, the certificate hereby issued is further conditioned to require Texas Eastern Transmission Corporation to keep and maintain complete, accurate and separate records reflecting its costs of acquisition, maintenance, operation, production, revenue, etc., as more completely specified hereinabove.

(B) The conditioned permanent certificate of public convenience and necessity herein issued to the Texas Eastern Transmission Corporation is not transferable and shall be effective only so long as it continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission issued thereunder.

(C) The granting of the conditioned permanent certificate of public convenience and necessity to the Texas Eastern Transmission Corporation herein is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the Texas Eastern Transmission Corporation.

HARRY W. FRAZEE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. RP63-1

ORDER GRANTING APPEAL AND PRESCRIBING SCHEDULE OF BRIEFS

(Issued February 6, 1963)

On January 31, 1963, Staff counsel filed an appeal from the schedule for filing of briefs prescribed by the Presiding Examiner at the close of the hearing in this proceeding on January 28, 1963.

The Examiner has allowed a total period of 107 days for the preparation of such briefs and in addition to providing for seriatim main briefs and reply briefs, has also provided for cross briefs to be exchanged between the staff and interveners. Replies to staff's appeal have been filed by United Gas Pipe Line Company, Southern Natural Gas Company, Texas Gas Transmission Company and Mississippi River Fuel Corporation within the time prescribed by the Commission.[1] In addition, the record on this question has been certified for our consideration.

Based upon our review of all these documents, we believe that the staff's proposal for filing of briefs in this proceeding should be adopted. In the Order Prescribing Hearing Procedures issued in this proceeding on August 6, 1962, 28 FPC 295, the Commission made manifest its objective that final decision herein should be reached as expeditiously as possible.

Following intensive study and analysis of the data submitted by United with its proposed increase and with the cooperation of all the parties in the hearing phase of the proceeding, hearings were concluded shortly after the termination of the suspension period. However, in order that our objective can be fully implemented, it is necessary that all other phases of the proceedings, including briefs to the Examiner, initial decision and exceptions thereto, be similarly expedited. Accordingly, the briefs in this matter should be filed as hereinafter provided.

The Commission orders:

All parties to the proceeding desiring to do so, shall simultaneously file initial briefs on or before March 14, 1963 and reply briefs on or before April 3, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

AMERICAN GAS PIPELINE COMPANY, DOCKET NO. CP63–73; NORTHERN NATURAL GAS COMPANY, DOCKET NO. G–18606

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND TERMINATING CERTIFICATE

(Issued February 7, 1963)

On September 24, 1962, American Gas Pipeline Company (Applicant) filed in Docket No. CP63–73 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the acquisition by purchase from Northern Natural Gas Company (Northern) and operation of certain transmission facilities presently being used by Northern to transport natural gas for Metropolitan Utilities District of Omaha, Nebraska (District), and for American Gas Company (American Gas), all as more fully set forth in the application on file with the Commission.

Applicant proposes to acquire from Northern and operate approximately 1.1 miles of 6-inch pipeline extending from a point in Omaha, Nebraska, through the community of Carter Lake, Iowa, to a point in East Omaha, Nebraska, and to continue the transportation service presently being rendered by Northern

[1] Southern Union Gas Company by telegram also stated that it objected to staff counsel's appeal.

through such facilities. Northern presently transports gas for deliveries to Applicant's parent, American Gas, for distribution in Carter Lake and for deliveries to District for distribution in East Omaha. The said facilities were constructed and are presently owned and operated by Northern pursuant to certificate authorization issued by the Commission on October 20, 1959, in Docket No. G–18606, 22 FPC 729.

American Gas and District each purchase their respective requirements for Carter Lake and East Omaha directly from Northern. Northern delivers American Gas' volumes to District at District's Omaha city gate; District transports said gas from the city gate to the point of redelivery to Northern in Omaha where the 1.1 miles of pipeline to be acquired originates. Northern then transports the gas through said pipeline for both District and American Gas and delivers it to them for distribution in East Omaha and Carter Lake.

By agreement, dated March 27, 1959, Northern agreed to construct and operate the subject facilities and American Gas agreed to purchase same. By assignment of August 1, 1962, American Gas' rights and obligations were assigned to Applicant.

Applicant will pay Northern the original cost less accrued depreciation for the subject facilities. The proposed acquisition will be financed from funds obtained from American Gas, Applicant's parent, in exchange for common stock.

Applicant states that upon acquisition of the subject facilities Applicant will continue to operate the facilities and provide the transportation service presently being rendered by Northern, and that no abandonment of facilities or service will be involved.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 29, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, American Gas Pipeline Company, an Iowa corporation having its principal place of business in Council Bluffs, Iowa, upon the consummation of the acquisition of the facilities and the commencement of operation thereof for which authorization is requested herein, will be engaged in the transportation of natural gas in interstate commerce and will be, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The facilities proposed to be acquired and operated by Applicant, as hereinbefore described and as more fully described in the application in this proceeding, will be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The acquisition and operation of the facilities and the transportation and delivery of natural gas therefrom, as proposed by Applicant, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's

compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d) and (e) of Section 157.20 of such Regulations.

(6) Applicant should file, in conformity with the Commission's Regulations under the Natural Gas Act, an appropriate rate schedule for the transportation service hereinafter authorized.

(7) The certificate issued to Northern Natural Gas Company by the Commission's order, issued October 20, 1959, in Docket No. G–18606 [22 FPC 729] should be terminated, and Northern should file a notice of cancellation of its FPC Gas Rate Schedule T–1.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, American Gas Pipeline Company, to acquire and operate the facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (d) and (e) of Section 157.20 of such Regulations.

(C) The acquisition hereinabove authorized shall be consummated and operation begun by Applicant within three months of the date hereof.

(D) Applicant shall file, in conformity with the Commission's Regulations under the Natural Gas Act, an appropriate rate schedule for the transportation service authorized by paragraph (A) above.

(E) The certificate issued to Northern Natural Gas Company by the Commission's order, issued October 20, 1959, in Docket No. G–18606, shall be terminated upon the consummation of the acquisition authorized in paragraph (A) above; further, Northern shall file a notice of cancellation of its FPC Gas Rate Schedule T–1.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

ORDER DENYING REQUEST FOR THE PRODUCTION AND DISCLOSURE OF DOCUMENTS AND APPLICATION FOR SUBPOENA DUCES TECUM AND AD TESTIFICANDUM

(Issued February 7, 1963)*

On January 11, 1963, Texaco Inc. (Texaco) filed an extensive request for the production of all books, papers, press releases, correspondence, memoranda, reports, records, analyses, computations, charts, graphs, schedules, summaries, projections, and writings of any kind whatsoever utilized by the Commission in determining the initial service rate for Southern Louisiana as reflected in its *Statement of General Policy No. 61–1*, 24 FPC 818 (1960), the *First Amendment to the Statement of General Policy No. 61–1*, 24 FPC 902 (1960) and the *Fourth Amendment to the Statement of General Policy No. 61–1*, 26 FPC 661 (1961). In addition Texaco applied for the issuance of a subpoena directing the Secretary of the Commission to appear before the Hearing Examiner in the instant proceeding to testify and to bring with him and produce the aforementioned papers and documents. Similar requests were filed by Continental Oil Company on January 17, 1963, by Phillips Petroleum Company on January 25, 1963, by Pan American Petroleum Company on January 28, 1963 and by Hassie Hunt Trust, Hunt Oil Company and H. L. Hunt on January 28, 1963.[1]

Petitioners filed applications for certificates of public convenience and necessity in the above-listed dockets, pursuant to Section 7 of the Natural Gas Act (Act) requesting authorization to sell gas in interstate commerce. Petitioners have been granted the hearing required by Section 7 of the Act for the receipt of evidence leading to a determination as to whether the public convenience and necessity require the issuance of the requested certificates. (Order in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, issued December 31, 1962). Evidence upon which a determination of the issues in these cases, including the price issue, may be made, accordingly will be entered into the record.

Under the injunction of *CATCO* the Commission must give a most careful scrutiny and responsible reaction to the initial price proposals of producers under Section 7.[2] The Commission, of course, must weigh all factors bearing upon the public interest in determining whether a certificate should issue, and upon what terms. In each case the Commission must proceed upon the evidence before it to determine whether the applicant has supported his proposal by evidence showing the necessity thereof to the present or future public convenience and necessity before a permanent certificate may be issued.

The burden is upon the producer—applicant to prove that a certificate as requested is required by the public convenience and necessity. There is no burden upon the Commission, the Secretary of the Commission or the Commission Staff which must be borne to prove that fact. The effect of the instant request is to place upon the Commission the burden of justifying a policy which it has expressed in its Statement of General Policy No. 61–1, as amended. Neither the Natural Gas Act nor the Administrative Procedure Act casts any such burden upon the Commission. A general statement of policy is a statement issued by an agency to advise the public properly of the manner in which the agency proposes to exercise a discretionary power. See Attorney General's Manual on Administrative Procedure Act, footnote, 3, page 30.

---

*Rehearing and reconsideration denied by order issued April 2, 1963, 29 FPC 697.

[1] These parties together with Texaco will hereinafter be referred to as Petitioners.

[2] *Atlantic Refining Co. v. Public Service Commission of N.Y.*, 360 U.S. 378, 391.

While the Statement of General Policy No. 61–1, as amended, sets forth the guideline prices for all gas produced in specific areas for interstate consumption, there has been and can be no demonstration that failure of the Commission to specify and disclose the underlying information which led it to adopt specific "ceilings," or any staff memoranda upon which such determinations may have been based, has resulted or will result in Petitioners being aggrieved in these proceedings.

Our opinion in *Skelly* makes it clear that the Policy Statement sets forth only "guideline" prices at which the Commission indicated it would exercise its discretion in the absence of protest by intervening parties to certificate sales in a particular area.[3] It did not purport to fix the "in-line" price which *CATCO* and the *UGI* cases[4] which followed it make clear are, in the absence of a compelling showing to the contrary, to be the public convenience and necessity price fixed after the statutory Section 7 hearing.

The burden of justifying the price at this hearing rests with the producer-applicant, but to the extent that contract provisions allow, this price may be higher or lower than the guideline price as the evidence demonstrates.[5]

Petitioners have demonstrated no reason justifying the production of the documents and issuance of a subpoena as requested. Accordingly it is necessary that the requests be denied.

The Commission orders:

(A) The requests of Petitioners for the production and disclosure of documents and the applications for subpoena *duces tecum* and *ad testificandum* are hereby denied.

Commissioner Morgan *concurring* for the reasons set forth in his concurring statement issued January 30, 1963, in Amerada Petroleum Corporation, *et al.*, Docket No. CI12–1544, *et al.* 29 FPC 171.

Commissioner Ross *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63–77

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1963)

On September 27, 1962, El Paso Natural Gas Company filed in Docket No. CP63–77 an application pursuant to Section 7(e) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery

---

[3] See *Skelly Oil Company, et al.*, 28 FPC 401, Opinion 362, Docket No. G–18638, *et al.*, issued on August 30, 1962.

[4] *United Gas Improvement Co.* v. *FPC*, 283 F. 2d 817 (CA, 9) *certiorari* denied 365 US 881, *United Gas Improvement Co.* v. *FPC*, 290 F. 2d 133 (CA, 5) *certiorari* denied 368 US 823.

[5] Our reference in *Skelly* to the fact that the producers in those proceedings would be free to show whether the in-line price at the time of their contracts was the original ceiling price established on September 28, 1960, the lower price found to be the in-line price prior to that date or the 16-cent price established in the 5th Amendment to the Statement of General Policy does not mean that they are confined to any of these three separate prices if the relevant in-line price was in fact at some other level. By this language we meant only to convey the thought that at this hearing all parties would be free to show the proper in-line price, wherever it might happen to fall.

of natural gas to Cascade Natural Gas Corporation (Cascade) at the existing measuring and regulating station located at the terminus of Applicant's 6⅝-inch O.D. Bellingham sales lateral in Whatcom County, Washington, for resale and distribution in the community of Ferndale, Washington, and environs, all as more fully set forth in the application.

The subject sales and deliveries will be made through Applicant's existing facilities without modification or extension. To render the service proposed, Cascade will extend its facilities a distance of approximately 1.6 miles in order to connect its present Bellingham distribution facilities with those facilities necessary to provide service in the community of Ferndale.

The estimated natural gas requirements for Ferndale for the first three years of operation are as follows:

Mcf at 14.73 psia

	1st year	2d year	3d year
Peak day	166	244	266
Annual	29,324	37,158	39,705

The proposed sales and deliveries of natural gas to Cascade will be made on firm and interruptible bases in accordance with Applicant's FPC Gas Tariff, Original Volume No. 3. The gas will be used for residential, commercial, and industrial purposes.

No expenditures or financing will be required to make the subject sales and deliveries. The proposed service will not impair Applicant's ability to meet other firm obligations.

Cascade has received a certificate of public conveniences and necessity from the Washington Public Service Commission and a franchise from the City of Ferndale to sell and distribute natural gas in Ferndale.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 23, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The sale and delivery of natural gas by Applicant to Cascade Natural Gas Corporation for resale and distribution in Ferndale, Washington, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sale and delivery are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The sale and delivery of natural gas proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), and (e) of Section 157.20 of such Regulations.

(C) The sale and delivery of natural gas hereby authorized shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within nine months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MILLER GAS COMPANY v. CITY GAS COMPANY, FLORIDA GAS TRANSMISSION COMPANY (FORMERLY HOUSTON TEXAS GAS AND OIL CORPORATION), DOCKET NO. CP61-161

ORDER PERMITTING WITHDRAWAL OF COMPLAINT AND TERMINATING PROCEEDINGS

(Issued February 8, 1963)

On January 24, 1963, the Miller Gas Company filed a "Notice of Withdrawal of Complaint", pursuant to Section 1.11(d) of the Commission's Rules of Practice and Procedure, stating that incursions into its service territory by the City Gas Company have ceased. Under these circumstances Miller is of the belief that, "no further action is required in these proceedings." Good cause exists, therefore, for permitting the withdrawal and for terminating the proceedings in this docket.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act to permit the withdrawal of the above-entitled complaint and to terminate the proceedings in Docket No. CP61-161.

The Commission orders:

(A) The withdrawal of the complaint in Docket No. CP61-161 is hereby permitted.

(B) The proceeding in Docket No. CP61-161 is terminated.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA,[1] DOCKET NO. CP62-256

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1963)

On May 4, 1962, Natural Gas Storage Company of Illinois now Natural Gas Pipe Line Company of America (Applicant) filed in Docket No. CP62-256 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of pipeline and field storage facilities at the Herscher Storage Field in Kankakee County, Illinois, to provide for an increase in maximum daily storage withdrawal, all as more fully set forth in the application.

Applicant seeks authorization for the following facilities:

(1) Approximately 9.59 miles of 36-inch pipeline extending from a point of connection with Applicant's existing 36-inch pipeline at the Illinois River to the termini of the existing 30-inch and 36-inch pipelines near Joliet, Illinois;

(2) Three injection-withdrawal wells in the Galesville Reservoir;

(3) Five injector-withdrawal wells in the Mt. Simon Reservoir; and

(4) Additional cushion gas and miscellaneous facilities necessary or convenient to the operation of the above facilities.

The estimated cost of the proposed facilities is $3,264,700, to be financed from the sale of first mortgage bonds.

The subject facilities will be used to provide maximum peak hour withdrawal capacity of 43,750 Mcf and to increase the maximum daily withdrawal from storage by 75,000 Mcf to a total of 875,000 Mcf of natural gas by using all three reservoirs, namely, the Galesville and Mt. Simon at the Herscher Field and the Cooks Mills Field. Past experience has shown that Applicant's utility customers require peak hour deliveries equal to approximately 5% of peak day deliveries. Although the ratio has not changed over a number of years, its effect on volumes to be delivered becomes of more importance as the volume of total daily deliveries increases. The subject facilities have been designed to incorporate this peak hour concept, and accordingly the facilities will be capable of handling an hourly delivery of 43,750 Mcf which is 5% of the proposed peak day storage delivery of 875,000 Mcf.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 31, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois is a "natural-gas company" within the meaning of the Natural Gas Act heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

---

[1] The application was filed by Natural Gas Storage Company of Illinois. On October 1, 1962, the Commission authorized Natural Gas Pipeline Company of America to acquire and operate Natural Gas Storage Company of Illinois. The acquisition was completed on November 19, 1962.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within twelve months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP63-101

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1963)

The Ohio Fuel Gas Company (Applicant) filed on October 19, 1962, an application pursuant to Section 7 of the Natural Gas Act, as amended, for a certificate of public convenience and necessity authorizing it to construct and operate certain natural gas transmission facilities necessary to extend gas service to the Ava Brick Corporation in Noble County, Ohio, as hereinafter described, all as more fully represented in the application.

737-369—64——21

Applicant proposes to construct and operate the following facilities:

Approximately 1.0 mile of 3½" O.D. lateral pipe line and industrial sale metering and regulating equipment for service to Ava Brick Corporation in Noble County, Ohio.

Together with valves, fitting and incidental facilities necessary for practical operation.

The estimated peak day and annual requirements of the prospective customer are as follows:

	Mcf
Peak day	300
Annual	86,000

Peak day deliveries are subject to curtailment in order to maintain service to domestic customers.

Service to this prospective customer will not impair Applicant's ability to serve its existing customers.

The proposed construction including metering facilities on the customer's premises is estimated to cost $18,827. Applicant will finance this amount from cash on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 30, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 21, 1945, in Docket No. G–371 (4 FPC 1033).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale and delivery of natural gas, as hereinbefore described, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations, and that the construction of the facilities authorized by this order should be com-

pleted and said facilities placed in actual operation within six months from the date on which this order issues.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing The Ohio Fuel Gas Company to construct and operate the facilities hereinbefore described, and to deliver natural gas in accordance with the terms of the contract between Applicant and the Ava Brick Corporation which is a part of the application herein.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(C) The construction of the facilities authorized by this order shall be completed and said facilities shall be placed in actual operation within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP61-119

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1963)

On October 17, 1960, as supplemented on October 19, 1962, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP61-119 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a measuring and regulating station in Saginaw County, Michigan, to be used for the sale and delivery of natural gas to Michigan Gas Storage Company (Storage Company), an existing customer, for resale to Consumers Power Company (Consumers) for resale and distribution, all as more fully set forth in the application as supplemented.

Consumers proposes to provide retail gas service in the communities of St. Charles, Chesaning and Shields, Michigan, and to make industrial sales to Dow Chemical Corporation.

Storage Company has received a certificate of public convenience and necessity for its facilities in Docket No. CP61-98.

The estimated cost of the subject facilities is $20,000.

On February 9, 1961, the Commission issued temporary authorization for the construction and operation of the subject facilities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 29, 1963, concerning the matters involved in and the issues presented by the application, as supplemented, herein. No protest to the granting of the application or notice of intervention has been received. A petition to intervene was filed on November 23, 1960, by Michigan Consolidated Gas Company requesting a limitation on certain facilities which Applicant proposed to construct and operate. By its supplement to the application Applicant withdrew its request for authorization for the facilities to which the Petitioner objected, and the petition was thereby rendered moot. No other petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c) (1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable

Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NOS. CP60–122, CP61–203; ALGONQUIN GAS TRANSMISSION COMPANY, DOCKET NOS. CP60–124, CP61–220; UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP61–151; SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP61–206; TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP61–247; ARKANSAS-MISSOURI POWER COMPANY, DOCKET NO. CP62–20

ORDER MODIFYING OPINION NO. 372 AND ORDER ISSUED DECEMBER 17, 1962

(Issued February 8, 1963)

On January 16, 1963, Counties Gas Company (Counties) filed an application for rehearing and reconsideration requesting the following changes in the Commission's Opinion No. 372, 28 FPC 1035, and order issued in this case on December 17, 1962:

(1) Substitution of Belleville Gas Company (Belleville) and Valley Gas Company (Valley) as parties to this proceeding in lieu of Counties with respect to the allocations of gas requested for the Belleville and Martinsburg-Roaring Springs areas, respectively.

(2) Authorization of a sale of 674 Mcf per day at 15.025 psia by Texas Eastern Transmission Corporation to Belleville.

The requested substitution for Belleville and Valley arises from the denial of Counties' omnibus application for a plurality of service area authorization by the Pennsylvania Public Utilities Commission (Pennsylvania PUC). This denial necessitated the refiling of separate applications for specified services areas. To conform to prevailing Pennsylvania PUC policy, separate subsidiaries of Penn Fuel Gas, Inc. were constituted as applicants in the refiled proceedings.

Our earlier denial of the requested allocation of gas to the Belleville area was premised solely upon legal inability of Counties to perform. This defect, however, has been corrected by the certification of Belleville by the Pennsylvania PUC. The record indicates that the proposed service to the Belleville area is economically feasible and our order issued December 17, 1962 should be modified to direct Texas Eastern to sell a maximum of 674 Mcf of gas per day at 15.025 psia to Belleville.

The Commission orders:

Opinion No. 372 and order issued December 17, 1962 is hereby modified in the following respects:

(A) Belleville Gas Company and Valley Gas Company are made parties to this proceeding as successors to Counties Gas Company with respect to the allocations of gas requested for the Belleville and Martinsburg-Roaring Springs areas, respectively.

(B) Texas Eastern Transmission Corporation is directed to sell to Belleville Gas Company a maximum of 674 Mcf of gas per day at 15.025 psia.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TEXAS EASTERN TRANSMISSION CORPORATION AND UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-135

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1963)

On November 19, 1962, Texas Eastern Transmission Corporation (Texas Eastern) and United Gas Pipe Line Company (United) filed in Docket No. CP63-135 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the operation by United of an existing 8-inch tube orifice station located near the City of Tyler in Smith County, Texas, as an additional point of delivery of exchange gas by United to Texas Eastern under existing exchange agreements, and authorizing the exchange of natural gas by Applicants at this point, all as more fully set forth in the application.

The exchange agreements, on file as United's Rate Schedules X-1, X-2, and X-3 and Texas Eastern's Rate Schedule X-6, provide for the exchange of natural gas on a gas-for-gas basis without the payment of charges by either party. It is contemplated that approximately 3000 Mcf of exchange gas per day will be returned at the new exchange point.

No financing or expenditures are necessary to effect the subject proposal.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 31, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued October 11, 1947, in Docket No. G-880 (6 FPC 171).

(3) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the operation thereof by United and the exchange of natural gas between United and Texas Eastern through said facilities are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The operation of the subject facilities by United and the exchange of natural gas through said facilities between United and Texas Eastern are

required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing United Gas Pipe Line Company to operate the subject facilities to deliver natural gas to Texas Eastern Transmission Corporation and authorizing United and Texas Eastern to exchange natural gas through said facilities, all as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63-82

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1963)

On October 3, 1962, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP63-82 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities for the purpose of transporting and supplying to Lynchburg Gas Company additional volumes of natural gas to enable it to serve the town of Scottsville, Virginia and the nearby industrial plant of the United States Rubber Company for fabric drying purposes. The proposed facilities are to consist of a sales meter station and appurtenant equipment to be located in Fluvanna County, Virginia at mile post 1495.93 and to include a tap on Applicant's 30-inch main transmission line.

The estimated capital cost of the facilities is $11,600 which is to come from funds on hand and for which Applicant will be reimbursed in full by Lynchburg Gas Company. The volumes of gas to be sold and delivered through the proposed facilities are estimated at a maximum of 350 Mcf per day, of which 100 Mcf will be on a firm basis.

Pursuant to due notice, a public hearing was held in Washington, D.C. on January 29, 1963, respecting the matters involved in and the issues presented by the application. No petition to intervene or protest to the granting of the application has been received. Staff Counsel moved orally at the hearing that

the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company as alleged in its application.

(2) The facilities above described, as more fully described in the application, are subject to the jurisdiction of the Commission and the sale and delivery of natural gas to Lynchburg Gas Company for ultimate distribution to the people in the town of Scottsville, Virginia are required by the public convenience and necessity.

(3) Applicant is willing and able to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities for the purposes above stated are required by the public convenience and necessity and a certificate therefore should be issued as hereinafter ordered and conditioned.

(5) Until otherwise ordered by the Commission the volume of gas to be delivered by Applicant to Lynchburg Gas Company shall be limited to 100 Mcf of firm gas per day and 250 Mcf of interruptible gas per day.

(6) A request during the public hearing by Staff Counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and is hereby issued authorizing Applicant to construct and operate the facilities proposed and to sell and deliver natural gas in the amounts and for the purposes as hereinbefore stated, all as more fully described in the application.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Rules and Regulations of the Commission under the Natural Gas Act and particularly the terms and conditions of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-52

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1963)

On August 31, 1962, as supplemented on September 17, 1962, United Gas Pipe Line Company (Applicant) filed in Docket No. CP63-52 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities for the delivery of additional supplies of natural gas to existing customers, the City of Picayune, Mississippi, and United Gas Corporation, for resale and distribution in Picayune and Nicholson, Mississippi, respectively, all as more fully set forth in the application as supplemented.

Applicant seeks authorization to construct and operate approximately 0.04 mile of 4-inch tie-over pipeline beginning at a point on Applicant's 30-inch South

Louisiana-to-Mobile Junction main line and extending to the existing 4-inch Picayune lateral presently connected to Applicant's 16-inch Lirette-to-Mobile Junction main line, all in Hancock County, Mississippi.

The subject facilities are estimated to cost $15,090, to be financed from current working funds.

The additional volumes of gas are necessary due to the anticipated increase in population as a result of the proposed National Aeronautics and Space Administration test facilities whose location in the area has been announced. Any additional gas delivered through the subject facilities will be sold in accordance with Applicant's filed FPC Gas Tariff.

No question of gas supply is involved herein.

On October 12, 1962, the Commission issued a temporary certificate for the construction and operation of the subject facilities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 29, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G-216 (3 FPC 3).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NOS. CP63-124 AND CP63-125

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 8, 1963)

On November 6, 1962, United Gas Pipe Line Company (Applicant) filed in Docket No. CP63-125 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval of the Commission to abandon two 300 hp compressor units at the Dallas Junction Compressor Station in Dallas County, Texas, all as more fully set forth in the application which is on file with the Commission.

On November 6, 1962, Applicant filed in Docket No. CP63-124 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a compressor station using the facilities proposed to be abandoned in Docket No. CP63-125, and facilities for the enlargement of a meter station in Baldwin and Escambia Counties, Alabama, respectively, all as more fully set forth in the application in Docket No. CP63-124 which is on file with the Commission.

The application in Docket No. CP63-125 states that the Dallas Junction Compressor Station has been affected by the decline in deliveries to the Dallas-Fort Worth area to the extent that it does not appear likely that the compressor units will be needed in their present location in the foreseeable future.

The original cost of the facilities proposed to be removed was $69,438.96; the depreciated cost of the facilities at the time of filing the abandonment application was $40,533.74; and Applicant estimates the salvage value to be $57,086, less the cost of removal, $8,230. The cost of establishment of the new compressor station is estimated at $309,966, and the cost of enlargement of the metering facilities is estimated at $16,167, all to be financed from current working funds.

Applicant proposes to construct and operate a compressor station near Milepost 0.0 on Applicant's existing 8-inch Container Corporation of America lateral line in Baldwin County, Alabama, consisting of two 330 hp natural gas engine driven reciprocating compressors. Applicant also proposes to install high compression heads on the units removed from the Dallas Junction Compressor Station in order to up-rate each unit from 300 hp to 330 hp.

In addition to the construction and operation of the compressor station, Applicant also proposes to enlarge the existing Container Corporation of America meter station in Escambia County, Alabama. Applicant has entered into an agreement with Container Corporation of America dated July 2, 1962, under which the maximum daily delivery obligation is increased to 7,500 Mcf of gas until July 1, 1963, and then to 16,000 Mcf of gas. The increased deliv-

eries should have no substantial effect on Applicant's ability to meet its other existing obligations.

Pursuant to due notice, a public hearing was held in Washington, D.C., on January 30, 1963, respecting the matters involved in and the issues presented by the applications herein. No petitions to intervene or protests to the granting of the applications have been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application in Docket No. CP63-125, are subject to the jurisdiction of the Commission, and the abandonment of said facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonment by Applicant as hereinbefore described is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(4) The facilities proposed to be constructed and operated by Applicant as hereinbefore described, all as more fully described in the application in Docket No. CP63-124, are to be used in the transportation and delivery of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Applicant is able and willing properly to do the acts and to perform the service proposed in Docket No. CP63-124 and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(6) The construction and operation of the facilities proposed in Docket No. CP63-124 by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, United Gas Pipe Line Company, of the facilities hereinbefore described, all as more fully described in the application in Docket No. CP63-125, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of the subject abandonment within 10 days of the date thereof.

(C) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in Docket No. CP63–124, upon the terms and conditions of this order.

(D) The certificate issued by paragraph (C) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(E) The facilities hereby authorized in paragraph (C) above shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within four months from the date on which this order issues.

(F) The accounting for this transfer shall be in accordance with the Commission's Uniform System of Accounts prescribed for Natural Gas Companies.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

HUNT OIL COMPANY, DOCKET NO. RI63–128; SUN OIL COMPANY, DOCKET NO. RI63–129

ORDER SEVERING PROCEEDING, WAIVING AND OMITTING THE INTERMEDIATE DECISION IN ONE PROCEEDING, CONFIRMING DATES FOR THE FILING OF BRIEFS AND GRANTING CONTINUANCE

(Issued February 11, 1963)

On January 24, 1963, the presiding examiner in the above-entitled proceedings certified to the Commission two motions relating to the procedural aspects of these consolidated proceedings.

The first motion involves the *Hunt Oil Company* case, Docket No. RI63–128, wherein the staff requested that a continuance until March 18, 1963 be granted for the preparation and service of the direct presentations of the staff and interveners, and that the hearing in the *Hunt* case be reconvened on April 1, 1963 for cross-examination of the presentations.

Counsel for Hunt Oil Company (Hunt) objected to a continuance in excess of thirty days for the preparation of direct cases stating that Hunt waived its statutory right to put the increased rate in effect for a period of two months in order to obtain an extension of three weeks to file its direct case, and asked to have its waiver set aside if staff received such continuance. The extension of time proposed by Hunt for putting the increased rate in effect when it requested an extension of time for presenting its direct case is not relevant to the instant request made by staff, and the time granted staff and interveners does not affect the time at which Hunt may place its increased rate in effect. Staff's request and the reasons advanced therefor were considered sufficient by the presiding examiner and are considered sufficient by us.

The second motion relates to the procedural aspects of the *Sun Oil Company* case, Docket No. RI63–129. At the conclusion of cross-examination of Sun's direct presentatiion, staff and the participating interveners rested. Thereupon, staff moved with the agreement of all counsel that the *Sun* proceeding be severed from the *Hunt Oil Company* proceeding, Docket No. RI63–128; that the intermedi-

ate decision procedure be waived and omitted with respect to the *Sun* proceeding; and that dates for the filing of briefs in the *Sun* case be set as follows: the initial brief of Sun Oil Company be filed on February 25, 1963, the staff's and intervener's briefs be filed on March 18, 1963, and Sun's reply brief be filed on March 28, 1963. Inasmuch as the *Hunt* and *Sun* proceedings were originally consolidated to expedite the hearing process, consonant action warrants granting this motion.

The Commission orders:

(A) Staff, and the interveners if they so desire, shall file with the Commission and serve on the parties and the staff, as applicable, their cases-in-chief in the *Hunt Oil Company* proceeding, Docket No. RI63–128, on or before March 18, 1963, and the hearing in such proceeding shall reconvene at 10:00 a.m., April 1, 1963, in a hearing room of the Commission at 441 G. St., N.W., Washington, D.C.

(B) The *Sun Oil Company* proceeding in Docket No. RI63–129 is hereby severed from the *Hunt Oil Company* proceeding in Docket No. RI63–128, intermediate decision is waived and shall be omitted in the said *Sun* proceeding, and the dates established for the filing of briefs in the *Sun* proceeding are confirmed. Commissioners Morgan and Ross *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

CITY OF TEMPLE, GEORGIA, DOCKET NO. CP63–122

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued February 11, 1963)

On November 5, 1962, as supplemented on November 26, 1962, the City of Temple, Georgia (Applicant), filed in Docket No. CP63–122 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Southern Natural Gas Company (Respondent) to establish physical connection of its facilities with the facilities which Applicant proposes to construct and operate and to sell and deliver natural gas to Applicant for resale and distribution in said City and environs, all as more fully set forth in the application.

Respondent's pipeline passes within 6.7 miles of the City of Temple, and Applicant proposes to construct the necessary connecting line to receive gas from Respondent's facilities. Applicant also proposes to construct and operate a gas distribution system in the City of Temple. The facilities which Applicant proposes to construct are estimated to cost $231,000, which Applicant proposes to finance from a revenue bond issue of $128,000, and a grant of $103,000 from the Housing and Home Finance Agency under the Accelerated Public Works Program.

The estimated natural gas requirements in Mcf for the City of Temple are as follows:

	1st year	2d year	3d year
Annual	16,598	21,289	26,330
Peak day	188	233	280

On December 5, 1962, Respondent filed its answer to the subject application and stated that it consents to the granting of the application provided that the Commission determines that Applicant's proposed project is feasible.

Notice of the filing of the application was issued on January 7, 1963, and published in the Federal Register on January 11, 1963 (28 F.R. 336). No protest, request for hearing, or petition to intervene has been received.

The Commission finds:

(1) Applicant, the City of Temple, Georgia, is a municipal corporation organized and existing under the laws of the State of Georgia, and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in Temple and environs.

(2) Respondent, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(3) It is necessary and desirable in the public interest to direct Southern Natural Gas Company to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant as hereinbefore described, all as more fully described in the application in this proceeding, and to sell and deliver to Applicant up to 280 Mcf of natural gas per day for resale in the City of Temple, Georgia, and environs, as hereinafter ordered.

(4) Applicant should commence taking natural gas from Respondent within one year from the date of issuance of this order.

The Commission orders:

(A) Southern Natural Gas Company be and it is hereby directed to establish physical connection of its transmission facilities with the facilities proposed to be constructed by Applicant as hereinbefore described, together with such metering, regulating, and appurtenant facilities as may be required therefor, and to deliver and sell up to 280 Mcf of natural gas per day to Applicant pursuant to Respondent's appropriate rate schedules on file with the Commission, provided that Applicant shall commence the purchase of gas as proposed herein within one year from the date on which this order issues.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

TRUNKLINE GAS COMPANY, DOCKET NO. G–20108

FINDINGS AND ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 11, 1963)

On December 17, 1962, Trunkline Gas Company (Trunkline) filed a motion for an extension of time within which to complete certain of the experimental operations authorized in Docket No. G–20108. By Commission order, issued February 23, 1960, 23 FPC 435, in this proceeding, Trunkline was authorized, among other things, to install and operate, on an experimental basis, two gas turbine-driven compressor units at its compressor Station No. 31. Such authorization to operate the test units was for a period of one year from the date of completion of construction. Construction was completed on February 28,

1961. On February 6, 1962, the Commission extended the authorization to August 15, 1962, and on August 15, 1962, the authorization was further extended to December 13, 1962.

In the subject motion Trunkline states that testing on the larger of the two compressor units was successfully completed, but that further testing of the smaller 850 horsepower compressor is desirable. Therefore, Trunkline requests a further extension of time to and including July 1, 1963, for the testing of the 850 horsepower unit.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued February 23, 1960, in Docket No. G–20108 be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued February 23, 1960, in Docket No. G–20108 be and the same is hereby further amended to authorize the operation by Trunkline Gas Company of the 850 horsepower compressor unit for the purpose of testing to and including July 1, 1963, all is hereinbefore described and as set forth in the subject motion.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP60–36; GULF OIL CORPORATION, DOCKET NO. CI60–43; TIDEWATER OIL COMPANY, DOCKET NO. CI60–142

ORDER DENYING PETITIONS FOR ISSUANCE OF ORDERS GRANTING CERTIFICATES IN ACCORDANCE WITH APPLICATIONS AS MODIFIED BY OFFERS OF SETTLEMENT, AND GRANTING A FURTHER EXTENSION OF TIME

(Issued February 11, 1963)

These consolidated proceedings concern applications for certificates of public convenience and necessity filed by Gulf Oil Corporation (Gulf) and by Tidewater Oil Company (Tidewater) to sell and deliver natural gas to United Gas Pipe Line Company (United) and by United to purchase such gas, and to construct and operate such facilities to enable it so to do. Hearings on such applications began on January 4, 1961, and were concluded on October 19, 1961. Thereafter, on October 18, 1962, the presiding examiner issued an initial decision.

Following the conclusion of the hearings, the parties to these proceedings entered into a series of conferences for the purpose of attempting to settle the matters and issues concerned. As a result of such conferences, Gulf, on January 3, 1963, filed its petition for issuance of an order granting it a permanent certificate of public convenience and necessity in accordance with its application as modified by an attached offer of settlement. On January 4, 1963, Tidewater filed its petition and offer of settlement identical in form and substance with Gulf's. Additionally, Tidewater requested a further extension of time within which to file exceptions to the examiner's decision.[1]

---

[1] On January 3, 1963, a notice of further extension of time was issued granting all parties to and including February 15, 1963, within which to file exceptions to the initial decision herein.

In summary the offers of settlement provide:

(1) The rate to be paid by United for gas received by it from the date of initial delivery (June 22, 1962) to June 30, 1967, would be 20.625¢ per Mcf, inclusive of tax reimbursement;

(2) Extension of the make-up period for gas not taken in accordance with the contract in any calendar year, from one to four years;

(3) Refunds to United of two-thirds of the difference between the amount per Mcf actually collected for gas delivered and the settlement rate, with interest at seven per cent.

On January 28, 1963, Memphis Light, Gas and Water Division of the City of Memphis, Tennessee, and Mississippi Valley Gas Company (hereafter jointly styled "Memphis") intervenors in these proceedings, filed a joint opposition to the petitions and offers filed by Gulf and Tidewater, and to Tidewater's request for a further extension of time.

On February 4, 1963, Philadelphia Electric Company (Philadelphia) filed its response to said petitions and offers. Philadelphia states that the proposed settlement price is not required by the public convenience and necessity.

In view of the joint opposition filed by Memphis we find that we cannot accept the offers filed by Gulf and Tidewater, nor grant the petitions for issuance of permanent certificates as modified by said offers. We shall, however, grant Tidewater's request for a further extension of time within which to file exceptions to the examiner's initial decision.

The Commission finds:

(1) The petitions filed by Gulf on January 3, 1963 and by Tidewater on January 4, 1963, for issuance of an order in these consolidated proceedings granting each a permanent certificate of public convenience and necessity in accordance with their respective applications as modified by their offers of settlement must be denied, and said offers cannot be accepted.

(2) Good cause exists for granting all parties to these proceedings a further extension of time to file exceptions to the initial decision issued herein on October 18, 1962.

The Commission orders:

(A) The petition filed herein by Gulf on January 3, 1963, and by Tidewater on January 4, 1963, hereinabove described are denied.

(B) A further extension of time is hereby granted to and including March 4, 1963, within which all parties may file exceptions to the initial decision issued in these proceedings on October 18, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

BLACK HILLS POWER & LIGHT COMPANY, DOCKET NO. E-7077

ORDER AUTHORIZING ISSUANCE OF COMMON STOCK

(Issued February 13, 1963)

Black Hills Power & Light Company (Applicant), incorporated under the laws of the State of South Dakota and qualified to do business as a foreign corporation in the State of Wyoming, with its principal place of business at Rapid City, South Dakota, filed an application on January 11, 1963 as amended on January 31 and February 13, 1963, for an order, pursuant to Section 204 of the

Federal Power Act, authorizing it to issue and sell 21,391 shares of Common Stock, par value $1.00 per share.

The proposed shares of Common Stock will be offered to the holders of Applicant's presently outstanding Common Stock pursuant to preemptive rights. The stockholders of Applicant entitled to subscribe to the proposed issuance will be those of record at the close of business on February 13, 1963, or on such later date as shall be the business day immediately preceding the day on which the Registration Statement relative to the proposed issuance will become effective under the Securities Act of 1933. The shares will be offered to the stockholders of Applicant at a price of $45.50 per share and at the rate of one share for each 20 shares held of record. Rights to subscribe will be evidenced by transferable subscription warrants carrying an oversubscription privilege.

The application indicates that the offering will not be underwritten, however, Applicant proposes to enter into an agreement with Eastman Dillon, Union Securities & Co. (Dealer-Manager) to perform certain services in connection with the proposed issuance including the solicitation of subscriptions and the formation of a group of approved dealers to assist in such solicitation. For its services, Applicant proposes to pay the Dealer-Manager $1,500.00, plus an amount equal to 40 cents per share for each share of the stock offering issued through the efforts of such dealers including the Dealer-Manager. The proposed agreement with the Dealer-Manager also contemplates purchases of the Applicant's common stock and warrants during the subscription period and the exercise of such warrants to stablize the price of such securities during said period. For this service, Applicant proposes to pay an amount equal to 80 cents per share for each share (not to exceed 3,000 shares) acquired by the Dealer-Manager upon exercise of such rights. Applicant also proposes to pay Dealer-Manager its out-of-pocket expenses in connection with services reflected above not to exceed $6,000.00.

Gross proceeds from the stock issuance is estimated at $973,290. Applicant proposes to utilize the proceeds from the issuance and sale of the Common Stock for additions and improvements to its properties and reduction of bank loans heretofore obtained for such purpose. Expenditures for such additions and improvements during the fiscal year ending October 31, 1963, are presently estimated at approximately $3,398,100, including $1,594,000 for a portion of the cost of a 161 kv transmission line and appurtenant terminal facilities (total cost $2,294,000) from Rapid City, South Dakota through Hot Springs to the Nebraska boundary to interconnect with a similar line to be constructed by Consumers Public Power District of Nebraska-Western Division. The construction program also includes a proposed expenditure of $215,000 for a 69 kv transmission line between Osage and Newcastle, Wyoming and $1,375,600 for additional distribution plant. The Commission, on November 15, 1962, authorized the issuance of $995,000 principal amount of First Mortgage Bonds, Series M, 4¾%, due 1992, by Applicant, as a part of financing this construction program (Docket No. E-7066). Applicant estimates that in addition to the proceeds from the sale of Common Stock, plus the proceeds from the sale of the Series M First Mortgage Bonds and available funds on hand together with cash which will become available from operations, approximately $800,000 of additional funds will be needed to cover the remaining cost of its fiscal year 1963 construction program and to repay interim bank loans obtained in connection with such program. Applicant expects to sell additional securities as needed and as market conditions warrant to finance its construction program, however, Applicant has an established line of credit sufficient to permit it to complete its 1963 construction program if necessary.

Written notice of the application has been given to the Wyoming Public Service Commission and the South Dakota Public Utilities Commission, and to the Governor of each of those States. Notice of the application also was published in the Federal Register on January 30, 1963 (28 F.R. 878), stating that any person desiring to be heard or to make any protest with reference to the application shall file a petition or protest on or before February 8, 1963, with the Federal Power Commission, Washington 25, D.C. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued January 21, 1959. [*In the Matter of Black Hills Power & Light Company*, Docket No. E-6857, 21 FPC 43.]

(2) The proposed issuance and sale of Common Stock, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of Common Stock is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Common Stock is exempted by the provisions of Section 24.1a(a) (1) and (3) of the Commission's Regulations under the Federal Power Act from the requirements of competitive bidding.

(5) There is no affiliation, direct or indirect, through directors, officers, or stockholders, or the ownership of securities, or otherwise, between Applicant and the Dealer-Manager.

(6) The fees proposed to be paid to the Dealer-Manager in connection with the proposed issuance of Common Stock by Applicant do not appear to be unreasonable.

(7) The proposed issuance and sale of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of Common Stock, as described above, upon the terms and conditions, and for the purposes specified in the application, as amended, are hereby authorized, subject to the provisions of this order.

(B) This authorization shall expire unless the transactions hereby authorized are consummated within 90 days from the date of issuance of this order.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP61-199

ORDER ADOPTING INITIAL DECISION OF PRESIDING EXAMINER

(Issued February 14, 1963)*

Syllabus

1. Commission *issues* certificate of public convenience and necessity, under Section 7, of the Natural Gas Act, authorizing increased sales of gas to existing customer and initial sale to new market in Tennessee. PP. 297; 307.

A. J. Beckstrand, Thomas B. Taylor, Jr., Lambert McAllister and *Francis J. Walsh* for East Tennessee Natural Gas Company.

H. D. Erwin for Unicoi County Utility District and Volunteer Natural Gas Company.

James A. Gammon for Fuels Research Council, Inc., National Coal Association, and United Mine Workers of America.

David B. Ward for Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

By initial decision issued January 18, 1963, the presiding examiner in the above-entitled proceeding issued a certificate of public convenience and necessity to East Tennessee Natural Gas Company.

The time for filing exceptions to said decision has passed and no exceptions having been filed, the matter is now properly before us.

The Commission orders:

The initial decision of the presiding examiner issued on January 18, 1963, is adopted as the decision of the Commission in this proceeding effective as of the date of issuance of this order.

INITIAL DECISION

UPON APPLICATION TO CERTIFICATE NATURAL GAS FOR VOLUNTEER AND UNICOI, TENNESSEE

(Issued July 30, 1962)

LANDE, *Presiding Examiner:* This is a certificate proceeding under Section 7(c) of the Natural Gas Act in which East Tennessee Natural Gas Company (or applicant) requests authority to construct and operate approximately 14.5 miles of 6-inch lateral pipeline and appurtenant facilities for the purpose of selling and delivering additional natural gas to an existing customer, Volunteer Natural Gas Company (Volunteer) for resale in Johnson City, Tennessee, and the initial gas requirements of Unicoi County Utility District (District or Unicoi) for resale in and near the towns of Unicoi and Erwin, Unicoi County, Tennessee. East Tennessee's original application which was filed with the Commission on January 24, 1961, was supplemented on July 7 and August 18, 1961.

By order issued April 30, 1962, the Commission permitted Fuels Research Council, Inc., National Coal Association, and United Mine Workers of America (or Interveners), to intervene in this proceeding.

---

*Supplemental decision appears on p. 303.

A hearing on the application commenced as scheduled on May 23, 1962, and lasted three days. East Tennessee presented seven witnesses in support of its application.

Neither Staff nor the Interveners presented any evidence, but both conducted extensive cross-examination of the witnesses presented by East Tennessee, and they also filed briefs. Applicant filed an initial brief and a reply brief.

Position of Staff Counsel

East Tennessee's application covers additional service to Volunteer and new service to the Unicoi District project. Since applicant does not consider the possibility of serving the Volunteer project or the Unicoi District project alone it is imperative that the evidence support the application for both projects. Granted that applicant justified the proposed service to the Volunteer project and that East Tennessee is able and willing to finance such expansion, applicant's application for a certificate under Section 7(c) of the Act cannot be approved at this time because of failure to properly demonstrate economic justification. It is Staff counsel's position that the application should be denied at this time but that East Tennessee be allowed to present at some subsequent date proper showing of economic feasibility of the proposed Unicoi project.

Position of Interveners

Fuels Research Council, Inc., National Coal Association, and United Mine Workers of America have filed a joint petition alleging that the proposed sale and delivery of natural gas could cause the replacement of coal produced and transported by members of their organizations thereby depriving them of revenue and wages. The Interveners further alleged that the projects contemplated by the application may be economically and financially infeasible, unsupported by an adequate gas supply and otherwise inimical to the public convenience and necessity. Interveners contend that applicant's engineering report underlying the District's natural gas project is "inconsistent, unreasonable, unsound and thoroughly unreliable." Interveners insist that the record lacks concrete showing that the estimated large numbers of residential customers will attach to the District's gas system. The Interveners allege improbabilities and inconsistencies relating to estimated commercial attachments. Interveners further contend that the record will not support a finding of at least 1.5 times coverage on the District's proposed revenue bonds. Interveners claim that East Tennessee has failed to prove the requisite feasibility of initial natural gas service in the Unicoi County Utility District in Tennessee.

Position of Applicant

On July 13, 1962, East Tennessee replied to the briefs and statements of position of the Interveners and Staff counsel. Applicant summarized its position as follows:

The balancing and strengthening of Volunteer's Johnson City distribution system would reduce the per unit costs of distribution and increase its earning power. This, in turn, would enable Volunteer to conduct further expansion and serve still more consumers who are presently without natural gas. The second delivery point, which East Tennessee's proposed facilities would provide, would afford Volunteer and its customers the security of an alternate supply point in the event of any emergency conditions affecting gas deliveries on either side of Johnson City.

Deliveries of natural gas to Unicoi would introduce such service to the people of an area heretofore entirely without its numerous advantages. Unicoi's service area would be able to compete in attracting industries on an equal basis

with other areas which boast the availability of natural gas. Unicoi County is a "distressed" area. The industrial interruptible load provided by these projects would help East Tennessee to offset the probable loss of the interruptible sales to the Atomic Energy Commission at Oak Ridge, Tennessee.

The Volunteer Project

East Tennessee applied for additional service to Volunteer and for new service to the Unicoi District project in Tennessee. The application appears indivisible in character, as one is not feasible without the other.

East Tennessee estimates that the cost of this expansion will be $381,010. The facilities consist of 14.5 miles of 6-inch pipeline and two metering and regulating stations. East Tennessee does not operate any compressors on its system. With the addition of the above-described facilities and an increase in its maximum purchase demand of 1,685 Mcf over what it would be without this new project, East Tennessee maintains that it will be able to make the estimated third-year peak day deliveries of 2,170 Mcf to Volunteer and the Unicoi District.

East Tennessee purchases its entire gas supply from Tennessee Gas Transmission Company under a gas sales contract which provides for deliveries of up to 199,958 Mcf per day (at 15.025 psia). East Tennessee estimates its 1965 over-all system peak day requirements at 165,864 Mcf per day, including the proposed service, and estimates that approximately 10,000 Mcf per day of its 1965 peak day requirements will be met by withdrawals from line pack in accordance with East Tennessee's usual mode of operation.

In view of the additional gas available from Tennessee and its ability to withdraw from line pack, it appears that East Tennessee's system capacity and gas supply would be adequate to deliver the proposed additional volumes without impairing its ability to maintain proper service to its existing customers.

The additional interruptible service proposed would tend to offset the loss of interruptible sales on its system due to the decrease intakes by the Atomic Energy Commission at Oak Ridge Plant in Tennessee. East Tennessee proposes to finance its proposed project from general funds. The Staff does not question East Tennessee's ability to finance its expansion.

In view of the *de minimus* volume of gas involved in the proposed additional sale to Volunteer (165 Mcf on a peak day, third year) and Volunteer's sales experience in the Johnson City area, it is not necessary to go into Volunteer's proposed expansion in detail. The proposed rate of attachment of residential and commercial customers appears reasonable in view of the proven ability of Volunteer to develop a market in Johnson City. It is noted that the Staff does not question Volunteer's ability to finance the project as proposed. However, the Unicoi project is the remaining crucial issue in this proceeding.

Economic Feasibility of the Unicoi Project

The area which Unicoi proposes to serve is in and near Erwin and Unicoi, Tennessee. Heavy unemployment occurred in this area in 1955 when the Southern Pottery Plant was shut down under the weight of competition, resulting in the loss of over 1,000 jobs. In order to compete with other areas having natural gas, the community leaders there formed a utility district for the purpose of bringing natural gas into the area. Unicoi retained Porter, Barry & Associates, Consulting Engineers, to prepare an engineering study of its franchised service area and to design its natural gas distribution system. The study (Exhibit 13), prepared under the supervision of Mr. Barry, suggests the feasibility of a natural gas distribution system within the proposed service area, *viz.* the towns of Erwin and Unicoi and adjacent areas. The population of Unicoi's proposed

service area, as shown in the study, is estimated to be 9,000. There were 1,955 houses adjacent to the proposed distribution system.

The cost of constructing Unicoi's distribution system proper is $760,000 which is attributable principally to some 328,800 feet of 1-inch to 6-inch pipe. Unicoi has entered into an agreement with Southern Bond Company, subject to the issuance of the necessary authorization by the Commission, whereby Southern Bond would purchase the gas revenue bonds. The par value of these bonds is $1,155,000, which would be discounted to Southern Bond at 90 percent.

Based on estimates for a construction contract, and the financing agreement, Unicoi claims a 1.54 debt coverage ratio based on a third-year cutoff and a thirty-year bond issue (Exhibit 13, table 15A).

The economic feasibility of the proposed Unicoi project was presented by Witness Barry. After reading this witness' testimony and listening to his answers under oath to the many questions posed by the parties, the Examiner places complete confidence in Mr. Barry's professional qualification and personal integrity. However, the aggregate of his answers leads to the finding that Mr. Barry's conclusions about the economic feasibility of the Unicoi project are not supported with facts of record.

Mr. Barry stated that approximately 50 percent of the space heating residential and small commercial customers shown on Table 6 of Exhibit 13 would use gas for base load; but the basis for his estimate is not in the record. Approximately 100 of these "potential customers" were contacted; but none were asked whether they desired gas service or not. These 100 of the total potential of 1955 were simply asked what fuel they were using and what it cost. If the record showed that a substantial number of "potential customers" had been shown cost comparisons, based on proposed rates which induced them to make an indication of interest toward natural gas, we could look more favorably on the estimates of attachments. However, the record does not so show; but it does show that all of the "potential customers" are now being served with electricity for some purposes (Tr. 433) and based on Witness Barry's own cost comparison, page 2, Schedule B, Exhibit 13, electricity is substantially cheaper than gas for hot water heating and cooking in this area. Since only 100 people were contacted we have no way of knowing from what fuel the witness expects to convert these people to natural gas. Insofar as base load is concerned the only estimate (given from the witness stand and apparently from memory) is not convincing. He stated that a much higher percentage than 5 percent (the estimate given for space heating conversions from butane) of the base-load customers will come from butane, yet the Census for Housing for Tennessee shows that less than 1.5 percent of the cooking fuel market in the whole of Unicoi County uses "Bottled, Tank or L.P. gas" for cooking and still less use it for water heating. From the above discussion of the base-load estimates and their importance in this case it can only be concluded that the economic feasibility of the project is highly doubtful.

Applicant's witness failed to give a satisfactory answer to the Staff's questions about the estimates for the residential and small commercial heating load. If we were to assume, as Witness Barry does, that half of his estimated small commercial and residential customers would also use gas for base load, an error of less than 3 percent in the estimate of heating attachments for this class would result in a debt coverage of less than the required 1.5. It is imperative, therefore, that these estimates have a firm foundation in the record. Such, however, is not the case.

Witness Barry begins with 1955 residents and small commercial establishments as his total potential for this class. He arrives at this figure by counting

all residences and small commercial establishments in close proximity to his proposed line. He then states that based on his past experience 42 percent of these will be attached in the first year, 54 percent by the end of the second year and 59 percent at the end of the third year (Tr. 363). As noted above only 100 of this total of 1955 "potential customers" were surveyed and none of these were asked if they would buy natural gas if available. We do not know what fuel is being consumed presently by these "potential customers" but we do know that the witness' own comparative fuel study (page 2, Schedule B, Exhibit 13) shows that it is approximately $65.71 per year cheaper for these consumers to use coal rather than natural gas for heating and $79.13 per year cheaper to use coal for heating, cooking and water heating than to use natural gas for the same purposes. Perhaps the convenience of natural gas would compensate these customers for the additional expense, but we have no way of knowing this from the record. This comparison of fuel costs between coal and natural gas is particularly significant because it is estimated that approximately ⅓ of the heating load will be made up of converts from coal (Tr. 404).

Witness Barry estimates that 45 percent of the heating load will come from fuel oil but his own comparative cost study shows that a householder that switched from fuel oil to natural gas for heating purposes would only save $7.95 per year. The Staff thinks that this is not enough incentive.

Witness Barry expects to attach to the Unicoi District system 48 medium commercial customers and 15 large commercial customers by the end of the third year of operation. He does not know the totals of these types of establishments in the area to be served. He expects us to accept his judgment without knowing anything about the facts upon which his judgment is based. These prospects were asked for their bare cost of present fuel. Of these 15 large commercials, 12 are presently using coal and of the 48 medium commercials, 32 are now using coal. To the bare cost of coal, which was less than gas in every case the witness added certain things, including "intangibles" (Tr. 397) to arrive at his opinion that these large and medium commercial establishments would convert to natural gas. Mr. Barry's survey did not show any indications of interest on the part of these "potential customers" toward natural gas.

The only positive indications of intent to purchase natural gas in the record are the three industrial interruptible contracts. Yet even these specify no quantities. It seems, therefore, that no obvious hardship would be imposed upon these industries should natural gas not be available.

In summary, all that we have in this record to support the economic feasibility of this project are conclusions of Witness Barry, but the record lacks facts upon which his conclusions were based. The record does not yet contain sufficient evidence to warrant a finding that the proposed Unicoi project is economically feasible.

Assuming that applicant's basic engineering report is reliable, the record should show that, based on a third-year leveling of sales, the debt coverage ratio on a 30-year bond issued will be 1.5. *Cf. Panhandle Eastern Pipe Line Co., et al.*, 15 FPC 1421, 1427–1429.

The Federal Power Commission is properly concerned with the economic feasibility of distribution projects proposed to be served by a party under its jurisdiction because of the adverse effects that failure of such a project (or partial failure) would have on other customers of the jurisdictional pipeline. Should certification here be granted, the failure of the distributors (Volunteer and Unicoi District) to realize their expectations of gas purchases from East Tennessee would result in idle facilities on East Tennessee's system, the cost of which would necessarily be borne by its other customers.

Further, it would be contrary to the public interest to give consumers false security that natural gas at reasonable rates will be available for the foreseeable future if that is not the case. Consumers can be expected to convert their home facilities on the basis of the initial rates of the distributing agency. Should the expected revenues of the distributor be less than expected for any reason, the rates to consumers undoubtedly would be increased. But at this later date, these consumers may not be able to readily convert back to a less expensive fuel should they desire to do so.

Accepting all of the estimates of Witness Barry and his exhibit, the debt coverage ratio would be 1.54 (Exhibit 13, Table 15A), barely over the required 1.5 discussed above. A slight error in estimating the base-load attachments will drop the coverage below 1.5. The numerical value of this 1.5 coverage factor is not decisive of and by itself, but is significant as an indicator of future financial stability, and is to be considered in conjunction with the basic factors through which it is evolved in measuring the over-all feasibility potential of a given proposed enterprise. *In re Village of Franklin, Illinois*, 17 FPC at p. 119. In *Panhandle, supra*, the Commission discussed at some length appropriate criteria for the determination of financial and economic feasibility. Debt service coverage ratios were found to be an important consideration. There is implicit in the Commission's remarks that a 30-year bond maturity schedule requires a minimum third-year coverage of 1.5 times. That coverage is not apparent here.

East Tennessee places much reliance on the testimony of Mr. Inman, the owner of the Southern Bond Company in Jackson, Mississippi. Witness Inman stated that he wanted to purchase the bonds, because he hoped to sell them at a profit. It is possible that the issuance by this Commission of a certificate of public convenience and necessity may be erroneously taken by potential purchasers of bonds as assurance of the financial soundness of the proposal. *Cf. Carolina Natural Gas Corp.*, 10 FPC 515. Testimony that a project is financeable is usually based on the assumption that the project is economically feasible. Without an economically feasible project, the prospects of successful financing are remote. *Cf. Board of Mayor and Alderman*, 21 FPC 853, 854. Furthermore, the inquiry into the economic feasibility of a project is, *inter alia*, intended to consider the potential investor. *Cf. Atlantic Seaboard Corp.*, 7 FPC 926, 929; *In re Mississippi River Fuel Corp.*, 9 FPC 198, 208.

Witness Keys, the secretary of the Unicoi County Utility District, gave convincing testimony that the region proposed to be served by natural gas is an economically depressed area. Natural gas service could be helpful because it would attract industry. He further stated that already one plant (The Storm Steel Ball Company) has moved into the area allegedly in expectation that naural gas would be available. However, the area's industrial and population growth is not yet apparent. Query, will the natural gas service effectively cure the economic maladies of the area, or will the prevailing depression undermine the economic feasibility of the project. Thus far applicants failed to supply sufficient evidence justifying a finding of economic feasibility in the distressed area of Unicoi County. The evidence of record, as it stands now, raises serious doubt that the estimated revenues will produce earnings sufficient to meet interest payments and reduce the bond debt of the Unicoi County Utility District.

In the light of that conclusion and because the application asks for certification of the Unicoi and the Volunteer projects as a unit, it is unnecessary to discuss further the question whether certification of additional natural gas service in Volunteer is warranted.

Notwithstanding applicant's failure to make an adequate showing of economic feasibility in the instant proceedings after having been afforded a chance to do so, the circumstances are such as to warrant giving them opportunity to make further showing. Under such circumstances as are here present, there is precedent for allowing applicant an opportunity to make a further showing. *Panhandle Eastern Pipe Line Co., et al.*, 15 FPC 46, 73. Given opportunity for the presentation of revised studies, applicants may be able to make a sufficient showing that the projects will be economically feasible and capable of being financed on a more conservative basis than the original presentation, which was based on a 30-year maturity schedule for the bond issues. Accordingly, the findings and conclusions herein are made without prejudice to the applicant.

FINDINGS AND CONCLUSIONS

Upon consideration of the evidence adduced and the briefs of counsel, it is found and concluded, in addition to the findings and conclusions above set out, that:

(1) Applicant, East Tennessee Natural Gas Company, a Tennessee corporation having its principal place of business in Knox County, Tennessee is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 3, 1949, in Docket No. G–1065 (8 FPC 836).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, were proposed to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction and operation thereof by applicant are subject to the requirements of Subsections (c) and (3) of Section 7 of the Natural Gas Act.

(3) Applicant failed to prove that the construction and operation of the proposed facilities and the proposed sale and delivery of natural gas by East Tennessee to Volunteer and Unicoi are required by the public convenience and necessity, and that a certificate therefor should be issued at this time.

(4) The application herein (as supplemented) should be denied.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

The application (as supplemented) filed herein is denied, but without prejudice to the applicant.

ALLEN C. LANDE,
Presiding Examiner.

SUPPLEMENTAL DECISION

UPON APPLICATION TO CERTIFICATE NATURAL GAS FOR VOLUNTEER AND UNICOI, TENNESSEE

(Issued January 18, 1963)

LANDE, *Presiding Examiner*: This is a reopened certificate proceeding pertaining to an application under Section 7(c) of the Natural Gas Act in which East Tennessee Natural Gas Company (or Applicant) requests authority to construct and operate approximately 14.5 miles of 6-inch lateral pipeline and appurtenant facilities for the purpose of selling and delivering additional natural gas to an existing customer, Volunteer Natural Gas Company (Volunteer)

for resale in Johnson City, Tennessee, and the initial gas requirements of Unicoi County Utility District (District or Unicoi) for resale in and near the towns of Unicoi and Erwin, Unicoi County, Tennessee. East Tennessee's original application which was filed with the Commission on January 24, 1961, was supplemented on July 7 and August 18, 1961.

By order issued April 30, 1962, the Commission permitted Fuels Research Council, Inc., National Coal Association, and United Mine Workers of America (or Interveners), to intervene in this proceeding. The initial hearing on the application commenced as scheduled on May 23, 1962, and lasted three days. East Tennessee presented seven witnesses in support of its application. Neither Staff nor the Interveners presented any evidence, but both conducted extensive cross-examination of the witnesses presented by East Tennessee, and they also filed briefs. Applicant filed an initial brief and a reply brief.

The first decision of the Presiding Examiner in this proceeding denying the certificate of public convenience and necessity sought pursuant to Section 7 of the Natural Gas Act was issued July 30, 1962. The facts and findings, more fully described in said first decision, are that East Tennessee fully justified the proposed service to the Volunteer project and that applicant is able and willing to finance this part of the proposed expansion. However, since applicant did not consider it desirable to serve either the Volunteer project or the Unicoi District project separately, it is essential that the evidence in the instant proceedings support the application for both projects as a proposed joint expansion. The Examiner concluded that the engineering report and supporting testimony initially submitted by the Unicoi County Utility District was deficient in that the conclusions about the economic feasibility of the Unicoi project were not supported with facts of record. Accordingly, the application was denied but without prejudice to the applicant. The Examiner was of the opinion that the applicant should be given an opportunity to remedy the factual deficiencies in the record.

On August 22, 1962, East Tennessee Natural Gas Company filed with the Commission a petition to reopen the record for the purpose of submitting additional economic feasibility data and testimony. By Order of the Commission issued August 30, 1962, this petition was denied on the grounds that sufficient facts had not been submitted warranting reopening.

On October 10, 1962, applicant again filed a petition to reopen this proceeding. Attached to this petition was a revised engineering study and further proposed testimony. Applicant submitted that this new evidence will cure the deficiencies which the Examiner outlined in his decision.

No objection to the granting of the petition has been filed.

The Commission, in accordance with Section 1.33 of the Rules of Practice and Procedure, reopened this proceeding and remanded the case to the Presiding Examiner for further hearing to permit the applicant to present additional evidence in the proceeding with opportunity for cross-examination and presentation of evidence afforded to other parties to the proceeding.

The hearing on remand was held as duly scheduled on December 10, 1962. East Tennessee presented new evidence sponsored by witnesses Barry and Cantrell. The Staff conducted extensive cross-examination of East Tennessee's witnesses and evidence. It is noted that the Interveners were not present during the remand phase of the hearing (Tr. 462). East Tennessee filed its initial brief on December 21, 1962. Neither Staff nor the Interveners presented any evidence during this remand phase of the proceeding.

On January 4, 1963, the Staff filed a memorandum brief, taking the position that the revised engineering report of the Unicoi District, and the further testimony concerning it, cure the deficiencies in the original record of this proceeding.

The Staff recommended that the application of East Tennessee Natural Gas Company in this proceeding should be granted.

On January 14, 1963, East Tennessee Natural Gas Company filed a belated motion for omission of intermediate decision procedure. Pursuant to Section 1.30(c)(3) of the Commission's Rules of Practice such a motion should have been filed "not later than five days" after the conclusion of the hearing on December 10, 1962. Applicant urges that an exception be made in this case in order to expedite the proceeding. Since the examiner's supplemental decision is already completed the new motion can only delay finalization of the proceeding. Furthermore, the Interveners thus far did not formally withdraw from this docket and, therefore, it is more orderly to proceed with the issuance of a supplemental decision herein.

The Prior Evidence

In the initial decision issued in this matter on July 30, 1962, the Presiding Examiner recommended denial of East Tenessee's application because the Examiner was of the opinion that the engineering report and supporting testimony submitted by Unicoi was deficient in that the conclusions about the economic feasibility of the Unicoi Project were not supported with facts of record. Specifically the Examiner was of the opinion that there was no firm foundation in the record for the estimate of Unicoi's engineering witness, Mr. Simmons J. Barry, of the number of customers within the Unicoi County Utility District who would convert from other fuels to gas nor for his estimate of gas usage by such potential customers. In his decision the Examiner was also of the opinion that there was no support in the record for Witness Barry's conclusion that 59 percent of the potential residential and small commercial customers would use gas at the end of the third year for space heating and that one-half of such space heating customers would also use gas for cooking and water heating; that the record failed to show whether the potential customers were asked directly if they desired gas service; that the record failed to show that the potential customers had been advised as to the comparative costs between gas and other fuels; that the record did not show the present fuel of customers assumed to be converting to gas; that there was no basis shown in the record that having gas available would justify the incurrence of the cost of converting from coal to gas; that the small saving to be realized by a switch from fuel oil to gas was insufficient, without more incentive, to justify the conclusion that those heating with oil would convert to gas; and finally, that there was no justification in the record for the stated revenues assumed to be generated for debt coverage of 1.54 on the basis of the estimated sales for the third year of operation.

The New Evidence

Unicoi conducted a completely new customer survey along the principles laid down by the Commission in *Village of Franklin, Illinois, et al.*, Docket No. G–8471, *et al.*, 17 FPC 118. This new survey (Exhibit No. 14) was completed in September 1962. The facts and figures shown in this new survey demonstrate that (1) the proposed project of Unicoi is now economically feasible and (2) East Tennessee's proposal to serve Unicoi is now economically feasible. In fact the present record shows a debt ratio coverage of 1.72 on the basis of a 30-year operating period as opposed to the debt ratio coverage of 1.54 as originally shown in the initial proceedings in this matter.

Public Convenience and Necessity

The relevant and uncontroverted evidentiary matter adduced during the reopened hearing, which is outlined below, demonstrates that East Tennessee's

proposed service to Unicoi County Utility is now economically feasible and that therefore the issuance of a certificate for both, the proposed initial service to Unicoi and the additional service to Volunteer, is now required by the public convenience and necessity. In other words, applicant has now fully remedied the initial deficiencies in the record.

Applicant showed that all potential medium and large commercial customers, as well as all industrial interruptible customers, were interviewed during the course of the September 1962 survey. The use of natural gas by these three classes of customers by the end of the third year of operation represents the volumes of gas required to convert actual present fuel use to natural gas without reflecting any increase for indicated future increase in fuel usage. The record establishes that the above estimates of sales are reasonable and that the gross revenue for the third year of operation in the amount of $348,298 can be attained.

By actual count as of September 1962 there are 2,487 occupied residences and operating small commercial establishments adjacent to the projected Unicoi distribution system. Of this total 1,909 were interviewed and were shown an estimate of what the use of gas would cost as opposed to the cost of fuels they are presently using. Of those interviewed 76 percent indicated a desire for gas at the end of the third year of operation. On the basis of the evidence presented and the supporting testimony, it is reasonable to conclude that at the end of the third year of operation, of the total of 2,487 occupied residences and operating small commercial establishments located adjacent to the distribution system, 1,468 (or 59 percent) would convert to natural gas for space heating, and 249 (or 10 percent) of such customers would use gas for cooking and water heating purposes. On the basis of an annual usage of 96 Mcf for the 1,468 space heating customers and an annual usage of 30 Mcf annually for cooking and water heating the total annual sales of Unicoi to such customers at the end of the third year of operation will be 148,398 Mcf, resulting in annual revenues of $219,460.

Operating costs to Unicoi of $206,513 in the third year of operation seem reasonable. Thus, East Tennessee's proposal, including the additional service to Volunteer, should realize a rate of return of 8.44 percent or a contribution to mainline facilities of $5,943 at the end of the third year of operation. The net revenue available to Unicoi for debt coverage is $4,044,564, resulting in a debt ratio coverage of 1.72.

The new facts of record show that East Tennessee's proposed service to Unicoi will impose no burden on the other customers served by East Tennessee.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed in this reopened phase of these proceedings, as well as the record and briefs in the first phase thereof, the Presiding Examiner finds and concludes that:

(1) Applicant, East Tennessee Natural Gas Company, a Tennessee corporation having its principal place of business in Knox County, Tennessee, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 3, 1949, in Docket No. G–1065 (8 FPC 836).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale and delivery of natural gas by East Tennessee to Volunteer and Unicoi are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission, that:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing the East Tennessee Natural Gas Company to construct and operate the facilities and to sell natural gas as more fully described in the application in this proceeding.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued in paragraph (A) shall be deemed accepted and of full force and effect, unless refused in writing and under oath by East Tennessee Natural Gas Company within thirty days of the issuance of this order.

(D) East Tennessee Natural Gas Company shall report to the Commission in writing, under oath, the date of commencement of the service to be rendered to the Unicoi County Utility District.

ALLEN C. LANDE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G-16235; PACIFIC NORTHWEST PIPELINE CORPORATION, DOCKET NO. G-16237; COLORADO INTERSTATE GAS COMPANY, DOCKET NO. G-16904

ORDER DENYING MOTIONS

(Issued February 14, 1963)

El Paso Natural Gas Company (El Paso) on January 22, 1963, and Colorado Interstate Gas Company (Interstate) on January 24, 1963, each filed a motion to terminate the intervention in this proceeding of Tennessee California Gas Transmission Company and California Gas Transmission Company (Tennsubs), subsidiaries of Tennessee Gas Transmission Company (Tennessee), and to reject the exceptions to the decision of the presiding examiner tendered for filing by Tennsubs.

Tennsubs and Gulf Pacific Pipeline Company (Gulf Pacific) filed on February 1, 1963, a motion to join Gulf Pacific, an affiliate of Tennsubs and a wholly owned subsidiary of Tennessee, as a party intervener in this proceeding.

El Paso and Interstate stated substantially the same grounds for their respective motions: namely that this Commission permitted Tennsubs to intervene in this proceeding on the sole basis of Tennsubs' allegation that they had: "* * * vital competitive interests which can be protected only by intervention * * *"; that those alleged competitive interests were based upon the application of Southern California Edison Company (Edison) in Docket No. CP61–172 and the applications of Tennsubs in Docket Nos. CP61–173 and CP61–174 for the construction and operation of facilities of the "Pemex" project designed to transport Texas and Mexico gas to Los Angeles for use as boiler fuel by Edison; that by order issued January 3, 1963, 29 FPC 25, the Commission permitted withdrawal of the Pemex applications; that, therefore, Tennsubs no longer have a competitive interest in this proceeding and that further participation by them is neither necessary nor in the public interest.

Tennessee has acted as agent for Edison in an attempt to secure for it a supply of natural gas. Tennsubs were the media through which the gas would have been made available to Edison. El Paso and Interstate have not filed a motion to terminate Edison's intervention in this proceeding although the withdrawal of Edison's Pemex application was effected by the same notice of withdrawal and order as was the withdrawal of Tennsubs' applications. El Paso and Interstate did not attempt to explain their differentiation in this regard.

We find, therefore, that El Paso and Interstate have not shown that Tennsubs' interest in the Rock Springs project has ceased or that their intervention is no longer in the public interest.

We find that it is neither feasible nor in the public interest to attempt to strike from the record the evidence which was adduced by Tennsubs.

Coming now to the motion of Tennsubs and Gulf Pacific Pipeline Company to join Gulf Pacific as a party intervener in this proceeding, it is alleged in the motion and in Tennsubs' answer, which is incorporated in the motion, that Gulf Pacific is a wholly owned subsidiary of Tennessee Gas Transmission Company; that it is the corporate instrument created to effect the transportation of gas for the proposed revised project; that it proposes to file a competitive bid to procure and transport gas for the Department of Water and Power of the City of Los Angeles as well as for Edison; that if admitted as an intervener, it will participate with Tennsubs and will be represented by the same counsel and will present the same arguments as Tennsubs.

Gulf Pacific has not demonstrated that its participation in this proceeding is necessary or in the public interest. Its interests are adequately represented by Tennsubs who we have determined should continue as parties to the proceeding.

El Paso and Interstate apparently misconceive the effect of the withdrawal of Tennsubs applications constituting the so-called Pemex project. The effect of the withdrawal of those applications was to place Tennessee or any subsidiary thereof filing an application in the position of any new applicant coming before the Commission with a proposal to serve gas in competition with another applicant.

The Commission further finds:

(1) El Paso Natural Gas Company and Colorado Interstate Gas Company have not shown good cause to terminate the intervention in this proceeding of Tennessee California Gas Transmission Company and California Gas Transmis-

sion Company and to reject exceptions to the decision of the presiding examiner tendered for filing by said companies.

(2) Good cause has not been shown for permitting Gulf Pacific Pipeline Company to intervene in this proceeding.

The Commission orders:

(A) The motions of El Paso Natural Gas Company and Colorado Interstate Gas Company are hereby denied.

(B) The motion of Tennessee California Gas Transmission Company, California Gas Transmission Company and Gulf Pacific Pipeline Company is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

AMENDMENT OF PART 34 OF REGULATIONS UNDER THE FEDERAL POWER ACT—PRESCRIBING THE CONTENTS OF APPLICATIONS FOR THE ISSUANCE OF SECURITIES, DOCKET NO. R-225

ORDER NO. 262*

ORDER PRESCRIBING REVISED REGULATIONS

(Issued February 14, 1963)

The Commission has under consideration in this proceeding the amendment of Part 34 of its Regulations under the Federal Power Act by revising § 34.2 thereof entitled "*Contents of application*" and § 34.3 entitled "*Required exhibits*". The sections prescribe the basic information which is to be submitted in support of applications for authorization, pursuant to section 204 of the Federal Power Act, for the issuance of securities and the assumption of liabilities.

The amendments are designed to rearrange and simplify the format in which the required information must be submitted, relegating to exhibit form certain information heretofore placed in the body of the application and reducing the number of copies of certain exhibits. The only change necessitating the submission of additional information is § 34.2(j) which requires more detailed information regarding construction programs for which funds from sale of securities may be utilized.

General public notice of the proposed rulemaking was given by publication of notice in the Federal Register, on November 15, 1962 (27 F.R. 11289), and by mailing copies thereof to interested persons, including public utilities, and to State and Federal agencies. Comments were received from three public utilities, one utility service company and one public power association.

Stone & Webster Service Corp. suggested that the information regarding construction programs and expenditures called for in § 34.2(j)(1) and (2) be submitted in exhibit form. We have adopted this suggestion and have changed these subparagraphs accordingly. Northern States Power Company commented on the map required to be filed under § 34.3 as Exhibit P and suggested that the scale of not less than 16 miles to the inch be eliminated inasmuch as such a scale would require large maps for some systems serving extensive but sparse territory. We have adopted this suggestion and have substituted the requirement that the maps shall be of sufficient scale as will show clearly the location of the

*Published in the Federal Register on February 19, 1963, 28 F.R. 1538.

proposed additions and improvements of generating, transmission and major substation facilities for which the securities are to be issued.

The comments of Northwestern Public Power Association were confined to the public notice given upon the filing of applications for issuance of securities and stated they were not in a position to comment on the format of the application.

Gulf States Utilities Co. and Florida Power Corp. indicated that the additional information required to be filed regarding the construction program under § 34.2(j)(7) would be unduly burdensome particularly in respect to projects contemplated for completion in the somewhat distant future for which financial arrangements must be made considerably in advance of determining the final details and specifications of particular items. First, we wish to point out that the information respecting future construction is on a estimated and not on a finalized basis, and secondly, the information requested is no more than what applicants have in the past been submitting pursuant to special requests of the Commission's staff. We feel that the information is essential to the administration of section 204 of the Federal Power Act. Accordingly, with the exception of the changes noted above, we are adopting the revision as originally proposed in the notice.

The Commission finds:

Adoption and promulgation of the proposed amendments are necessary and appropriate for the purposes of administration of the Federal Power Act.

The Commission, acting pursuant to authority granted by the Federal Power Act, as amended, and particularly sections 204 and 309 thereof (49 Stat. 850, 856; 16 U.S.C. 824c, 825h), *orders:*

(A) Part 34, Subchapter B—Regulations under the Federal Power Act, Chapter I, Title 18 of the Code of Federal Regulations is amended by revising §§ 34.2 *Contents of application* and 34.3 *Required exhibits* to read as set forth in the attachment hereto.*

(B) These amendments to the Commission's Regulations under the Federal Power Act, shall become effective April 1, 1963.

(C) The Secretary of the Commission shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP62-69

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 14, 1963)

On January 10, 1963, United Gas Pipe Line Company (Movant) filed in Docket No. CP62-69 a motion to amend the order issued in said docket on July 19, 1962, 28 FPC 188. The order of July 19, 1962, authorized Movant to construct and operate facilities and to sell natural gas to Othur K. Herring, d/b/a Herring Utilities (Herring), for resale and distribution in the northeast section of Livingston Parish, Louisiana. The order further provided that the facilities should be constructed and placed in actual operation within 90 days from the date on which the order was issued.

Movant now requests that the order of July 19, 1962, be amended to provide for

*Attachment omitted in printing.

the sale and delivery of natural gas to be made to Gas Utility District No. 1 of Livingston Parish, Louisiana (District), in place of Herring. The District has succeeded to Herring's obligations to render service in the northeast section of Livingston Parish and has requested Movant to furnish gas for resale and distribution in that area.

By notices issued October 11, 1962, and December 28, 1962, extensions of time were granted through February 17, 1963, within which to complete construction and place in actual operation the facilities authorized by the order of July 19, 1962. In its instant motion Movant requests that the time be further extended through June 1, 1963.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order of July 19, 1962, in Docket No. CP62–69 be amended to authorize the sale of natural gas for resale and distribution to Gas Utility District No. 1 of Livingston Parish, Louisiana, in lieu of Othur K. Herring, d/b/a Herring Utilities.

(2) The time within which the facilities necessary to make the subject sale should be completed and placed in actual operation should be extended to June 1, 1963.

The Commission orders:

(A) The Commission's order of July 19, 1962, in Docket No. CP62–69 be and the same is hereby amended to authorize the sale of natural gas for resale and distribution to Gas Utility District No. 1 of Livingston Parish, Louisiana, in lieu of Othur K. Herring, d/b/a Herring Utilities.

(B) The facilities necessary to make the subject sale should be completed and placed in actual operation by June 1, 1963.

(C) In all other respects said order of July 19, 1962, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63–29

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 15, 1963)

On July 30, 1962, Cities Service Gas Company (Applicant) filed in Docket No. CP63–29 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and to render service, all as more fully set forth in the application.

The proposed facilities are described as follows:

To tap Applicant's 12-inch Pittsburg pipeline, construct a meter setting with appurtenant regulator equipment in Crawford County, Kansas, and to sell natural gas therefrom to The Gas Service Company for resale and distribution in and about Langdon Lane, Kansas, also to tap Applicant's 8-inch pipeline, in Barber County, Kansas and to construct a meter setting with appurtenant regulator facilities, to sell therefrom natural gas to the City of Sharon, Kansas, for resale and distribution in that city and the area. Natural gas in now being supplied from another source that is threatened with depletion in the near future.

The estimated peak day and annual requirements for the two respective communities are as follows:

Year	Langdon Lane, Kans.		City of Sharon, Kans.	
	Mcf at 14.73 psia		Peak day	Annual
	Peak day	Annual		
First	135	11,300	24	2,584
Second	160	13,400	24	2,584
Third	160	13,400	24	2,584

The proposed sale by Applicant to The Gas Service Company will be made under Applicant's Gas Rate Schedules F–2, C–2, and I–2. The sale to City of Sharon will be made under Applicant's FPC Gas Rate Schedules F–1, C–1 and I–1.

The estimated cost of the proposed facilities required to serve Langdon Lane is $1,280.00 and the estimated cost for facilities to serve the City of Sharon is $3,000.00. Applicant will finance these amounts from cash on hand.

Service to these customers will not impair Applicant's ability to serve its existing customers.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 7, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, is a natural gas company within the meaning of the Natural Gas Act, as is stated in (3) at page 4 of the application on file herein and as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsection (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale and delivery of natural gas, as hereinbefore described are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations, and that the construction of the facilities authorized by this order should be completed

and said facilities placed in actual operation within six months from the date on which this order issues.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Cities Service Gas Company to construct and operate the facilities hereinbefore described, and to sell and deliver natural gas for resale to The Gas Service Company and the City of Sharon, under the terms of the respective rate schedules above stated.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(C) The construction of the facilities authorized by this order shall be completed and said facilities shall be placed in actual operation within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EASTERN SHORE NATURAL GAS COMPANY, DOCKET NO. CP63-113

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 15, 1963)

On November 1, 1962, Eastern Shore Natural Gas Company (Applicant) filed in Docket No. CP63-113 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing it to transport 4,000 Mcf per day of natural gas in addition to the 4,000 Mcf per day volume presently being transported through its facilities for the term from December 1, 1963 to November 30, 1964.

The additional 4,000 Mcf per day of gas to be transported as aforesaid will be supplied by Transcontinental Gas Pipe Line Corporation for the account of Delaware Power and Light Company. The transportation of the gas will take place between the point of interconnection of Applicant's facilities with the facilities of Transcontinental Gas Pipe Line Corporation near Parkersburg, Pennsylvania to an existing point of connection with the Delaware Power Company's facilities near Newark, Delaware.

Delaware Power and Light Company will use the gas so transported to meet its increased demands upon its system pending the time when authorization and construction of its own facilities to perform the services can be effectuated, which time is estimated to be about November 30, 1964.

The rates for the proposed transportation service are those set forth in Rate Schedule T-1 to Applicant's FPC Gas Tariff, Original Volume No. 1.

Pursuant to due notice, a public hearing was held in Washington, D. C., on February 7, 1963, respecting the matters involved in and the issues presented by the application. Delaware Power and Light Company filed a petition to inter-

vene in support of the application and the disposition made herein. No other petition to intervene or protest to the granting of the application has been received. Staff Counsel moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision herein pursuant to Section 1.30(c) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Eastern Shore Natural Gas Company is "a natural-gas company" within the meaning of the Natural Gas Act and subject to the jurisdiction as averred in the application filed herein, as heretofore found by the Commission in its order of November 29, 1957 in Docket No. G–12200 (18 FPC 710).

(2) Applicant is presently transporting natural gas through its existing facilities to the Deleware Power and Light Company and it is through these same facilities that the proposed additional transportation for the period December 1, 1963 through November 30, 1964, is to be conducted. No construction of new facilities is here being proposed by the applicant.

(3) Transcontinental Gas Pipe Line Corporation was authorized by order of the Commission to supply additional gas service to its customers on May 17, 1962, in Docket No. CP62–86.

(4) Applicant is able and willing to do properly the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The transportation service proposed by the Applicant of natural gas for Delaware Power and Light Company for public distribution and sale by it is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) A request made during the public hearing by Staff Counsel for the omission of the intermediate decision procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record, and not having been denied by the Commission is granted pursuant to Section 1.30(c)(1) of the said rules.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Eastern Shore Natural Gas Company, to transport additional 4,000 Mcf per day of natural gas for Delaware Power and Light Company's account for the period December 1, 1963 through November 30, 1964, all as more fully described in the application.

(B) The certificate issued by paragraph (A) above, and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act particularly Section 157.20 of said Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

THE MANUFACTURERS LIGHT & HEAT COMPANY, DOCKET NO. CP63–155

FIDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 15, 1963)

On December 5, 1962, The Manufacturers Light and Heat Company (Applicant) filed in Docket No. CP63–155 an application pursuant to Section 7(c) of the

Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963 and the operation of relatively minor natural gas facilities for service to existing markets, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in constructing and replacing relatively small-scale facilities without the delay incident to the filing and processing of individual certificate applications.

The proposed facilities will not exceed a maximum cost of $1,200,000, with no single project to exceed a cost of $300,000.

The proposed service will be rendered in existing markets under presently filed rates. The proposed facilities will not be used to extend service to new market areas, to new direct industrial customers, or to develop new storage fields.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 5, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, The Manufacturers Light and Heat Company, a Pennsylvania corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 29, 1944, in Docket No. G-593, *et al.* (4 FPC 821).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) Public convenience and necessity require that Applicant should submit within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) location, (b) description, (c) facilities replaced, if any, (d) abandonment of service, if any: (e) capacity increase, if any, and (f) actual final costs.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should obtain such authorization as may be required from the Federal Power Commission or the West Virginia Public Service Commission for any abandonment of service that may result by the replacement of facilities as authorized herein.

(8) The certificate issued hereinafter should be limited to construction during the calendar year 1963 at a total cost not to exceed a maximum of $1,200,000, with no single project to exceed a cost of $300,000.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, The Manufacturers Light and Heat Company, to construct, replace and operate natural gas facilities for service to existing markets as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit by March 1, 1964, a statement showing by projects: (a) location, (b) description, (c) facilities replaced, if any, (d) abandonment of service, if any, (e) capacity increase, if any, and (f) actual final costs.

(D) Applicant shall obtain such authorization as may be required from the Federal Power Commission or the West Virginia Public Service Commission for any abandonment of service that may result by the replacement of facilities as authorized herein.

(E) The certificate issued by paragraph (A) above is limited to construction during the calendar year 1963 at a total cost not to exceed a maximum of $1,200.000, with no single project to exceed a cost of $300,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NOS. CP63–148 AND CP62–61

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND DISMISSING APPLICATION

(Issued February 15, 1963)

On November 27, 1962, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP63–148 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during a 12-month period, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

Concurrently with the application in Docket No. CP63–148 Applicant filed in Docket No. CP62–61 an application for renewal of the "budget-type" authorization

granted in the latter docket which authorization was to terminate on November 28, 1962. This extension was to be effective only for the period from November 28, 1962, until a new certificate would be issued in Docket No. CP63–148. Inasmuch as the instant order issues a certificate in Docket No. CP63–148, the application for renewal in Docket No. CP62–61 is rendered moot and may be dismissed.

The total cost of the proposed facilities will not exceed a maximum of $4,000,000, and no single project will exceed a cost of $500,000. The proposed facilities will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 7, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing on the date on which this order issues,

and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $4,000,000, with no single project to exceed a cost of $500,000.

(8) The application for renewal of "budget-type" authorization filed on November 27, 1962, in Docket No. CP62–61 should be dismissed as moot.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Panhandle Eastern Pipe Line Company to construct during the 12-month period commencing on the date on which this order issues the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Panhandle Eastern Pipe Line Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing on the date on which this order issues, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $4,000,000, with no single project to exceed a cost of $500,000.

(E) The application for renewal of "budget-type" authorization filed on November 27, 1962, in Docket No. CP62–61 be and the same is hereby dismissed as moot.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY, AND TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63–112

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 15, 1963)

On October 31, 1962, Tennessee Gas Transmission Company (Tennessee) and Transcontinental Gas Pipe Line Corporation (Transco) filed in Docket No. CP

63–112 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of an emergency interconnection between the pipeline systems of the two companies at a point where Tennessee's South Lousiana 20-inch line crosses Transco's 30-inch main line "A" in Allen Parish, Louisiana, all as more fully set forth in the application.

The proposed facilities will be utilized when either company is confronted with an emergency which can be alleviated by the deliveries of natural gas from the other when such deliveries can be made without impairment of service obligations to others. All emergency deliveries will be made on a gas-for-gas exchange basis.

The total cost of the proposed emergency interconnection is estimated to be $21,391. $10,405 will be shared equally between the two Applicants; Tennessee will spend $5,986 for tap and sidevalve equipment; and Transco will spend $5,000 for tap and sidevalve equipment.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 6, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(3) The facilities hereinbefore described, all as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the exchange of natural gas by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities and the exchange of natural gas by Applicants are required by the public convenience and necessity, and a certificate therefore should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record

and, not having been denied by the Commission is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby granted authorizing Applicants, Tennessee Gas Transmission Company and Transcontinental Gas Pipe Line Corporation, to construct and operate the proposed facilities and to exchange natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

(D) Applicants shall file appropriate rate schedules for the exchange service authorized herein, within 30 days of the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. RP61-19 AND RP62-7

ORDER CONSOLIDATING PROCEEDINGS, ESTABLISHING PROCEDURES, AND FIXING DATE FOR PRE-HEARING CONFERENCE

(Issued February 18, 1963)

On February 13, 1961, the Commission instituted a proceeding in Docket No. RP61-19 to determine whether the rates, charges and classifications of Midwestern Gas Transmission Company for sales from its Southern system are just and reasonable as required by section 5(a) of the Natural Gas Act.

On May 28, 1962, the Commission in Docket No. RP62-7 instituted an investigation of the justness and reasonableness of Midwestern's rates, charges and classification for sales and exchanges from its Northern system. It is now appropriate to order that RP61-19 and RP62-7 be consolidated for purposes of hearing and decision. Any party heretofore admitted as an intervenor in either of the dockets will be recognized as an intervenor in the consolidated proceeding.

The Commission is desirous that these consolidated proceedings be expedited to the fullest extent possible. To that end we will establish a procedure which incorporates, insofar as feasible in a section 5 proceeding, the principles of the Commission's Order No. 257, 28 FPC 791, establishing an expedited procedure for pipeline increased-rate cases. That procedure's goals include the early identification of the position of the parties on all relevant issues, the elimination from formal trial of all issues that can be resolved through stipulation, and the efficient trial of the remaining genuinely disputed issues.

Accordingly, it is appropriate that we fix a date upon which the Commission staff shall file and serve upon all the parties prepared testimony and exhibits

comprising its entire case-in-chief and a subsequent date upon which Midwestern shall file and serve prepared testimony and exhibits comprising its entire case. The prehearing conference for which we are providing shall be convened for the purposes of setting a date for the serving and filing of intervenor testimony and of whatever rebuttal testimony may be determined to be necessary, reaching a stipulation of the issues which can be eliminated from the hearing, and setting a date for the commencement of formal hearing on these specifically defined issues which can not be so eliminated, and for such other purposes as the Presiding Examiner may find desirable.

The Commission orders:

(A) Docket No. RP61–19 and Docket No. RP62–7 are consolidated for purposes of hearing and decision.

(B) The Commission staff, on or before February 26, 1963, shall file and serve upon all parties copies of the prepared testimony and exhibits comprising its entire direct case-in-chief in these proceedings.

(C) Midwestern, on or before March 28, 1963, shall file and serve the prepared testimony and exhibits which it proposes to adduce on the record.

(D) Presiding Examiner Joseph Zwerdling, or any other officer or officers of the Commission designated by the Chief Examiner for that purpose (see delegation of authority, 27 F.R. 4276, etc.) shall preside at the pre-hearing conferences and at the hearing in this matter, pursuant to the Commission's Rules of Practice and Procedure.

(E) Without limitation upon the authority of the Presiding Examiner to convene pre-hearing conferences prior to, or subsequent to the date herein fixed, pursuant to the provisions of Section 1.18 of the Commission's Rules of Practice and Procedure, a pre-hearing conference before the Presiding Examiner herein designated shall commence at 10:00 a.m. (EST) on April 8, 1963, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., for the purpose of effectuating the intent of the Commission as hereinabove set out in the body of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP63–153

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 18, 1963)

On December 3, 1962, The Ohio Fuel Gas Company (Applicant) filed in Docket No. CP63–153 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and replacement of facilities during the calendar year of 1963, and the operation of such facilities, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch to maintain service to its existing customers.

The total cost of the proposed facilities will not exceed a maximum of $2,500,000.00 and no single project will exceed a cost of $500,000. The proposed facilities will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 7, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or

petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) The Ohio Fuel Gas Company, is engaged in the transportation and sale of natural gas for resale for ultimate distribution to the public as stated in its application and is therefore a natural gas company within the purview of the Natural Gas Act.

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction, replacement and operation of facilities as proposed, are to enable Applicant to improve service to its existing customers and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 thereof.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit on or before March 1, 1964, a statement showing by projects: (a) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (b) location of said projects, (c) facilities replaced, if any, (d) abandonment of service, if any, (e) capacity increase, if any, and (f) the actual final cost of facilities constructed under the authorization herein granted.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period of the calendar year of 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,500,000.00 with no single project to exceed a cost of $500,000.00.

(8) The certificate issued hereinafter should be conditioned upon Applicant obtaining permission and approval, as required, from the Ohio Public Utilities Commission or the Federal Power Commission for any abandonment of service that may result from the replacement of facilities authorized by said certificate.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission is granted pursuant to Section 1.30(c) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing The Ohio Fuel Gas Company to construct, replace and operate facilities during the calendar year 1963, as more fully described in the application in this proceeding.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general

terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit on or before March 1, 1964, a statement showing by projects: (a) a description of the facilities or projects that have been constructed pursuant to the authorization herein granted, (b) the location of said project or projects, (c) facilities replaced if any, (d) abandonment of service, if any, (e) capacity increase, if any, and (f) the actual final cost of facilities constructed under the authorization herein granted.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year of 1963 and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $2,500,000.00 with no single project to exceed a cost of $500,000.00.

(E) Applicant shall obtain permission and approval, as required, from the Federal Power Commission or the Ohio Public Utilities Commission for any abandonment of service which may result from the replacement of facilities authorized herein.

OPINION NO. 379

SOUTHERN NATURAL GAS COMPANY, DOCKET NOS. G-20509 AND RP60-15

OPINION AND ORDER DETERMINING RATES

(Issued February 18, 1963)*

Syllabus

1. Proper test year here was correctly settled by earlier orders—namely the twelve months ending June 30, 1959, as adjusted. P. 328.
2. Commission *adopts* Southern's test year sales adjustments. P. 329.
3. Three-year average urged by Southern [1958, 1959 and 1960] is more nearly representative of anticipated costs, and is fair measure of amount of exploration and development expense to be included in adjusted cost of service. P. 330.
4. Where there is wide year to year variation in maintenance costs of producing wells, it is proper that cost of service allowance thereof be computed as an average of number of years of recent experience. P. 331.
5. Search for storage is properly related to Southern's pipeline operations whether carried out by Southern or its subsidiary; related expenses incurred by Southern in test year cannot be considered here to be nonrecurring by reason of subsequent transfer of storage activities to subsidiary. PP. 331-332.
6. In fixing Southern's rates Commission computes Federal Income Tax allowance using straight line depreciation deduction subject to condition that such rates shall be adjusted to reflect, on prospective basis, any change in policy resulting from *Alabama-Tennessee*. P. 334.
7. It has not been demonstrated, either generally or here, that pipeline exploration and drilling integrated with marketing activities involve same degree of risk as that encountered by independent producer. P. 336.
8. Southern has failed to demonstrate existence of any benefits to its jurisdictional customers resulting from its production operations. P. 337.
9. To warrant additional return on production properties pipeline should: (1) demonstrate production activity is for sole purpose of supplying gas to

*Rehearing denied; stay granted by order issued March 7, 1963, 29 FPC 433. Petition for Review dismissed on November 22, 1963, in *Southern Natural Gas Company* v. *F.P.C.* (CA3 No. 14399).

pipeline customers, and (2) show that production operation is or will be of practical economic advantage to pipeline customers. P. 337.

10. Southern has failed to justify a return on its wellmouth properties higher than that fixed for its pipeline properties. P. 338.
11. Southern allowed 1.5 percent on accumulated deferred taxes subject to future adjustment of return and rates [see 6, *supra*].
12. Southern leases held for future development are properly included in its rate base as plant held for future. P. 339.
13. Overall rate of return of 6.24 percent *allowed*, reflecting weighted average of 6.5 percent on debt and equity capital and 1.5 percent on deferred taxes. P. 340.
14. Commission follows *Atlantic Seaboard* method of cost classification, finding no factual basis here to justify departure therefrom. P. 342.
15. Finding facts here justify departure from general practice, Commission *concludes* use of contract requirements rather than actual peak period deliveries is to be preferred as measure of peak responsibility. PP. 343–344.
16. There is no substantial basis in this record for departure from Mcf-mile method in allocation of transmission costs. P. 345.
17. Demand and commodity miles computed in accordance with actual flow to all delivery points provides proper basis for allocation of transmission costs here. P. 346.
18. Citing *Tennessee Gas, Opinion No. 352*, Commission *allocates* transmission costs in Southern's zones 50 percent on basis of Mcf-miles and 50 percent on historical revenues. P. 348.
19. Commission *rejects* "Annual Capacity" method of cost classification and allocation. P. 350.
20. Commission *adopts* two-block commodity charge rate design [Staff's Basis No. 4] as preserving principles of *Atlantic Seaboard* while enabling Southern's distributors to retain industrial business. P. 353.
21. Commission *disallows* proposed rates tendered under Section 4(d) of the Natural Gas Act and *determines* just and reasonable rates. P. 356.

Commissioner Ross *filed* supplemental statement.

Commissioner Morgan *concurring* in result.

Commissioner O'Connor *concurring*.

Commissioner Woodward *concurring* in part, *dissenting* in part.

William S. Tarver, H. D. McHenry and *Peter G. Smith* for Southern Natural Gas Company.

Lawrence Dumas, Jr., and *Albert J. Feigen* for South Georgia Natural Gas Company.

Crawford L. Pilcher, Ben T. Wiggins and *Alvin J. Rowe, Jr.*, for Georgia Public Service Commission.

E. K. Hanby, Jr., for City of Gadsden, Alabama.

Dale A. Wright, Harold L. Talisman and *Harry S. Littman* for Alabama Gas Corporation.

Herman W. Boozer, William H. Schroder and *Tench C. Coxe* for Georgia Power Company.

Maurice F. Bishop, O. C. Owen, Ralph Smith and *Chris Whatley* for Alabama Public Service Commission.

Arthur M. Williams, Jr., J. David Mann, Jr., and *William W. Ross* for South Carolina Natural Gas Corporation.

S. E. Kelly, Jr., for Gas Light Company of Columbus, Georgia.

Horace E. Richter, Frank Tinger and *John Arnold* for Gas Section, Georgia Municipal Association.

Allison Wade, E. Smythe Gambrell, Harold L. Russell and *Theodore M. Forbes, Jr.*, for Georgia Textile Manufacturers Association, Inc., and Georgia Industrial Gas Users Association.

Clarence J. Koontz, Leonard M. Shinn, Donegan Mann and *David T. Bryant* for Administrator of General Services.

H. H. Hillyer, Jr., and *Andres McCollam, Jr.*, for South Atlantic Gas Company.

Harry A. Poth, Jr., Richard M. Merriman and *Peyton G. Bowman* for Mississippi Valley Gas Company.

Joe Starnes for Marshall County Gas District.

L. G. Hills for Alabama Municipal Gas Association.

E. W. Moise, D. A. Crawford and *Norman A. Flaningam* for Atlanta Gas Light Company.

Hon. John J. Snows and *Arthur M. Williams, Jr.*, for South Carolina Public Service Commission.

Mayer U. Newfield for City of Birmingham.

Mayer U. Newfield, S. H. Sprott and *J. Wagner Finnell* for City of Tuscaloosa, Alabama.

R. L. Anderson, Jr., James A. May, Kurt F. Pantzer, Walker W. Lewis, Jr., and *Reuben Goldberg* for Georgia Kraft Company.

Frank D. Foley for Gas Light Company of Columbus.

Edwin M. Miller and Francis J. Gilmore for Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

Ross, *Commissioner*:

I. Procedural Background

These proceedings involved increased rates filed by Southern Natural Gas Company (Southern) under Section 4(d) of the Natural Gas Act (Act). These filings, made on November 25, 1959, in Docket No. G–20509, and on June 2, 1960, in Docket No. RP60–15, proposed increased rates designed to recover the cost of serving Southern's jurisdictional customers, including a 7 percent over-all return on a net investment rate base. The RP60–15 filing was based on the same test period and test period data as the filing in G–20509, but was adjusted to give effect to an increase in the cost of gas purchased by Southern from United Gas Pipe Line Company (United) resulting from a rate increase filed by United in Docket No. RP60–2 which became effective August 13, 1960. Based upon sales for the test year ending June 30, 1959, as adjusted, the annual increase proposed in G–20509 was $7,756,563; and the additional increase proposed in RP60–15 was $1,312,000.

By order issued December 24, 1959, the Commission suspended the increased rates in G–20509 until June 1, 1960. Hearings commenced before the presiding examiner on January 26, 1960, and continued until May 10, 1960, when staff moved for an interim order on rate of return and omission of the intermediate decision procedure with respect thereto.[1] The examiner referred these motions to the Commission for decision, and granted a continuance of the hearing until September 14, 1960. By order issued May 27, 1960, the Commission omitted the intermediate decision procedure and fixed June 24, 1960, for oral argument. Thereafter, on July 8, 1960, 24 FPC 26, the Commission issued an interim order

[1] At the time of staff's motions, Southern had presented all of its direct case, except certain evidence relating to rate of return on production properties; staff had presented its direct case on rate of return; and cross-examination of both Southern's and staff's witnesses on rate of return had been completed.

fixing the rate of return on Southern's pipeline properties at 6.5 percent, and reserving all other issues presented for disposition in the second phase of the proceedings, including the effect on the rate of return of accumulated deferred income taxes, the rate of return to be allowed on Southern's production properties, and the proper treatment of tax benefits with respect to percentage depletion and intangible well drilling expenses. Giving effect to the 6.5 percent rate of return found to be "fair, just and reasonable" for Southern's pipeline properties, and to the 7 percent rate of return claimed by Southern for its production properties, the Commission computed an over-all composite rate of return of 6.52 percent to be allowed to Southern for the purpose of filing substitute reduced rates to be effective June 1, 1960. Southern filed substitute rates in accordance with the interim order on July 18, 1960.

Meanwhile, on June 2, 1960, Southern had filed the increased rates in RP60–15 which were designed to pass along the applicable portion of the increased rates filed by United in RP60–2. On July 29, 1960, the Commission issued an order accepting and allowing to become effective as of June 1, 1960, subject to investigation, hearings and further order, the substitute rates filed by Southern in G–20509. The same order disallowed the rates filed by Southern in RP60–15, directed that Southern file substitute rates in that docket to reflect the Commission's July 8, 1960, rate of return determination in G–20509, and consolidated the two proceedings for purposes of hearing. Such substitute rates in RP60–15 were filed by Southern on August 5, 1960, and by order issued August 24, 1960, were allowed by the Commission to become effective as of August 13, 1960, subject to investigation, hearings and further order. In accordance with the Commission's orders of July 8, 1960, and July 29, 1960, Southern is under obligation to refund at 7 percent interest per annum from the date of payment any portion of the increased rates and charges permitted to become effective in these dockets which, upon final order herein, the Commission finds to be unjustified.

After a number of further continuances granted by the examiner, the hearings in the second phase of these proceedings resumed on February 7, 1961, and continued intermittently until concluded on July 20, 1961. Briefs and reply briefs were then filed by the parties, and thereafter, upon motion by Southern, the Commission by order issued January 19, 1962, waived the intermediate decision procedure with respect to this second phase of the proceedings and directed that oral argument be held before the Commission.[2] The Commission heard oral argument on February 8, 1962, and the issues presented are now before the Commission for decision.[3]

II. The Issues

The ultimate determination to be made by the Commission in these proceedings is of the just and reasonable rates for Southern to be allowed in G–20509 for the period commencing June 1, 1960, and in RP60–15 for the period commencing August 13, 1960. Inasmuch as the Commission has permitted Southern to use the G–20509 test year and test year data, with the exception of the increased cost of gas purchased from United and the increased operating costs based thereon, in support of its filing in RP60–15,[4] and inasmuch as the same

[2] This procedure was necessitated by the death of the presiding examiner shortly following the conclusion of the hearings.

[3] Interveners appearing and/or participating in these proceedings are listed in the appearances attached to this opinion. These interveners include Southern's distributing company and industrial customers, and federal, state and local agencies or bodies purchasing or representing purchasers of gas in Southern's service area. Southern's pipeline system extends from Louisiana to South Carolina, serving customers in Mississippi, Alabama, Georgia, and South Carolina.

[4] Letter of April 7, 1960.

allocation and rate design methods were used by Southern in both dockets, the issues presented in each of the two dockets are the same and the only difference between the rates herein to be determined for G–20509 and RP60–15 will be a proportionate increase in the latter based on the increased cost of gas purchased by Southern from United after August 13, 1960. Except as otherwise noted, the costs hereafter referred to in this opinion and order are the costs applicable to RP60–15, including the United increase.

The issues in this case fall generally into three categories. The first group includes issues relating to Southern's cost of service. In this group are questions as to the test year to be used, adjustments to be made in test year sales and costs, rate base and return. The second group includes issues relating to the classification and allocation of costs, among which are questions as to the treatment of production costs, the use of the Mcf-mile method of allocation or some variation thereof, the importance of historical zone rate differentials, and peak day responsibility. The third group includes issues relating to the design of Southern's rates and the determination of the proper relative levels of demand and commodity charges to be fixed in each of Southern's rate zones.[5]

III. Cost of Service

A. Test Year

Southern's rate filings and its cost of service evidence in support thereof are based upon a test period consisting of the twelve months ending June 30, 1959, as adjusted. This test year constituted the "most recently available actual experience" of Southern at the time of its filing as required by the then designated Section 154.63(b)(3)(i)(e) of the Commission's Regulations under the Natural Gas Act. However, certain major adjustments in the test year period were required because of the expansion of Southern's system during the test year. As explained by Southern's witness:

> Q. Will you explain the important changes which required adjustments in the 12 months of actual experience?
>
> A. The design daily delivery capacity of Southern's system was increased in December, 1958 from 990,000 Mcf to 1,185,000 Mcf. This capacity was further increased to 1,365,000 Mcf in December, 1959. Accordingly, the test period reflects the operation of a system with a design daily delivery capacity of 1,365,000 Mcf.
>
> Since the system with this increased capacity has been in service only about a month, no total experienced costs or sales are available. It was necessary, therefore, to use contract demands and maximum delivery obligations which became effective November 1, 1959, and estimated annual sales related thereto, and estimated non-jurisdictional sales for the 12 months period immediately following the capacity increase, certain estimated operating expenses and an estimate of the cost of the new facilities which were constructed in connection with the capacity increase.
>
> In short, the test period consists of 12 months of operation of the system with its present capacity of 1,365,000 Mcf.

Although actual operating data and experienced costs for the year 1960 were not available to Southern at the time it presented its direct case, such data were available to staff at the time staff presented its case. Staff gave

[5] Zone 1 includes Mississippi; Zone 2 includes Alabama, plus Columbus and West Point in Georgia; Zone 3 includes the rest of Georgia, plus the Aiken-North Augusta area of South Carolina. This zone structure became effective on November 1, 1959, as part of the tariff changes filed by Southern in Docket No. G–18512. Prior to that time, Chatham County Georgia, and the South Carolina portion of Zone 3, were included in a separate Zone 3A.

consideration to the use of a later test year on the basis of this information, but decided to utilize the same test period used by Southern, as well as the adjustments for costs and sales made by Southern to reflect its system expansion, concluding that the test year as projected for the year 1960 was a sufficiently reliable guide to Southern's expanded operations to be utilized in determining its rates for the future in these proceedings.

Opposed to use of the test year adopted by Southern and staff, the Georgia Public Service Commission (Georgia PSC), with the support of other Zone 3 interveners, requested the examiner to direct Southern to make available at its offices certain books, records and other data so that the Georgia PSC could prepare a cost study based upon a test period of 12 months ending April 30, 1961, to be introduced in evidence in the proceedings. On June 12, 1961, the examiner denied the request of the Georgia PSC, finding that he had no authority for issuing such a directive, and that even if he had, the action requested was not justified by the facts of the case. The examiner further noted that the Commission had heretofore fixed the date of June 26, 1961, for the serving of interveners' prepared testimony and exhibits. On June 23, 1961, the Commission affirmed the examiner's ruling and further refused to issue a subpoena *duces tecum* for the same purpose, stating, among other things, that the delay of these proceedings which would follow the introduction of a later test year was not justified, 25 FPC 1207. Nevertheless, the Georgia PSC thereafter offered in evidence at the hearings an exhibit and related testimony presenting a cost of service and revenue study for the year ending April 30, 1961, based on Southern's Form 11 reports and other material already in the Commission's files. This the examiner on July 14, 1961, rejected, although he did permit it to be used as an offer of proof. Upon appeal by the Georgia PSC the Commission, by its order issued July 31, 1961, affirmed the examiner's ruling, stating that upon a consideration of all the facts and circumstances, "including the excluded exhibit and related testimony received as an offer of proof and the additional data incorporated in the record by reference," it was still of the opinion that the introduction of a later test period was unjustified.

Although the Commission has thus rejected the Georgia PSC's efforts to put in evidence a cost of service and revenue study based on a test year ending April 30, 1961, the Georgia PSC in its main brief continues to urge upon the Commission the adoption of the later test year; and in its brief, the Georgia PSC sets forth a cost of service and revenue study based on the later test year which is essentially the same as that previously offered in evidence and excluded by the Commission. We recognize the desire of the Georgia PSC to preserve its position by arguing to the later test year in its brief; but this presentation cannot be accepted as a basis for reconsideration of our earlier orders denying its use, and certainly cannot be accepted as proof of Southern's costs and revenues. In our opinion, based on consideration of the full record, the matter of the proper test year to be utilized in these proceedings to fix Southern's rates was correctly settled by the earlier orders referred to, and is the test year utilized by Southern and by staff—namely, the twelve months ending June 30, 1959, as adjusted. The only issues with respect to the test year properly before us now are the adjustments thereto.

B. TEST YEAR SALES ADJUSTMENTS

The Georgia PSC, and those of the Zone 3 interveners who have supported the Georgia PSC's proposal for use of a later test year, attack the adjusted sales figures included by Southern in its presentation and adopted by staff. These sales figures represent projections or estimates for the year 1960, which was the

first full year of operation by Southern following its system expansion, and, with the Commission's permission, are based on customer nominations as of November 1, 1959, which were originally provided for the purpose of securing a certificate for Southern's new facilities in *South Georgia Natural Gas Co., et al.*, 22 FPC 211, decided June 11, 1959. The interveners' objections to the use of these adjusted figures stem from the fact that there was a substantial drop in the level of interruptible industrial sales in 1960. By using a test year ending April 30, 1961, as urged by the Georgia PSC, recognition would be given to changes in Southern's sales to particular customers which would result in a more favorable allocation of costs to customers in Zone 3.

In adjusting test year sales figures, the basic question to be considered is what is the best measure of future sales as related to test year costs. Use of the later sales data, as proposed by the interveners identified above, would necessitate correlative cost adjustments. In effect, these interveners are rearguing for the utilization of a later test year, the use of which we have already rejected. The only evidence with respect to test year sales adjustments was submitted by Southern, and this evidence, after analysis and comparison with 1960 data, was supported by staff. In our opinion, Southern's adjustments are reasonable, and we hereby adopt them.

C. OPERATING EXPENSE ALLOWANCES

Southern presented an overall gas system cost of service totaling $127,309,148. Staff, on the other hand, presented a cost of service for Southern's system operations totaling $123,784,549. A summary of the items of cost at issue in these proceedings, as developed in Southern's and staff's studies, together with our determinations with respect thereto, are set forth in the table below:

	Southern	Staff	Commission
Operating expenses:			
Exploration and development	$2,073,903	$1,438,619	$1,583,659
Production and gathering	1,794,105	1,717,284	1,717,284
Storage	117,696	0	117,696
Administrative and general	3,620,379	3,589,663	3,589,663
State income taxes	470,433	252,867	252,107
Taxes other than income	3,871,205	3,720,941	3,720,941
Federal income tax	9,260,611	7,508,272	7,485,669
Return	15,292,803	14,748,890	14,728,025

The total system cost of service for Southern as herein determined, and as set forth in Appendix A, is $124,003,057.

Considering the items of cost at issue in the order presented in the tabulation above, we turn first to the four categories of operating expenses. No question with respect to Southern's treatment of these expenses in the test year has been raised other than by staff. The Georgia PSC objects to use of the expense figures presented by both staff and Southern, but this objection is based on its contention that the cost of service should reflect expenses in a later test period, and is not directed to the question of the proper allowance to be made for the test year used by staff and by Southern, and here adopted by the Commission.

1. *Exploration and Development*

Southern included in its cost of service the actual exploration and development expenses applicable to the twelve months ending June 30, 1959, adjusted only to annualize delay rental expenses at the level of payments being made as of June 30, 1959. Staff, on the other hand, included a figure based on an

average of the expenses incurred for the calendar years 1957 through 1960. Staff would justify using a four-year average rather than actual expenses for the test period on the ground that exploration and development expenses varied widely from year to year, and that an average of a number of years of recent experience would give a figure which is most representative for rate making purposes. Staff's total four-year average was $2,572,361, as compared to Southern's total test year figure of $3,708,291. Of these amounts, staff determined the amount attributable to system gas operations to be $1,438,619, as against Southern's comparable system cost figure of $2,073,903, a difference of $635,284.

There was no controversy concerning the method to be used in allocating total exploration and development expenses among system gas, off-system gas and oil operations, it being agreed that Southern's method, based on gross investment in producing wells, was most appropriate to Southern's particular situation. The only issue, therefore, is whether actual expenses for the test year, or a four-year average, or some other average, should be used for determining the allowance for exploration and development.

The theory of determining rates on the basis of test year experience assumes that costs and revenues for the test year, properly adjusted to reflect known changes which will occur within the near future, will be typical of a company's experience beginning with the date on which its rates become effective. Where, however, certain costs are found to vary widely from year to year, it cannot be assumed that the data for the test year alone are typical; and to avoid distortion of a company's cost of service, and to determine costs which are most truly representative of the future, such items of expense which are characterized by such fluctuations may appropriately be averaged over a number of years of recent experience. This the Commission has done with respect to widely varying exploration and development costs such as appear in this case. The number of years over which such costs should be averaged is in each case a matter of Commission judgment.

Staff found the actual expense for the years 1957 through 1960 to be as follows:

1957	$1,794,333
1958	3,593,030
1959	2,071,089
1960	2,830,993

Staff used the average of these four years as the basis of its allowance for exploration and development in an effort to achieve a balance between the two high cost years of 1958 and 1960, and the two low cost years of 1957 and 1959. Southern, however, contends that if an average is to be used, a three-year average using the figures for 1958, 1959 and 1960 would be more appropriate. Southern would eliminate the low 1957 figure as unrepresentative of its costs today, thus producing an average figure substantially higher than that derived by staff. In our judgment, the three-year average urged by Southern is more nearly representative of Southern's anticipated costs, and is a fair and appropriate measure of the amount of exploration and development expense to be included in Southern's adjusted cost of service.

The average of actual expenses for the years 1958, 1959 and 1960 is $2,831,704. Allocating this total expense figure to system gas, off-system gas, and oil operations on the basis used by both staff and Southern, we find that the amount to be included in Southern's system cost of service for exploration and development expense is $1,583,659.

2. *Production and Gathering Expense*

Included in Southern's cost of service allowance for production and gathering

expense is an item for Account 734.3, Maintenance of Producing Gas Well Equipment—Other* which is based on actual expenses for the twelve months ending June 30, 1959, plus an adjustment to reflect a full year's operation in the Montegut field which was connected to Southern's system in August 1959. The Montegut adjustment was made on the basis of operating expenses in a similar area during the test period. Here, as in the case of exploration and development expense, staff objects to the use of the test year cost because of the yearly variation in production maintenance costs. Staff, in its cost of service, computed an allowance using a four-year average well-year expense which it multiplied by the number of well-years in the 12 months ending June 30, 1960. The adjusted amount so derived by staff is $182,735 as compared to Southern's allowance of $299,528. After allocating a portion of these amounts to off-system operations, the difference between staff's and Southern's figures applicable to Southern's system operations is $93,644.

Wide variations from year to year are not uncharacteristic of maintenance costs associated with producing wells, and where such variations appear it is proper that the cost of service allowance for such costs be computed as an average of a number of years of recent experience. In our opinion, the method utilized by staff, whereby an average expense is determined on the basis of a common denominator of well-years and this average cost per well per year is multiplied by the number of well-years for the adjusted test year, provides a reasonable basis for estimating future expense and should be used in this case. Accordingly, we adopt staff's computation of the Account 734.3 allowance, which, as noted above, results in a downward adjustment of $93,644 in that item as allocated to Southern's system operations.

We also adopt the offsetting adjustment of $16,823 proposed by staff with respect to Account 735.4, Joint Expenses Credit, and which relates to the adjustment of the maintenance costs in Account 734.3. Southern does not oppose this offsetting adjustment. The net effect of the two adjustments is a reduction of $76,821 in Southern's production and gathering expense allowance.

3. *Storage Expense*

Southern included an adjusted figure of $117,696 in its cost of service for storage expenses during the test year. These are expenses which were incurred by Southern in attempting to locate a geological formation suitable for gas storage. Staff did not question that the adjusted figure represents the expenditure made for storage; but proposed elimination of the entire expense on the ground that it was non-recurring, inasmuch as Southern transferred its activities relative to finding suitable storage to a wholly-owned subsidiary known as Sonat, Inc. in June 1960.

The record establishes the fact that Sonat is continuing the search for storage on behalf of Southern, that the funds for Sonat's activities were provided by Southern, and that any benefit therefrom will accrue to Southern. Staff, however, questions whether the benefits of Sonat's storage explorations will accrue to Southern's jurisdictional customers; but we cannot see that the transfer of the storage activities to Sonat creates any greater uncertainty in this regard than would exist if Southern were conducting the storage explorations itself. In our opinion the search for storage is an activity properly related to Southern's pipeline operations, whether carried out by Southern itself or its wholly-owned subsidiary, and the expenses incurred by Southern with respect thereto in the

*[Editor's note] References to account numbers herein are those which were in effect prior to the revision of the Uniform System of Accounts made by Order No. 219, and effective January 1, 1961, 23 FPC 825.

test year cannot be considered in this case to be non-recurring simply by reason of the subsequent transfer to Sonat. In any event, the objections raised by staff because of the transfer now appear to be mooted, since Sonat was formally dissolved effective October 13, 1961, and under the plan of liquidation all of Sonat's properties, assets and liabilities were transferred to Southern, which is again carrying on its own storage explorations as before.[6] We find the $117,696 included by Southern in its cost of service to be a reasonable and proper allowance for storage expense.

4. Administrative and General Expense

Southern showed a total adjusted figure of $68,371 for regulatory expense in its cost of service. This was based on the actual test year expense of $16,849, adjusted upward by $51,522 to reflect on an annual basis the anticipated expense of the present proceedings. Staff's total figure for this expense was $36,718, the average of such expenses over the four-year period from 1957 through 1960. After allocation of these total figures between system and off-system operations, the differences between Southern's allowance and staff's is $30,716.

Regulatory expense is a widely fluctuating expense, the benefits of which normally are received over a number of years, and it is the Commission's practice to utilize an average of such expenses for rate-making. The allowance made by staff should be adequate to permit Southern to recover its expenses in this case if it does not become involved too soon in further rate proceedings before the Commission. And even if Southern should find it necessary to file for a further increase to pass along additional increases in the cost of its gas purchased from United, it will have an opportunity at that time to show that its regulatory expense is trending upward still more, and to obtain whatever increased expense allowance is reasonably required to permit it to recover its expenses. It should be noted, however, that in such a subsequent proceeding, there would be no need to re-try all of the issues presented in the present case, and Southern's regulatory expense should be substantially less than that incurred in this case. We can find no justification at this time for an allowance as high as that proposed by Southern. The allowance made by staff is adequate, and the reduction of $30,716 in Southern's cost of service by reason thereof is reasonable.

D. STATE INCOME TAXES

Southern computed state income taxes for the test period by applying a composite percentage rate to net income subject to federal income taxes. The composite rate used was 2.64 percent, and was derived by relating estimated state income taxes for the year 1958 to the net income subject to tax on the 1958 federal income tax return. At this rate Southern's allowance for state income taxes was $470,433. Staff calculated its allowance by the same general method, but used a percentage factor of 1.75 percent based on tax data for the year 1959, the latest data available at the time staff prepared its cost of service study. Staff's allowance, as so determined, was $252,867, or $217,566 less than Southern's allowance. In using a ratio of 1.75 percent, staff made a small allowance for the prerogatives of state taxing authorities, so that the resulting allowance is something more than a bare bones figure. In our opinion staff's

[6] Although the fact of the dissolution of Sonat and the transfer of its properties back to Southern was not established at the hearing, which concluded prior thereto, and is not a part of the evidence in this case, we take official notice of these subsequent developments as described in Southern's reply brief and by its attorney at the oral argument before the Commission.

allowance, based on tax data for the year 1959, is more representative of the test year, which is the year ending June 30, 1959, as projected into 1960, than is Southern's allowance, based on earlier tax data. Staff's allowance is reasonable and adequate, and we hereby adopt it.

E. TAXES OTHER THAN INCOME

The differences between staff and Southern with respect to taxes other than income, relate primarily to the treatment of state property and franchise taxes which are based on assessed valuations. Staff and Southern also differ as to the treatment of a pipeline franchise tax in Louisiana which Southern has protested and has not paid.

At the time Southern prepared its cost of service study, the latest data available were the actual taxes paid during the test year based on assessed valuations as of January 1, 1959. Since some of the property upon which the 1959 assessments were based had been completed late in 1958, Southern contends that it was allowed by state taxing authorities to use below-normal assessments on such property, it being the practice of these states to under-assess new pipeline facilities immediately after they are placed in operation, and to increase the assessments to normal levels only after the facilities have been in service long enough to contribute to the company's income. Accordingly, Southern normalized the 1959 under-assessments by adjusting actual taxes for the test period to reflect anticipated future assessments. Southern also adjusted the actual taxes for property additions not yet included in assessments.

In lieu of such taxes as computed by Southern, staff used actual 1960 taxes based on the assessed valuation of Southern's expanded system as of January 1, 1960. Southern apparently has no objection to staff's use of the later tax data which was available to staff when it prepared its cost of service study; however, Southern contends that the 1960 taxes were based on under-assessments of the value of its new system facilities installed late in 1959, and should be normalized in the same way that Southern normalized the 1959 taxes.

The record shows that the taxes actually paid by Southern for 1960 were approximately $100,000 less than the taxes estimated by Southern for the test year. That these taxes should be lower than anticipated by Southern throws some doubt on Southern's theory that the facilities added in 1958, as well as those facilities added in 1959, would be subject to increased assessments in subsequent years. There is no evidence of record to show how soon after installation or in what amounts assessments of new properties are increased by state taxing authorities, and it is mostly a matter of conjecture at this point as to what Southern's future taxes may be. Under the circumstances, rate payers should not be required to contribute more than the actual taxes paid; and any future increases in Southern's property and franchise taxes due to adjusted assessments should be reserved for consideration in later rate cases. For the purposes of the present case, we find staff's allowance for such taxes, based on actual 1960 data, to be appropriate.

With respect to the Louisiana pipeline franchise tax which Southern has protested and not paid, staff included an allowance which will permit Southern to recover more than one-half of the protested amount. Southern, on the other hand, included the full amount of the protested tax, even though only a small portion of the tax was paid. Southern does not, however, take issue with the treatment accorded this item by staff; and in our judgment the allowance made by staff is reasonable and adequate.

The net effect of the adjustments made by staff in Southern's cost of service for these taxes other than income is a reduction of $150,264 in system costs.

F. FEDERAL INCOME TAX

A determination of the proper allowance for federal income tax in Southern's cost of service is contingent upon disposition of three subsidiary issues: (1) The treatment to be accorded Southern for rate-making purposes with respect to the tax benefits associated with liberalized depreciation, statutory percentage depletion, and intangible well drilling expense deductions. (2) The rate of return to be allowed on Southern's production properties, and the treatment of accumulated deferred taxes, both of which will affect the over-all rate of return which Southern will be entitled to earn and the amount of return subject to tax. (3) The rate base to which the rate of return is to be applied. At this point, we shall consider the proper treatment of the tax benefits, this being an issue which bears directly on the method of computing Southern's taxes for rate-making purposes. The issues relating to rate of return and rate base will be discussed separately under those headings.

Both Southern and staff computed the income tax allowance on the basis of straight line depreciation, although Southern in fact has been taking advantage of liberalized depreciation (Internal Revenue Code, Section 167) in paying its taxes. By so normalizing its depreciation deduction in computing the tax allowance in its cost of service, Southern would recover through its rates a sum which is greater than its actual test year tax cost. Under present Commission accounting procedures this difference would be credited to an account for deferred taxes, to be available in future years if under the liberalized depreciation provisions the actual depreciation deduction should be less than the normalized deduction.

A precedent for this treatment of liberalized depreciation was established by the Commission in *El Paso Natural Gas Co.*, 22 FPC 260, 266–267; and until recently, the Commission has consistently followed the practice of normalizing depreciation on a straight line basis in computing cost of service tax allowances.[7] However, we have become increasingly aware of a need for further investigation of the proper use of liberalized depreciation for rate-making purposes. Accordingly, by order issued June 1, 1962, in *Alabama-Tennessee Natural Gas Co.*, Docket No. G–5471, *et al.*, 27 FPC 1063, we have set this question, together with that of the proper treatment of accumulated deferred taxes, for oral argument before the Commission, and have invited all those interested in this problem to participate. Any policy changes resulting from our decision in the *Alabama-Tennessee* case will, of course, have only prospective application; but it is our intention that such changes, if so determined, be given effect on as broad a scale as is possible. Therefore, we shall follow the existing precedent in fixing Southern's rates for the present time, and compute Southern's tax allowance using a straight line depreciation deduction; subject, however, to the condition that Southern's rates shall be adjusted to reflect on a prospective basis any change in policy with respect to the use of liberalized depreciation which may be established by the Commission in *Alabama-Tennessee*.

Turning now to the tax benefits for statutory depletion and intangible well drilling expenses, the issue to be decided is whether the savings in taxes accruing to Southern through the use of these special deductions should be retained by Southern or passed on to its ratepayers. In computing its tax allowance for its cost of service, Southern retains these benefits for itself by using book depletion instead of the statutory percentage depletion, and by taking no deduction for intangible drilling costs. Since its test year taxes were in fact reduced by the special deductions, the tax allowance included in the cost of service is higher

[7] The practice was approved upon review in *El Paso Natural Gas Co.* v. *F.P.C.*, 281 F. 2d 567 (CA5); see also *City of Lexington, et al.* v. *F.P.C.*, 295 F. 2d 109 (CA4).

than the actual taxes paid. Staff, in its cost of service, included statutory depletion and intangible well drilling costs as tax deductions, thereby reducing the tax allowance as computed by Southern by $558,289.

Subsequent to Southern's presentation of its case in the earlier phase of these proceedings, and prior to resumption of hearings in the second phase, the Fifth Circuit Court of Appeals issued its decision in the *El Paso* case,[8] holding that "there is no statutory authority for the Commission to treat actual savings in taxes to which natural gas companies are entitled any differently than savings in any other cost of service." The effect of the court's holding is to require that such savings be passed on to the consuming public.[9] In view of the court's decision, and in recognition of the fact that the Commission has consistently followed this decision in its treatment of the producer tax benefits in cases decided since *El Paso*, Southern does not belabor the issue in this second phase of the proceedings. However, as an alternative to retention of the tax benefits, Southern takes the position that it should be allowed an increment for incentive in rate of return on production properties. This argument is considered in our discussion of rate of return below.

G. RATE OF RETURN

Subject to certain stated reservations, the Commission's order of July 8, 1960, in the first phase of these proceedings, determined the rate of return to be used in fixing Southern's rates.[10] Thus, based on its findings as to Southern's capitalization ratios, cost of debt, and common equity allowance, the Commission determined the fair, just and reasonable rate of return on Southern's pipeline properties to be 6.5 percent. The Commission, however, reserved final judgment on the proper rate of return to be allowed on Southern's production properties,[11] and the related issue just considered, of the treatment of the tax benefits for statutory depletion and intangible well drilling expenses. Also reserved for disposition in this later phase of the proceedings was the question of how to treat Southern's accumulated deferred taxes, the answer to which could affect the rate of return allowed to Southern under the interim order. Apart from these reserved issues, which relate to and may affect Southern's rate of return, the Commission's findings and conclusions in the order of July 8, 1960, are final.

1. *Rate of Return on Production Properties*

Southern originally presented its proposed rates on the basis of an overall rate of return of 7 percent. During the course of the hearings, however, Southern took the alternative position that if it were to be denied the tax benefits for statutory depletion and well drilling expenses as part of the income tax allowance in its cost of service, it should receive a rate of return on its wellmouth production properties increased by at least the equivalent of these benefits. These benefits are equal to 5.33 percent of Southern's production rate base. Not only does Southern claim this additional 5.33 percent return, it further claims

---

[8] See note 7, *supra*.

[9] The Fourth Circuit Court of Appeals in the *City of Lexington* case cited in note 7, *supra*, followed the holding in the *El Paso* case, requiring the producer tax savings to be passed along to the ratepayers.

[10] The order of July 8, 1960, was issued in Docket No. G–20509. By order issued July 29, 1960, in Docket No. RP60–15, the same findings with respect to rate of return were made applicable to the latter proceeding, and the two dockets were consolidated for further hearings on Southern's rates.

[11] As determined herein Southern's wellmouth production rate base is $10,618,928, and its pipeline rate base (relating to the balance of its system properties) is $225,407,115.

that it is entitled to the same return as that enjoyed by successful independent producers, which it contends is 16 percent. Staff, and those interveners taking a position with respect thereto, contend that Southern is entitled to no more than the rate of return allowed on its pipeline properties.

In the interim order of July 8, 1960, the Commission stated that the evidence of record at that time did not support a finding that Southern was entitled to a greater rate of return on its production properties than on its pipeline properties.[12] Nothing that has been adduced by way of additional evidence or argument in this second phase of the proceedings convinces us that in the final order Southern should be allowed a rate of return on its production properties greater than that fixed for its pipeline properties.

In urging a higher rate of return on its production properties, Southern cites a need for the discovery of additional gas reserves to meet the increasing demands of the nation. It contends that pipeline companies cannot look solely to the oil industry for an adequate gas supply, since oil is in excess supply and the dropping-off of domestic oil exploration has resulted in a slowdown in the increase of gas reserves. To encourage pipeline companies to integrate their operations vertically through exploration and development of their own reserves, and to justify assumption by them of the greater and ever increasing risks associated therewith, Southern argues that there must be a substantial incentive in the form of a higher return on the investment in exploration and development.[13] Witnesses for Southern testified that this return should be comparable to that earned by successful independent producers, which is approximately 16 percent on invested capital. Southern claims that the benefits of vertical integration to be encouraged by such an allowance are made manifest not only in the acquisition of needed additional reserves, but in the increased flexibility of operations in meeting system demands, the reduced liability of having to pay for gas not taken under purchased gas contracts, and the improved bargaining position available in the purchase of new gas supplies.

It has not yet been demonstrated, either generally or with respect to the particular record before us in this case, that exploration and drilling activities conducted by a pipeline company and integrated with marketing activities of the pipeline involve the same degree of risk as exploration and drilling activities of an independent producer. While it may be true that the drilling of any particular well involves the same risk as to its turning out dry, it is the overall financial risk that we are here concerned with. It is well recognized that a series of dry holes or even a single dry hole may bankrupt an independent producer, and it is equally well recognized that an independent producer who has the misfortune to discover high-cost gas may very easily find it impossible to dispose of such gas at a price which returns more than a small fraction of his costs of discovery and development. Southern, as a regulated pipeline company, is allowed to recover all of its exploration and development costs in its cost of service, in addition to a return on its investment. Furthermore, Southern has a ready market for its production, and considerable supplies of low-cost gas into which it may blend any high-cost gas it may have discovered and developed. That these factors place Southern in a position considerably more favorable than that occupied by a typical independent producer seems both clear and obvious.

---

[12] Southern's rate of return of 7 percent on its production properties, as contained in its original filing, was utilized in the interim order only for the purpose of computing refunds and substitute lower rates during the interim period.

[13] In support of this argument Southern cites the *El Paso* and *City of Lexington* cases, note 7 *supra*, where it was held that the Commission must fix a rate which represents "a reasonable return on the investment, including compensation for consumption of the gas and an increment for incentive." (281 F. 2d 573–4; 295 F. 2d 118.)

In addition to the question of comparative risk, Southern contends that there are consumer benefits inherent in its production activities. Southern claims, for example, that the flexibility of having its own production results in a lower cost of gas to consumers. In this connection, Southern argues that an additional element of return is required as an incentive for Southern to expand such activities. The quick answer to this contention is that Southern has failed to demonstrate the existence of any benefits to its jurisdictional customers resulting from its production operations.

In dealing with this same issue in our recent decision in *El Paso Natural Gas Co.*, Opinion No. 366, issued October 19, 1962, in Docket No. G–4769, *et al.*, 28 FPC 688, we found that El Paso had not proved that an added element of return was needed as an incentive to continue its production activities. In a statement that is equally applicable here, we said:

> If El Paso's production activities result in lower overall costs and thus lower rates to its consumers, it has every reason to continue such operations in the normal course of the prudent, business-like operation of its system (p. 697).

Furthermore as in El Paso, there has been no clear demonstration here of such benefits to the company's jurisdictional customers. Certainly, in the absence of such a demonstration, there is no basis for an additional charge to Southern's customers through an added allowance for return on its production activities. The criteria applied by us in the *El Paso* case in rejecting the company's proposal for such an additional allowance for incentive govern the disposition of this issue here; and the findings there made with respect to El Paso may be made on the present record with respect to Southern:

> For example, no evidence has been presented which shows the effect of all of El Paso's production activities is to reduce its overall gas costs for its present pipeline customers to the lowest possible level, or in fact any showing as to whether the gas attached to its system gives its pipeline consumers an equitable portion of El Paso's lowest cost production. El Paso has made no showing of how much of the additional reserves it acquires will be dedicated to its pipeline customers. There is no evidence to show what part of its reserves El Paso may hold off the market for speculative purposes, may transfer to others, or may use for off-system sales, with perhaps a less than proportionate benefit to its pipeline consumers who supplied the funds with which the necessary preliminary exploration activities were conducted (p. 697).

In general it would warrant allowance of an additional return on production property if a pipeline made two showings. First it must demonstrate that the production activity is being carried on for the sole purpose of supplying gas to its pipeline customers. This requirement cannot be fulfilled by mere statements of intention, but must rest upon the history of the pipeline production operations and the commitments the pipeline has made by practical dedication of its production properties to pipeline service. It should not need argument to support the conclusion that if a pipeline is engaging in production operations for the benefit of groups other than its customers, the customers should not be paying a premium return on the production property.

A second essential showing is that the production operation has been so conducted that it is or will be of practical economic advantage to the pipeline's customers. A pipeline whose production properties make no demonstrable contribution to reduction of costs or improvement of service is likewise in no position to demand a premium return on its production investment.

In *El Paso* we discussed the question whether production operations of a large pipeline system involve additional risk for which it should be compensated.

This is indeed a factor, but we emphasize that there can be no reward supplied by a pipeline's customers for risk which is not incurred in a successful effort to improve the economics of pipeline gas supply. The risk factor, we conclude, is not determinative, but rather the key question is whether the consumers can equitably be asked to provide an additional element of return on account of production investment. Before this Commission could recognize an equitable obligation to allow such additional compensation, we would require a record showing that the production operations were, in practical effect, a benefit to consumers.

On the record presented in these proceedings, Southern has failed to justify a return on its wellmouth properties any higher than that fixed for its pipeline properties.

2. Accumulated Deferred Taxes

In the interim order of July 8, 1960, the Commission in computing Southern's rate of return did not include in the company's capital structure the accumulated deferred taxes of $14,975,000 shown on its consolidated balance sheet. As noted above, however, the Commission reserved judgment on the disposition of this item until this second phase of the proceedings. Southern contends that the treatment of this item in computing the interim rate of return was correct and should be adhered to. Staff, on the other hand, contends that in accordance with the Commission's decision in *Northern Natural Gas Co.*, 25 FPC 431 (1961), the accumulated deferred taxes should be included in Southern's capitalization at an allowance of 1.5 percent. The interveners take the position that the deferred taxes should either be deducted from Southern's rate base or treated in its capitalization as interest-free debt.

As we indicated earlier in this opinion in our discussion of the tax benefits associated with the use of liberalized depreciation,[14] we have decided to reexamine for the future both the question of the tax treatment of liberalized depreciation and the allowance on deferred taxes in computing rate of return. As noted, these questions have been set for oral argument and disposition in *Alabama-Tennessee Natural Gas Co.*, Docket No. G-5471, *et al.* By our order issued June 1, 1962, in the *Alabama-Tennessee* proceedings, we decided to use the 1.5 percent allowance on deferred taxes used in the *Northern Natural* case pending any change in policy on this issue.[15] We shall adopt the same procedure here. Accordingly, we shall compute Southern's rate of return on the basis of an allowance of 1.5 percent on accumulated deferred taxes; subject, however, to the condition that Southern's rate of return and the rates herein determined shall be adjusted to reflect on a prospective basis any change in policy with respect to the treatment of accumulated deferred taxes which may be established by the Commission in *Alabama-Tennessee.*

H. RATE BASE

Except for the working capital component, Southern and staff utilized the same rate base in their cost of service studies for the purpose of computing Southern's allowable return. The difference in working capital, amounting to $1,513,820, results from staff's adjustment of the federal income tax and various operating expense items in Southern's cost of service, as discussed above. In finally computing Southern's cost of service, we shall conform the working

[14] See pages 334–335, *supra.*

[15] We recognize our right to grant a 1.5 percent rate of return on deferred taxes has been questioned, and we are seeking further review thereof. In the meantime we are adhering to our prior disposition. *Panhandle Eastern Pipe Line Co.* v. *F.P.C.* (CADC, September 27, 1962), [rehearing *en banc* granted November 23, 1962; the court decision of September 27 was withdrawn on March 15, 1963 and a new decision entered affirming the FPC ruling; 316 F. 2d 659].

capital component of the company's rate base to the tax and operating expense allowances herein approved.

We have already referred to the contention of certain of the interveners that accumulated deferred taxes should be deducted from the rate base. Apart from this contention, discussed and decided above, the interveners have proposed two changes in the rate base shown by Southern and staff. The first of these would exclude the cost of undeveloped acreage held for future exploration and development. The second would reverse a transfer of some $6,600,000 from Southern's depreciation reserve made pursuant to an order of the Commission issued March 30, 1946, in Docket No. G–479, 5 FPC 427.

Georgia Textile Manufacturers Association, Inc. and Georgia Industrial Gas Users Association (jointly referred to as Georgia Industries) contend that certain non-producing, unproved acreage, held by Southern for future exploration and development should be eliminated from the rate base. Georgia Industries' contention is based on the fact that it is not presently known whether the acreage so held will produce gas or oil, or whether the gas produced will be in sufficient quantities to make its connection to Southern's system economically feasible. These arguments are not new to the Commission, and as a matter of policy the Commission has included such plant held for future use in rate base from the outset of its regulation of pipeline rates.[16] The purchase of undeveloped leases is a necessary part of Southern's exploration and development program related to its current efforts to maintain supplies of gas, and the leases so held for future development are properly included in Southern's rate base as plant held for future use.

There is no substance to Georgia Industries' charge that all of the investment in untested acreage was allocated to Southern's gas plant, without any effort to allocate a part thereof to its oil operations. The record shows that Southern allocated its adjusted production plant held for future use as follows:

		Percent
System gas	$1,831,512	55.9261
Off-system gas	261,453	7.9836
Oil operations	1,181,913	36.0903
Total	3,274,878	100.00

This allocation is based on Southern's investment in existing developed reserves. Southern's figures and allocation method were utilized by staff. There is no evidence to dispute their reasonableness, and we adopt them here for the purpose of computing Southern's rate base.

Atlanta Gas Light Company (Atlanta Gas) and Georgia Industries contend that Southern's rate base is overstated by reason of a transfer of $6,668,133.70 from its depreciation reserve pursuant to an order of the Commission which they claim was in error. The Commission's order, issued March 30, 1946, in Docket No. G–479,[17] a rate investigation under Section 5(a) of the Act, provided for a reduction in Southern's plant accounts on the basis of an original cost determination, and for the elimination of excessive wartime depreciation accruals from Southern's reserve for depreciation by transferring the excess in part to surplus and in part to a special reserve sufficient to absorb the excess in the plant accounts over original cost.[18] In support of its contention

[16] See *City of Cleveland* v. *Hope Natural Gas Co.*, 3 FPC 150, 174 (1942), and more recently, Opinion No. 326 in *El Paso Natural Gas Co.*, 22 FPC 260, 269 (1959).

[17] 5 FPC 427.

[18] Of the amount authorized to be transferred, Southern placed $721,741.53 in the special reserve to absorb original cost adjustments and $5,946,392.17 was transferred to surplus.

that this action of the Commission was in error, the interveners cite the dissent of one Commissioner in that case.

The transfer of reserves in Docket No. G–479 was made for the purpose of correcting a material error in accounting, which resulted in the excessive accrual of depreciation on wartime facilities. Although one Commissioner dissented to the action of the Commission in that case, there has been no showing in the present case to convince us that the action of the majority in authorizing the transfer of reserves to correct this error was unjustified.

There is no evidence of record to support the interveners' contention that by reason of the transfer of reserves authorized in Docket No. G–479 Southern's customers are being double-charged for the excess depreciation accruals. Prior to Docket No. G–479 Southern's rates were determined by private negotiations and not by cost of service; and although the Commission in Docket No. G–479 found Southern's revenues for 1945 to be $1,200,000 too high, there is no way of relating this excess in revenues to Southern's accounting practices with respect to the depreciation of wartime facilities. Clearly Southern has not been allowed to recover the excess depreciation accruals as part of any cost of service determination made by the Commission.

We can find no basis in the record before us for overturning the Commission's determination in Docket No. G–479, the very purpose of which was to permit the use of Southern's book figures in computing its rate base.

Southern's adjusted system rate base as herein determined is $236,026,043. The return to be allowed Southern on this rate base is $14,728,025.[19]

I. COST OF SERVICE SUMMARY

On the basis of the foregoing disposition of the issues relating thereto, we find Southern's overall system cost of service to be $124,003,057, as set forth in Appendix A attached hereto.

IV

Allocation of Costs

Having determined Southern's overall system cost of service, it is next necessary to decide what portion of Southern's cost of service is properly allocable to its jurisdictional sales, and what portion is allocable to its nonjurisdictional sales. We must also decide how the jurisdictional costs should be divided between Southern's various service zones. These allocations are required to determine the costs to be used as a basis for the design of just and reasonable rates applicable to jurisdictional sales in each of Southern's zones.

Since the allocation of costs relating to service on peak days is basically a function of demand or peak-day volumes, while the allocation of costs relating to off-peak service is basically a function of commodity volumes delivered annually, it is necessary as a preliminary to the allocation of costs to first classify the various items of cost as relating to demand or to commodity. Also, where as here the parties propose to weight the volumes of gas with a mileage factor for the purpose of allocating transmission costs as opposed to production costs, it is necessary to segregate such costs in making the allocations.

Thus the process of allocation in this case involves the following steps: The segregation of costs as production costs and transmission costs. The classification of the items of cost in each of these categories as demand or commodity. The allocation of demand costs to jurisdictional and nonjurisdictional sales on

[19] This return is computed on the basis of an overall rate of return of 6.24 percent, which reflects a weighted average allowance of 6.5 percent on debt and equity capital and an allowance of 1.5 percent on accumulated deferred taxes.

the basis of peak responsibility, using volumes alone to allocate production demand costs and volumes weighted by mileage to allocate transmission demand costs. The allocation of commodity costs to jurisdictional and nonjurisdictional sales on the basis of annual volumes, using volumes alone to allocate production commodity costs and volumes weighted by mileage to allocate transmission commodity costs. The allocation between zones of jurisdictional demand costs and jurisdictional commodity costs on the aforesaid basis of peak responsibility and annual volumes, using Mcf-miles for transmission costs, or on a historical revenue basis as urged by Southern, or on some combination basis such as proposed by staff.

The allocation issues here presented relate to the classification of production costs as demand or commodity costs, the determination of peak responsibility to be used in allocating demand costs, the computation of a mileage factor to be applied in the allocation of transmission costs, and the method of allocating jurisdictional costs to Southern's three zones. Also to be considered is the "Annual Capacity" method of classification and allocation proposed by one of the interveners.

A. *Classification of costs to demand and commodity*

In classifying costs as demand or commodity costs, Southern generally followed the principles of classification laid down by the Commission in *Atlantic Seaboard Corp.* (Opinion No. 225), 11 FPC 43, and *Northern Natural Gas Co.* (Opinion No. 228), 11 FPC 123, and commonly referred to as the *Atlantic Seaboard* method of classification. Broadly speaking the *Atlantic Seaboard* method requires the following classification: Transmission costs which are fixed or relate primarily to pipeline capacity are classified 50 percent as demand and 50 percent as commodity. Transmission costs which are not constant and vary in proportion to the volume of gas transmitted are classified 100 percent as commodity. Natural gas production costs, except that portion of purchased gas costs billed as demand, are classified wholly as commodity costs. Purchased gas costs billed as demand and manufactured gas costs are classified as demand costs.

Southern, however, departed from the *Atlantic Seaboard* method in its classification of natural gas production costs. Southern assigned all fixed natural gas production costs, other than those included in the cost of purchased gas, one-half to demand and one-half to commodity. And although Southern adhered to *Atlantic Seaboard* in classifying purchased gas costs, its witness testified on cross-examination that since presenting Southern's direct case the competitive position of gas sold for interruptible industrial use had so deteriorated that he was then of the opinion that it would be fairer to assign at least 25 percent of those costs to demand. Southern argues for such a classification of purchased gas costs in its brief, and as an appendix thereto presents its computation of the 25 percent classification together with schedules showing the classification and allocation of its system costs adjusted accordingly. Staff and Alabama Gas Corporation (Alabama Gas), which also introduced classification and allocation exhibits or testimony in this record, have utilized or accepted the *Atlantic Seaboard* method with respect to the classification of production costs. Georgia Industries, whose witness sponsored the "Annual Capacity" method of classification and allocation referred to above, would in effect classify all fixed costs as demand and all variable costs as commodity.[20]

[20] Georgia Industries' witness used classifications of "fixed" and "variable" rather than "demand" and "commodity". He used the total of fixed costs as the basis for allocating capacity charges, and the total of variable costs as the basis for allocating commodity charges. These allocations were made by the "Annual Capacity" method discussed at a later point in this opinion.

Our consideration of this and other cases in terms of current economic factors leads us to believe that a classification different from that determined in *Atlantic Seaboard* and *Northern Natural* might be appropriate. The classification used in *Atlantic Seaboard* was adopted because it was considered to be an acceptable method of distributing costs among the classes of customers of a certain pipeline, giving account to the operating characteristics of the pipeline involved. The decision in that case did not purport to establish a rigid mathematical classification methodology which would be applied, without exception, in all future pipeline rate cases. To the contrary, that decision set forth at some length the Commission's views regarding the method of cost classification selected " . . . so that all may be informed and guided in situations, which may be substantially similar to the conditions here present." (11 FPC 43, 53)

It is not surprising therefore, that the fairly universal use of the *Atlantic Seaboard* method of classification in pipeline rate cases has been the subject of increasing criticism. A recent article in the *Public Utilities Fortnightly*,[21] for example, compares the operating characteristics of Atlantic Seaboard Corporation at the time its rate case was decided, with the significantly different characteristics of many pipelines today. The article suggests that application of the *Atlantic Seaboard* formula today tends to make additional underground storage uneconomic and discourages economic use of a pipeline's facilities. While criticisms such as these may have merit, it should be noted that the Commission has not slavishly followed *Atlantic Seaboard* but has made adjustments in individual cases in the area of rate design in order to achieve a reasonable and just result. While this procedure may not satisfy the rate purists, it does serve to treat the pertinent economic factors involved. This should not be interpreted to mean, however, that we are completely satisfied with the *Atlantic Seaboard* method of classification, and are not open to make appropriate adjustment on a case by case basis.

It is apparent, however, that any deviation from the principles established in *Atlantic Seaboard* and *Northern Natural* could have a tremendous impact on the pipeline involved and upon all of its customers and ultimate consumers. Accordingly, we are convinced that any fundamental change in classification should be made only when all the parties to a proceeding have focused on this matter and have had full opportunity to contest any deviation suggested.

Turning now to this case, we are unable to find any factual basis which would justify a departure from the *Atlantic Seaboard* method of classification. As mentioned above, most of the classifications introduced herein conform to historic Commission policy.[22] Southern did propose a classification of production costs based on a determination of the fixed and variable costs involved. However, we consider it imprudent to deviate from the historic classification of production costs in the absence of a full record with respect to the classification of purchased gas costs.[23] We believe that there could be a fundamental relationship between the classifcation of production costs and the classification of purchased gas costs, which would preclude a determination of the classification of either on an independent basis. Moreover, Southern supports its recommended classification in part upon its contention that its production absorbs part of the swings in loads. The record, however, does not show that Southern takes the swings on its own production to an extent greater than under its purchased gas contracts.

---

[21] "How Practical Is The Seaboard Formula", *Public Utilities Fortnightly*, Vol. 71, No. 1, Jan. 3, 1963.

[22] We are not now convinced that the classification of fixed and variable suggested by Georgia Industries is appropriate. In our opinion, it is equitable to assign at least a portion of fixed costs to commodity for the reasons stated in *Atlantic Seaboard*.

[23] Only upon cross-examination did Southern suggest a classification of purchased gas costs at variance with *Atlantic Seaboard* principles.

Accordingly, we shall follow the *Atlantic Seaboard* method of cost classification in this proceeding.

B. *Peak responsibility to be used in allocating demand costs*

Southern has historically followed the practice in its rate increase filings with the Commission of allocating demand costs between jurisdictional and nonjurisdictional sales on the basis of its system design peak. This is the basis of Southern's allocation in the present case, in which it has used the contract requirements of its customers as the measure of peak responsibility for the winter of 1959–1960, rather than actual deliveries during an experienced peak. Such contract requirements for the test period reflected by the company's exhibits were 1,194,709 Mcf for jurisdictional sales, and 30,691 for firm nonjurisdictional sales. With the design daily capacity of its expanded system 1,365,000 Mcf, there was an excess unassigned capacity of 139,600 Mcf. For the purposes of its allocation, Southern assigned half of this excess to jurisdictional sales and half to nonjurisdictional sales. Thus Southern allocated its demand costs on the basis of a design daily capacity of 1,365,000 Mcf, of which 1,264,509 Mcf was assigned to jurisdictional sales and 100,491 to Mcf to nonjurisdictional sales.

Although the Commission has consistently adhered to a practice of allocating such costs on the basis of actual deliveries during an experienced peak—usually the three consecutive days of maximum system deliveries, staff in these proceedings made its allocation on the basis of adjusted peak day sales which are the same as those derived by Southern under the design peak method. Use of these design peak sales figures for the allocation of Southern's demand costs is supported by the Zone 3 interveners. Alabama Gas Corporation, on the other hand, presented an allocation based on actual deliveries by Southern during the three-day peak period of January 19, 20 and 21, 1960. Use of the three-day peak period sales is supported by other Zone 2 interveners.[24] Since Southern's jurisdictional customers during the three-day peak took a larger proportion of total deliveries than were assigned to jurisdictional sales by Southern and staff, and since Zone 3 customers on those days took a larger proportion of jurisdictional sales than reflected in Southern's and staff's allocation, the effect of using the three-day peak would be to assign less of the demand costs to Southern's direct nonjurisdictional sales as well as less to jurisdictional sales in Zones 1 and 2.

In our opinion, the facts of this case justify a departure from our general practice of using actual deliveries during an experienced peak period as the measure of peak responsibility for the allocation of demand costs; and they amply support the use, in this instance, of the adjusted peak day deliveries based on the contractual requirements of Southern's customers, as employed by Southern and staff.

As previously noted with approval, both Southern and staff, in determining annual volumes, used adjusted test year sales figures representing projections or estimates for the year 1960, which was the first full year of operation by Southern following its system expansion. It is reasonable and proper that the peak day sales volumes to be used in allocating demand costs should be coordinated with these estimated annual volumes which are the basis of the allocation of commodity costs. In our judgment, use of the design peak deliveries based on Southern's contractual requirements will, under the special circumstances of this case, best serve to bring the allocation of demand costs into reasonable

[24] At the time Southern prepared and served its direct case, it had not experienced a system peak with its expanded 1,365,000 Mcf capacity system, and no total of experienced sales for the winter of 1959–1960 was available.

relationship with the allocation of commodity costs, and to present a representative picture of the anticipated use of Southern's expanded system.

The record shows that during the three-day peak experienced in January 1960, Southern delivered an average total of 1,403,277 Mcf—an excess of 38,277 Mcf over design, and 177,877 Mcf over its firm system requirements. Of the total excess of 177,877 Mcf 139,003 Mcf represents excess over contract demands delivered to jurisdictional customers, and 38,874 Mcf represents excess over firm requirements delivered to nonjurisdictional customers. The record further shows that on January 7, 1960, prior to the peak period, the total of system sales was 1,424,990—an excess of 199,590 Mcf over system requirements, of which 84,273 Mcf represents deliveries to jurisdictional customers in excess of their contract demands, and 115,317 Mcf represents excess deliveries to nonjurisdictional customers. Again after the peak period, on January 24, 1960, the total of system sales exceeded total average deliveries during the peak period. The total on that date was 1,431,652 Mcf—an excess over system requirements of 206,252 Mcf, representing an excess over contract demands of 121,102 Mcf to jurisdictional customers, and an excess over firm requirements of 85,150 Mcf to nonjurisdictional customers. These figures reflect the unusual nature of Southern's operations, and further show the unreliability of the three-day peak period sales as a true measure of peak responsibility in this case.

As one of Southern's witnesses noted, Southern's sales are made in a relatively warm part of the country where sustained periods of cold weather are unusual. Consequently, Southern's operations are to a great extent dependent upon interruptible sales for industrial use, both direct and by its resale customers. Under its tariff, Southern's resale customers are permitted to run wide open, taking all the gas they might need so long as it is available. This explains the above-noted deliveries of excess gas on an interruptible basis to Southern's jurisdictional customers, both off and on peak. Because of the nature of its system, and the problems involved in the scheduling of excess gas for its direct and jurisdictional customers, Southern allocates a greater portion of this interruptible gas to its jurisdictional customers during periods of peak domestic and commercial demand, as indicated. And although its tariff provides that there shall not be discrimination between the various classes of service in the allocation of excess gas, deliveries of such gas can be balanced out, as a practical matter, only over a broad period, and not on a daily basis. Under these circumstances, the assignment of excess capacity in Southern's system half to jurisdictional and half to nonjurisdictional, as made by Southern and staff, is reasonable and proper; and we conclude that the use of contract requirements rather than actual peak period deliveries is to be preferred as a measure of peak responsibility in this case.

C. *Allocation of transmission costs to jurisdictional sales*

In allocating transmission costs between jurisdictional and nonjurisdictional sales, Southern utilized a mileage factor to weight the peak and annual volumes used as the basis of the allocation. This mileage factor was determined by a study of the flow of gas through Southern's system from points of supply to points of delivery and the computation therefrom of the weighted average mileage for peak and annual volumes transported by Southern to each point of delivery. This Mcf-mile method of allocation, with some variations, was used by all of the parties presenting allocation witnesses in these proceedings. The basic method is that established by the Commission in *Northern Natural Gas Co.*, Opinion No. 281, 14 FPC 11, and followed in *Kansas-Nebraska Natural Gas Co.*, Opinion No. 343, 25 FPC 448, and in *Tennessee Gas Transmission Co.*,

Opinion No. 352, issued February 6, 1962, 27 FPC 202. Although most of the Zone 3 interveners have in their briefs taken a position contrary to that presented by all four allocation witnesses, and argue for a system-wide, volumetric allocation of costs, there is no substantial basis in this record for a departure from the Mcf-mile method. Southern makes both jurisdictional and nonjurisdictional sales from all portions of its system, and there are no circumstances here presented which outweigh the importance of the distance factor in making a fair allocation of the costs of transmission.

Although all four allocation witnesses who testified in these proceedings utilized the Mcf-mile method in allocating transmission costs, there was a division of opinion as to how the demand and commodity miles should be computed. Southern took the position that its North and South lines, which are interconnected by three branch lines, should be treated as though they were a single looped transmission line, and that all of its gas supply should be treated as though it were completely commingled at Kosciusko, Mississippi, and Gwinville, Mississippi, the last points on the North and South lines, respectively, where gas is delivered into Southern's system. Southern took this position because from these two points its dispatchers have considerable flexibility in dispatching gas through its system to points of delivery on either the North or South lines, and because there is no fixed pattern for the flow of gas from its sources of supply to the various points of delivery on the two lines. To account for this mode of operation, Southern averaged the mileages at Kosciusko and Gwinville for gas from all sources tributary to those two points, and then took the mean of those two average mileages as a common base for the computation of mileages to all points of delivery on its system east of Kosciusko and Gwinville. Alabama Gas' allocation witness supported the use of the rolled-in mean of average miles west of Kosciusko and Gwinville as presented by Southern's witness.

Staff, on the other hand, computed demand miles and commodity miles on a flow-through basis, in accordance with the procedure usually followed by the Commission in applying the Mcf-mile method of allocation. Thus staff's witness treated the mileages at Kosciusko and Gwinville no differently that the mileages at any other points on Southern's system. Georgia Industries' witness used staff's computation of Mcf-miles in allocating costs by his "Annual Capacity" method.

The effect of rolling in all mileages west of Koskiusco and Gwinville on a weighted average basis, rather than treating such mileages the same as mileages on the rest of Southern's system, is to shift costs from nonjurisdictional sales to jurisdictional sales. Furthermore, to the extent that Mcf-miles are used in allocating jurisdictional costs to Southern's zones, the effect is to decrease such costs in Zones 1 and 2 and to increase the costs in Zone 3.

We recognize that Southern's dispatchers have a certain amount of choice in determining the flow of gas in Southern's system, and that the flow can be varied because of the interconnections between the North and South lines. We are not convinced, however, that the actual flow pattern established for the test year and for the peak period in January 1960, and utilized by staff in its computations, is so unreprestative of the flow of gas in Southern's system as to require a departure from our practice of determining Mcf-miles on the basis of actual flow-through.[25] Furthermore, 11 of Southern's 23 delivery points in Zone 1 are west of Kosciusko on its North line, and there is no substantial justification for not computing the Mcf-miles for deliveries to these points on

[25] Despite the discretion of its dispatchers, Southern found its flow pattern sufficiently representative to permit it to compute all mileages east of Kosciusko and Gwinville on a flow-through basis.

the same basis as the deliveries to points east of Kosciusko. We cannot accept Southern's characterization of the impact of ignoring these sales between Perryville, Louisiana and Kosciusko as "insignificant". It is our judgment that the demand miles and commodity miles as computed by staff in accordance with actual flow to all points of delivery provide a proper basis for the allocation of transmission costs in this case.

Another problem in computing demand and commodity miles arises from the fact that Southern purchases large quantities of gas from United Gas Pipe Line Company at Perryville, Louisiana, and Kosciusko, Mississippi. Southern gave no recognition to the distance traveled by this gas on United's system in making its Mcf-mile allocation of transmission costs since the entire cost of the United gas, including that part relating to transmission, was included in its cost of service as a cost of production. Alabama Gas' witness followed Southern in assigning zero miles to the United gas at Perryville and Kosciusko. Staff, on the other hand, imputed mileage to the United purchases, even though it included none of the transmission costs associated therewith as part of Southern's transmission costs to be allocated. Georgia Industries' witness followed staff in imputing mileage to the United gas, but he sought to estimate that part of the cost of the United gas representing the cost of transmission and transferred it from Southern's production costs to its transmission costs before making his allocation.

The effect of excluding the mileage imputed by staff to the United purchases is similar to that which results from rolling in the mileages on Southern's system west of Kosciusko and Gwinville. The effect is to shift costs from nonjurisdictional sales to jurisdictional sales; and further, to the extent that the same method is used to allocate jurisdictional costs between zones, the effect is to decrease costs in Zones 1 and 2 and to increase costs in Zone 3.

Staff's allocation witness admitted that the imputation of mileage to these purchases, while including the transportation costs associated therewith under production rather than transmission, is not an ideal way of handling the allocation; but that it is nevertheless the most reasonable under the circumstances presented in this case. Ideally, the portion of the cost of the United gas relating to transmission should be separated out and broken down between demand and commodity, and as so classified should be included in Southern's transmission costs for the purpose of allocating them on the Mcf-mile basis. However, the data necessary for breaking down the cost of the United gas in this way was not available to staff's witness in this case, and he could find no reasonable basis for estimating the cost of transportation on the United system. He nevertheless concluded, and we agree, that an assignment of mileage to the volumes delivered to Southern by United at Kosciusko and Perryville should be made to avoid a distortion in the allocation for which there is no justification. This distortion, which arises from the allocation of the entire cost of the United gas as a cost of production on the basis of volumes alone, even though a part of it is in fact transmission cost which should be allocated on the basis of Mcf-miles, can at least be partially offset in the allocation of Southern's transmission costs by including in the computation of demand and commodity miles the miles associated with the volumes purchased from United. The allocation should reflect as closely as possible the mileage which properly relates to the transportation of the gas from its source to the various points of delivery on Southern's system, duly weighted to give recognition to the volumes of gas delivered to each of such points.

It is objected that staff, in imputing mileage to the United purchases, used mileages which were unrelated to actual mileages on United's system. Ideally,

staff's imputation should have been based on the actual miles of transportation on United's system related to the cost of transmission included in its rates to Southern; but, as in the case of the cost of transmission, such data with respect to mileage was not available to staff's witness in making his allocation study for this case. He used, instead, mileages representative of Southern's system, which he knew to be less than United's mileages. Thus, on the basis of the weighted average distance which gas purchased by Southern from all other sources of supply traveled over Southern's own supply system, staff's witness attributed 133.11 demand miles and 128.49 commodity miles to the United gas delivered at both Perryville and Kosciusko. In our judgment, this is a reasonable solution to the problem of allocating costs to the United gas on a mileage basis in the absence of more specific data with respect to United's operations, and we shall accept it for the purpose of determining Southern's rates in these proceedings. However, our approval of staff's treatment of United's transmission costs and its method of imputing mileage to the United gas in this case should not be construed as constituting a precedent to be followed in future cases. In our discussion above, we have indicated the methods ideally to be employed in the treatment of the transmission costs and mileage associated with the purchase of gas from United, and it is our expectation that the parties in subsequent cases will develop on the record the facts which are necessary to permit the allocation of costs consistent therewith.

D. *Allocation of Jurisdictional costs to zones*

There is a sharp division of opinion among the various parties to these proceedings as to how Southern's jurisdictional costs should be allocated to Southern's zones. Such an allocation is essential to the design of rates for each of the zones, and is determinative of the total costs to be returned through such rates by jurisdictional customers in each zone.

Although Southern allocated total system costs between jurisdictional and nonjurisdictional sales on the basis of the Mcf-mile method, using volumes to allocate production costs and volumes weighted by miles to allocate transmission costs, it departed from this method in allocating the resulting jurisdictional costs to its rate zones. Instead, it used a historical revenue method under which it allocated such costs in proportion to the revenues which would have been produced by the application of its prior effective rates to the test year jurisdictional sales in each zone. By this method, each rate zone would bear approximately the same percentage increase in revenues to be returned.

In support of this method of allocation, Southern points out that the preservation of historical rate differentials between zones and the allocation of approximately equal percentage increases to each of the zones are consistent with Southern's rate history going back to its first rate case in 1946, and that Southern's rates historically have given substantial weight to the distance factor. Southern further notes, and its allocation witness so testified, that had these historical relationships been ignored, and its jurisdictional costs been allocated on the Mcf-mile method, a much greater percentage of increase would have been allocated to Zone 3 than to Zone 2, with the result that rates in Zone 3 would have been so increased as to price large quantities of gas out of the industrial market. A substantial loss of sales in Zone 3 would have the effect of causing Southern to seek a further increase in rates which, in turn, would result in a further loss of sales, thus causing a spiral of increased rates on Southern's system.

Staff's allocation witness presented an allocation of jurisdictional costs to zones on the Mcf-mile method. This is the method of allocation which the

Commission used as a basis for its determination of zone rates in the *Northern Natural*, *Kansas-Nebraska*, and *Tennessee* cases cited above. However, as in those cases, where the Commission did not prescribe zone differentials in strict reliance on the Mcf-mile allocations but gave weight to historical factors as well, staff's rate design witness in this case modified the Mcf-mile cost allocation so as to avoid an abrupt departure from established historical revenue patterns. Thus, in arriving at the zone allocations to be used in designing Southern's rates, staff allocated production costs by volumes, and transmission costs 50 percent by Mcf-miles and 50 percent on the basis of the historical revenue pattern established in Docket No. G–13258, Southern's last rate settlement case (19 FPC 565).

Both Alabama Gas and Georgia Industries would use Mcf-miles in allocating transmission costs to zones, Alabama Gas adhering strictly to the Mcf-mile method, and Georgia Industries adding the annual capacity factor employed under its "Annual Capacity" method discussed hereafter. The positions taken by other interveners reflect their geographical interests, the Zone 3 interveners in general supporting the historical revenue method employed by Southern, and the Zone 2 interveners supporting the straight Mcf-mile method utilized by Alabama Gas.

We have already found that the Mcf-mile method of allocation best gives recognition to the distance of transmission required to effect deliveries at the various points of sale on Southern's system, and have approved its use herein with respect to the allocation of system costs to jurisdictional and nonjurisdictional sales. Consistency would argue for the use of this same allocation procedure in assigning jurisdictional costs to Southern's zones, and we have no doubt but that the application of the Mcf-mile method to Southern's jurisdictional costs would result in an allocation which reflects with reasonable accuracy the relative cost of providing service to its jurisdictional customers in each zone. However, the impact of the straight Mcf-mile method of allocation, in terms of its effect on Southern's markets, would be too severe, in our opinion, to justify its use in this case and at this time without some modification giving recognition to the historical pattern of revenues which has heretofore been developed through Southern's various rate settlements. Precedent for such modification by the weighting of Mcf-mile costs with historical considerations, when first applying the Mcf-mile method of allocation to a zone rate structure, is found in the cases cited above. The allocation of transmission costs 50 percent on the basis of Mcf-miles and 50 percent on the basis of historical revenues, as recommended by staff, was employed by us in the *Tennessee* case, Opinion No. 352, cited; and in our judgment this represents a fair and reasonable means of adjusting the costs in Southern's zones in the present case so as to avoid undue disruption of established marketing patterns.

The economic factors justifying such an adjustment of the costs which would otherwise be allocated to each zone under the Mcf-mile method are well documented in the record before us. Southern serves an area of the United States which does not experience prolonged periods of cold weather, and consequently has a high percentage of sales for industrial use, either directly or through its resale customers, to balance its firm loads for domestic and commercial use. Approximately 50 percent of Southern's jurisdictional deliveries are for resale to industrial customers, with residential and commercial firm loads operating at about 30 percent annual load factor. Of its total system deliveries, approximately 25 percent is sold directly to industrial customers, the bulk of such sales being on an interruptible basis. Economic

operation of Southern's system requires the maintenance of these industrial loads,[26] which have been built up on the basis of the rate patterns heretofore evolved through a series of rate settlements approved by the Commission. During recent years, however, the competitive position of gas with coal on Southern's system has deteriorated due to the increased cost of gas and the availability of lower priced coal. Reduced rail rates for coal transported on a "point-to-point" basis and in discount quantities have caused several electric power companies to turn to coal rather than gas for the operation of steam-electric generating stations. Southern's distributing company customers, especially, have found the competition of coal for their industrial resales increasingly difficult. An abrupt change from historical revenue patterns to rates based on a strict Mcf-mile allocation of costs, under these circumstances, would be unwise. A loss of industrial sales which would result in higher unit costs for firm residential and commercial consumers is to be avoided if possible. At the same time, we cannot disregard the costs involved in serving interruptible industrial customers, and the public interest requires that they should pay a fair share of Southern's cost of service. The 50–50 allocation of transmission costs here adopted represents a move in the direction of rate differentials between Southern's zones which are more truly cost oriented, while preserving enough of the historical relationships between zones to void unwarranted disruption of the marketing patterns which have been developed by Southern and its customers.

E. *The annual capacity method*

Georgia Industries' witness sponsored a method of classification and allocation which is referred to as the "Annual Capacity" method. This method involves a radical departure from *Atlantic Seaboard* in the classification of costs, and introduces an annual capacity factor in weighting volumes and Mcf-miles for the purpose of allocating costs between jurisdictional and nonjurisdictional sales as well as between Southern's rate zones.

In classifying costs under this method, Georgia Industries' witness considered all costs as either variable or fixed, except for return and associated income taxes which he classified 85.56 percent to fixed costs and 14.4 percent to variable costs, and purchased gas cost which he classified in accordance with the manner billed to Southern. Thus, no consideration is given in the classification of costs to the fact that part of the fixed costs properly should be charged to Southern's interruptible customers. Instead, this method seeks to adjust for the necessity of charging a fair portion of fixed cost to interruptible customers by introducing an annual capacity charge to interruptibles in the allocation process. This method assumes that excess capacity on Southern's system is created by reason of the fact that the demand requirements of firm customers exceed their average daily requirements, and that this excess capacity should be paid for by interruptible customers to the extent used by them. Accordingly, the amount of such excess capacity is computed, together with the costs associated with it, and a charge of half of those costs is made against the interruptible customers, with an offsetting credit to the firm customers who created the capacity. Apart from this adjustment, the total of fixed costs, or capacity charges, is allocated on the

[26] The importance of industrial sales to Southern's system operations is heightened by the fact that Southern has no available underground storage facilities. Southern must therefore either market its minimum commitments for purchased gas or pay for gas not taken. During the test year Southern's total volume of purchased gas exceeded its minimum take-or-pay requirements by only 2.3 percent.

basis of annual capacity, which for the allocation of production costs is computed as the peak day deliveries multiplied by 345 days, and for the allocation of transmission costs is computed as the Mcf-miles of peak day deliveries times 345 days. The total of variable costs, or commodity charges, is allocated on the basis of the Mcf-mile method.

There is no substantial justification for a departure from the methods of classification and allocation consistently adhered to by this Commission. The "Annual Capacity" method proposed by Georgia Industries is a novel idea; but, in our judgment, it does not sufficiently reflect the realities of the peak and annual cost responsibilities of Southern's customers, either by class or by geographical location. There are certain obvious shortcomings in its operation and its results which justify its rejection. First, the method erroneously assumes that all of Southern's nonjurisdictional sales are interruptible sales, and that all sales to its jurisdictional customers are firm sales. On the basis of this assumption the excess capacity costs are charged against the nonjurisdictional sales and credited to the jurisdictional sales. Since none of the fixed costs of Southern's operations are included in the commodity charges allocated to Southern's jurisdictional customers, the result is that the interruptible sales to these customers bear none of the responsibility for such charges. To the extent that the commodity charges are thus understated, the demand charges for firm deliveries are overstated, placing an unwarranted burden on domestic and commercial consumers. This result would be especially onerous to low load factor jurisdictional customers.

Further evidence of the fact that the commodity charges developed under the "Annual Capacity" method are unrealistically low is found in a comparison of the commodity rates proposed by Georgia Industries for Southern's three zones with Southern's cost of purchased gas. The commodity rates so proposed are 19.07 cents in Zone 1, 19.43 cents in Zone 2, and 20 cents in Zone 3. The average cost of Southern's purchased gas for the test year was 19.661 cents per Mcf, or 18.539 cents based on the commodity component thereof. The significance of this comparison with purchased gas costs is evident when it is recalled that Southern's own production constitutes only 8 percent of its gas supply, and that the gas which it purchases comprises the bulk of its deliveries throughout the year.

We would also note that we can find no sound basis for assigning different unit costs to jurisdictional and nonjurisdictional sales of the same character and at the same place, as is done by the "Annual Capacity" method with respect to interruptible sales. We would question, too, the appropriateness of Georgia Industries' assumption that the multiplication of the peak day volumes by 345 is a proper measure of annual capacity on Southern's system. In summary, we can discover no substantial justification in the record before us for the procedures followed by Georgia Industries in the application of its "Annual Capacity" method of classifying the allocating costs.

F. *Cost allocation summary*

An allocation of Southern's cost of service, reflecting the disposition herein made of the issues raised with respect to classification and allocation, is set forth in Appendix B attached hereto.

V. Rate Design

Three basic problems are presented in connection with the design of rates for Southern's system. First, is the matter of Southern's zone structure, and the

propriety of the consolidation of Zone 3–A into Zone 3.[27] Second, is the derivation of adjusted zone costs representing the level of revenues to be recovered from Southern's jurisdictional customers in each zone. Third, is the determination of appropriate rates to recover such revenues in each zone.

Southern first applied for a consolidation of Zone 3–A into Zone 3 as part of its application for tariff changes in Docket No. G–18512. The changes so proposed in that prior docket became effective, subject to final determination after hearing, on November 1, 1959. The same three-zone structure was embodied in the subsequent filings in Docket Nos. G–20509 and RP60–15. Southern's customers have presented no substantial objections to the three-zone arrangement, and no alternative plans have been suggested. Staff's rate design witness testified that the proposed zone structure is an improvement over the prior division of Southern's system, even though the consolidation may not produce a perfect three-zone system. Under the circumstances, we shall approve the consolidation as herein proposed, but without prejudice to any later determination by the Commission with respect thereto.

We have already considered the need to adjust the straight Mcf-mile allocation of costs between Southern's various zones so as to give recognition to historical factors in determining the level of revenues to be recovered in each zone. As noted in our discussion of the allocation questions, we are adopting the modification proposed by staff's rate design witness, whereby 50 percent of the transmission costs are allocated by the Mcf-mile method, and 50 percent are allocated on the basis of the historical revenue pattern established in Docket No. G–13258.

The same economic factors cited above as giving justification for the modification of the Mcf-mile method of allocation for the purpose of designing Southern's rates, are applicable in considering the relative levels of demand and commodity charges to be fixed in each zone. All of the parties to this case recognize the importance to Southern's operations of its industrial sales; and realize that a loss of such sales through an increased commodity charge, would permit gas to be replaced by coal for industrial use, would result in higher unit costs for firm residential and commercial users. Although the rates urged by the various parties differ, since they are computed on the basis of differing costs of service, cost classifications, and allocations, it is generally agreed that the commodity component of Southern's contract-demand rates applicable to sales for resale to industry should not exceed the levels proposed by Southern, and presently effective subject to refund, if Southern is to maintain its sales for industrial use in competition with coal. We recognize the need for Southern to maintain its interruptible industrial loads, and the record supports the conclusion that Southern's presently effective commodity charges cannot be increased without inducing a loss of industrial sales. It does not follow, however, that Southern's rates should be designed to retain these sales without regard to the cost of supplying the service rendered. Indeed, these sales should pay a fair share of Southern's costs; and in determining whether to depart from demand and commodity costs as allocated for the purpose of designing rates which will retain the industrial loads, consideration must be given to the correlative impact of such a departure on Southern's firm customers. There is a crossing point—a point where the additional costs to the firm customers which flow from a shift of costs from the commodity component to the demand component, would exceed the additional costs which flow from a loss of sales.

Staff's rate witness worked out contract demand rates for Southern on four bases. These four designs are representative of the designs presented by the

[27] See note 5, *supra*.

various parties to recover the demand and commodity costs allocated to each of Southern's zones.

Basis No. 1. The demand and commodity components of the rates under this basis represent the unit demand and commodity costs for each zone. Under this basis there is a direct translation of allocated demand and commodity costs into rates. As computed by staff on the basis of staff's classification and allocation of costs, the Basis No. 1 CD rates are as follows: Zone 1, $1.15 demand and 22.4 cents commodity; Zone 2, $1.80 demand and 24.32 cents commodity; and Zone 3, $2.10 demand and 26.62 cents commodity.[28]

Basis No. 2. Under this basis, the rates are worked out to reflect historical commodity charge differentials of 1.8 cents between Zones 1 and 2, and 1.3 cents between Zones 2 and 3. The dollar amounts flowing from the change in differentials from the Basis No. 1 rates are included in the demand component. Staff's rates under this basis are: Zone 1, $1.27 demand and 21.68 cents commodity; Zone 2, $1.95 demand and 23.48 cents commodity; and Zone 3, $2.61 demand and 24.78 cents commodity.

Basis No. 3. This basis incorporates Southern's presently effective commodity charges, which Southern claims and we find are the maximum that can be charged without loss of additional sales. The demand charges under this basis represent the difference between the total revenue requirements for each zone and the commodity charges as so set. These rates, as computed by staff, are: Zone 1, $1.51 demand and 20.24 cents commodity; Zone 2, $2.15 demand und 22.37 cents commodity; and Zone 3, $2.92 demand and 23.67 cents commodity.

Basis No. 4. In presenting this basis for the design of Southern's rates, staff offers something new insofar as pipeline rate structure is concerned. This basis involves a two block commodity charge similar to that heretofore used in the electric industry, and a demand charge which is the same as that developed under Basis No. 1. Under this basis, the revenues to be recovered in each zone through the commodity charge equate to the commodity costs as allocated, and the demand revenues similarly equate to the allocated demand costs. The first block of the commodity charge is applicable to a volume of gas equal to the first 10 days' use of monthly billing demand, which is about 33 percent load factor. The second block applies to all gas in excess of 10 days' use. On Southern's system, the industrial sales reflect operations at a load factor in excess of 33 percent, so that the second block applies primarily to gas sold for industrial use. The second block commodity charges are the same as those under Basis No. 3—namely, those proposed by Southern in these proceedings, and presently in effect. The unit charge for the first block of the commodity charge is set at a level which, when added to the charges under the second block, will return Southern's total commodity costs. As presented by staff, these rates are as follows: Zone 1, $1.15 demand, 23.94 cents first block commodity, and 20.24 cents second block commodity; Zone 2, $1.80 demand,

[28] We include staff's computation of the rates under each basis for illustrative purposes only—to show the relative level of the rate components in each zone as they would appear under each method of design, and not necessarily to show the correct computation of the rates under each method. In our judgment the demand and commodity costs to be used as the basis for computing the demand and commodity components of the Basis No. 1 and Basis No. 4 rates properly should reflect the costs as allocated by the 50–50 method discussed above. Since staff's computation of the Basis No. 1 rates reflects commodity costs as determined by a straight Mcf-mile allocaton and total costs as determined by the 50–50 method, and since staff's Basis No. 4 rates utilize the demand charge as determined under Basis No. 1, the rates cited here are not to be relied on as indicating the exact level of the rates which we would compute under these two bases.

25.82 cents first block commodity, and 22.37 cents second block commodity; and Zone 3, $2.10 demand, 31.55 cents first block commodity, and 23.67 cents second block commodity.

Of all of the parties to these proceedings only Georgia Municipal Association recommends the design of rates under either Basis No. 1 or Basis No. 2. Southern and most of the interveners urge the adoption of rates designed in accordance with Basis No. 3. Staff recommends its Basis No. 4. Atlanta Gas and South Atlantic Gas Company, Zone 3 interveners, and Southern's largest and fourth largest customers, respectively, favor Basis No. 3, but would accept Basis No. 4 as an alternative. South Carolina Natural Gas Company, also located in Zone 3, and Southern's third largest customer, supports staff's recommendation for Basis No. 4.

There is little doubt that Southern would lose industrial sales under either Basis No. 1 or Basis No. 2, although the record does not disclose the approximate volumes which would be lost. Even though the dollar effect of such losses on Southern's customers cannot be determined exactly, we are convinced that the adverse impact of increased costs to residential and commercial consumers would be such as to be avoided if at all possible. We turn, therefore, to a consideration of Basis No. 3 and Basis No. 4, under which the commodity charge for industrial sales is set at the maximum which Southern can charge and still retain its interruptible loads. As between these two bases, it is our judgment that the Basis No. 4 rates offer clear-cut advantages from the regulatory viewpoint over the Basis No. 3 rates.

Staff's Basis No. 4 rates were designed so as to preserve the principles of the *Atlantic Seaboard* method of rate-making, while at the same time enabling Southern's distributors to retain their industrial business. The rates represent a reasonable compromise between the divergent interests in these proceedings. The commodity charge applicable to industrial sales is the same under Basis No. 4 as it is under Basis No. 3; yet Basis No. 4 avoids the heavy shift of costs to demand found in the Basis No. 3 rates, which would impose a more severe burden on Southern's low load factor customers. Many of Southern's low load factor customers would obtain lower annual billings under Basis No. 4 than they would under Basis No. 3. Of special importance is the fact that savings to low load factor customers would be greatest during the summer months when they take less than 10 days' use of their billing demands. This is due to the substantially lower demand charge under Basis No. 4.

Although the adoption of rates designed in accordance with Basis No. 4 may require Southern's distributor customers to redesign their retail rates in some instances, we cannot find that this presents any serious obstacle to the effective use of Basis No. 4. In any event, the problems confronting the distributors in their retail rate designs are beyond the scope of this Commission's jurisdiction, and are within the purview of local regulatory bodies.

The exigencies of this case, and the responsibilities reposed in us by the Natural Gas Act, require that we make every effort to adopt a rate design which will retain a relatively high level of industrial sales in Southern's service area, without imposing a larger than necessary share of demand costs on low load factor distributors, and without unduly burdening the residential and commercial customers served by such distributors. We are of the opinion that staff's Basis No. 4 best accomplishes this result.

With respect to Southern's small general service rates, both Georgia Municipal Association and Alabama Municipal Gas Association urge that the increases to be allowed in these rates be computed on an "Mcf" basis rather than on the basis

recommended by staff or Southern. The levels of the G rates which Southern filed were determined by increasing the then effective G rates by the same percentage as the overall system rate increase. Staff proposed G rates determined by increasing the G rates in Docket No. G–13258 by the average percentage increase for each rate zone. The G rates, as computed by Southern and by staff are roughly equivalent to the cost of gas to a CD customer buying at about 40 percent load factor. Since the G customers purchase gas at an average load factor of approximately 25 percent, the preference accorded such customers is apparent. The intervening municipal associations, however, would seek an even greater preference than that contained in the rates as computed by Southern and by staff. They contend that the increase in the G rates in each zone should be the same as the average increase per Mcf for all jurisdictional sales in that zone. On this basis the increased G rates would be equivalent to CD rates at a load factor of 48 percent in Zones 1 and 2, and 76 percent in Zone 3. On the record before us, we can find no substantial justification for allowing an increase in the G rates for each zone less than the percentage increase herein allowed with respect to all of Southern's rates in each zone. The G rates shall therefore be computed in accordance with staff's recommendations.

Attached hereto, as Appendix C, is a summary of Southern's rates in Docket No. RP60–15 reflecting our determinations with respect thereto, as made above. These are the rates which we find to be just and reasonable for the period commencing August 13, 1960, and for the future in that docket. The just and reasonable rates in Docket No. G–20509, for the period June 1, 1960, through August 12, 1960, are those which shall be computed on the same basis as the Docket No. RP60–15 rates in Appendix C, but which reflect the lower cost of gas purchased by Southern from United during that period, as shown in Southern's filing in Docket No. G–20509.

As already noted, the difference in the cost of purchased gas reflected in the rates found to be just and reasonable in each of the instant dockets is based on the increased rates filed by United in Docket No. RP60–2. On June 15, 1961, these United rates were superseded by even high rates filed by United in Docket No. RP61–18. Subsequently, United filed a third increase in Docket No. RP63–1, which was suspended by the Commission until January 1, 1963. Southern has not filed increases in its rates to offset these further increases filed by United. Meanwhile, by order of March 12, 1962, 27 FPC 504, the Commission approved a settlement of United's increased rates in Docket No. RP60–2, ordering refunds to Southern which Southern has in turn refunded to its customers. These refunds covered the period from August 13, 1960, through June 14, 1961. Since the cost of gas purchased from United after June 14, 1961, has been higher than the cost of such gas as reflected in Southern's cost of service in Docket No. RP60–15, and since Southern has absorbed this increase in cost resulting from United's subsequent rate filings, we shall not make any adjustment at this time in Southern's rates in Docket No. RP60–15 to give effect to the United settlement in Docket No. RP60–2. Instead, we shall condition the rates herein found to be just and reasonable so as to require appropriate adjustment and refunds to reflect our disposition of United's rates in Docket Nos. RP61–18 and RP63–1.

The Commission finds:

(1) Southern Natural Gas Company is a natural-gas company subject to the provisions of the Natural Gas Act, and the sales of natural gas for resale which are the subject of this order are sales of natural gas in interstate commerce and are subject to the jurisdiction of the Commission.

(2) The proposed increased rates and charges filed by Southern in Docket No. G–20509 and contained in the Substitute Original Sheets Nos. 5, 9, 12, 16, 19, 23, 27 and 30 to Southern's FPC Gas Tariff, Sixth Revised Volume No. 1, have not been shown to be just and reasonable or otherwise lawful under the provisions of the Natural Gas Act, and should be disallowed.

(3) The proposed increased rates and charges filed by Southern in Docket No. RP60–15 and contained in the Substitute First Revised Sheets Nos. 5, 9, 12, 16, 19, 23, 27 and 30 to Southern's FPC Gas Tariff, Sixth Revised Volume No. 1, have not been shown to be just and reasonable or otherwise lawful under the provisions of the Natural Gas Act, and should be disallowed.

(4) Southern's just and reasonable rates in Docket No. RP60–15 for the period commencing August 13, 1960 and for the future, are the rates set forth in Appendix C, attached hereto; subject, however, to such adjustments as may be required to reflect on a prospective basis the Commission's determinations with respect to liberalized depreciation and accumulated deferred taxes in *Alabama-Tennessee Natural Gas Company*, Docket No. G–5471, *et al.*

(5) Southern's just and reasonable rates in Docket No. G–20509 for the locked-in period from June 1, 1960, through August 12, 1960, are those set forth in Appendix C for Docket No. RP60–15, but adjusted to reflect the lower cost of gas purchased by Southern from United Gas Pipe Line Company during the locked-in period as set forth in its Docket No. G–20509 filing.

(6) Southern should be required to file substitute tariff sheets, subject to the approval of the Commission, containing the rates herein found to be just and reasonable in Docket No. RP60–15 as set forth in paragraph (4) above.

(7) Southern should be required to refund to its jurisdictional customers at 7 percent interest per annum all amounts which it has collected in excess of the amounts herein found to be just and reasonable in each docket as set forth in paragraphs (4) and (5) above.

(8) Southern should be required to refund to its jurisdictional customers the appropriate portion of any refunds which it may receive from United in Docket Nos. RP61–18 and RP63–1, to the extent that such refunds reflect reduced rates in those dockets which are below the rates originally filed by United in Docket No. RP60–2. In addition, Southern should be required to refund to its jurisdictional customers the proportionate part of any refunds received from its producer-suppliers, attributable to gas purchases during the period the Docket Nos. G–20509 and RP60–15 rates were or are in effect, to the extent that such refunds are based on reductions required or approved by the Commission in rates upon which Southern's purchased gas costs were computed in its cost of service in Docket Nos. G–20509 and RP60–15; provided however, that no such refund, except the last to be made, need be made by Southern in an aggregate amount of less than $200,000.

(9) Southern should be required to adjust on a prospective basis the rates herein found to be just and reasonable for the future in Docket No. RP60–15 to reflect United's rates as finally determined in Docket No. RP63–1, to the extent such rates are below the rates originally filed by United in Docket No. RP60–2. In addition, so long as the Docket No. RP60–15 rates, as established or changed pursuant to this order are in effect, Southern should be required to make appropriate reductions in such rates to reflect the effect on the cost of service determined by the Commission in Docket No. RP60–15 of any reduction in rates made by its producer-suppliers. Such reductions by Southern should be made effective on the first day of the month following the month in which the cumulative effect of such producer-supplier rate reductions, excluding those

given effect by Southern in prior rate reductions, results in not less than a 0.1-cent per Mcf decrease on a system-wide basis in Southern's rates.

The Commission orders:

(A) The proposed increased rates filed by Southern in Docket Nos. G–20509 and RP60–15, and contained in the tariff sheets set forth in finding paragraphs (1) and (2), are hereby disallowed.

(B) Within 45 days from the date of issuance of this order, Southern shall file substitute tariff sheets satisfactory to the Commission containing the rates herein found to be just and reasonable in Docket No. RP60–15 as set forth in finding paragraph (4).

(C) Within 45 days from the date of issuance of this order, Southern shall refund to its jurisdictional customers, for the respective periods covered by each docket, the difference between the amounts collected in each docket under the proposed increased rates contained in the tariff sheets disallowed by paragraph (A) and the amounts which would have been collected in those periods under the rates herein found to be just and reasonable as set forth in finding paragraphs (4) and (5) above, together with interest thereon at the rate of 7 percent per annum from the date of payment to Southern to the date of refund.

(D) The rates herein found to be just and reasonable for the future in Docket No. RP60–15 and to be filed by Southern in accordance with paragraph (B) above, are hereby made subject to and shall be adjusted prospectively as may be necessary to reflect any new policies with respect to the treatment of liberalized depreciation and accumulated deferred taxes which may be established by the Commission in *Alabama-Tennessee Natural Gas Company*, Docket No. G–5471, *et al.*

(E) Within 45 days from the receipt thereof, Southern shall refund to its jurisdictional customers the appropriate portion of any refunds which it may receive from United in Docket Nos. RP61–18 and RP63–1, to the extent that such refunds reflect reduced rates in those dockets which are below the rates originally filed by United in Docket No. RP60–2. In addition, Southern shall refund to its jurisdictional customers the proportionate part of any refunds received from its producer-suppliers, attributable to gas purchases during the period the Docket Nos. G–20509 and RP60–15 rates were or are in effect, to the extent that such refunds are based on reductions required or approved by the Commission in rates upon which Southern's purchased gas costs were computed in its cost of service in Docket Nos. G–20509 and RP60–15; provided however, that no such refund, except the last to be made, need be made by Southern in an aggregate amount of less than $200,000.

(F) The rates herein found to be just and reasonable for the future in Docket No. RP60–15, and required to be filed in accordance with paragraph (B) above, are hereby made subject to and shall be adjusted prospectively to reflect the rates for gas purchased from United as finally determined in Docket No. RP63–1, to the extent that such rates are below the rates originally filed by United in Docket No. RP60–2. In addition, so long as the Docket No. RP60–15 rates, as established or changed pursuant to this order are in effect, Southern shall make appropriate reductions in such rates to reflect the effect on the cost of service determined by the Commission in Docket No. RP60–15 of any reduction in rates made by its producer-suppliers. Such reductions by Southern shall be made effective on the first day of the month following the month in which the cumulative effect of such producer-supplier rate reductions, excluding those given

effect by Southern in prior rate reductions, results in not less than a 0.1-cent per Mcf decrease on a system-wide basis in Southern's rates.

(G) Within 15 days after making refunds in accordance with paragraphs (C) or (E), Southern shall report to the Commission in writing and under oath the amount of the refunds made and the relevant calculations with respect thereto, together with releases from each of its jurisdictional customers.

(H) The consolidation of Southern's Zone 3–A into Zone 3 as proposed by Southern is hereby approved without prejudice to any later determination by the Commission with respect thereto.

Commissioner Ross *filed* a supplemental statement.

Commissioner Morgan *concurring* in result, filed a separate statement.

Commissioner O'Connor *concurring*, filed a separate statement.

Commissioner Woodward, *concurring in part* and *dissenting in part*, filed a separate statement.

APPENDIX A

Southern Natural Gas Co. (Docket Nos. G–20509 and RP60–15), cost of service, system gas operations, 12 months ended June 30, 1959, adjusted

Line No.	Particulars	Total	System gas operations			
			Natural gas production, wellmouth	Natural gas production, other	Manufactured gas production	Transmission (including distribution)
	Operating expenses:					
1	Manufactured gas production	$30,171			$30,171	
2	Natural gas production and gathering	1,717,284	$1,262,161	$455,123		
3	Exploration and development	1,583,659	1,583,659			
4	Other gas supply	71,921,036		71,921,036		
5	Storage	117,696				$117,696
6	Transmission	9,828,203				9,828,203
7	Distribution	803,844				803,844
8	Administrative and general	3,589,663	165,311	280,016	10,547	3,133,789

APPENDIX C

Southern Natural Gas Company, rates for jurisdictional sales

Zone	Rate schedule	Monthly demand charge	Monthly commodity charge
Zone 1	CD–1	$1.27	22.80¢ per Mcf for the quantity delivered during the month equal to 10 days' use of the billing demand. 20.24¢ per Mcf for all additional deliveries per month.
	G–1		36.2¢ per Mcf.
Zone 2	CD–2 and P–2*	1.93	24.65¢ per Mcf for the quantity delivered during the month equal to 10 days' use of the billing demand. 22.37¢ per Mcf for all additional deliveries per month.
	G–2		40.4¢ per Mcf.
Zone 3	CD–3	2.42	28.63¢ per Mcf for the quantity delivered during the month equal to 10 days' use of the billing demand. 23.67¢ per Mcf for all additional deliveries per month.
	G–3		46.9¢ per Mcf.
Zones 2 and 3	EX–1		31.36¢.

*Prior to 11–1–61, Southern's Tariff contained a P–2 rate similar to its CD–2 rate. The P–2 rate was canceled effective 11–1–61 by Commission order issued 10–9–61 in these proceedings, without prejudice to the requirements for refunds thereunder upon termination of the proceedings.

Ross, *Commissioner*, supplemental statement:

In view of the many different interpretations as to the meaning of the *El Paso* decision (Opinion No. 366), issued October 19, 1962, (28 FPC 688), I consider it appropriate to go further than the majority statement and to describe my personal views on the question of pipeline production.

The *El Paso* decision, in my opinion, was not intended to bar the possibility of granting an additional return to a pipeline company to encourage production activities, nor was it intended to advance a general policy discouraging such production. In *El Paso*, we set forth a standard duty of utilities, namely, to operate their properties in a prudent and businesslike manner and to seek to achieve the lowest overall costs for the consumer. This rule applies to the operations which a utility has a duty to perform as part of its public utility function. In this context, it becomes necessary for a utility, in order to receive an additional element of return, to prove that the company is engaged in an activity that it is not required to undertake and one it would not normally pursue, but nevertheless one which results in economic benefits, without undue risk of burdening the public with higher charges or poorer service. To the extent that consumers would provide part of the financial means for engaging in the production business, it is imperative that the results of such contribution be dedicated to the consumer.

Since it is clear this Commission has no authority to order pipelines to engage in the production business, our inquiry extends to a consideration of the nature and extent of the benefits involved and the encouragement required to induce a pipeline to strive to attain the benefits.

Generally speaking, the benefits necessary to justify an additional return are those which permit the more economic supply of gas to a pipeline's customers. Thus, a principal benefit would be established if a pipeline were to show that the impact of its production program actually resulted in a lower city gate gas price to its purchasers. This could be established by a showing that the total unit cost of a pipeline's production was less than the total unit cost of its purchased

gas. In addition, the increased flexibility in meeting system demands and a minimizing of the effects of take-or-pay situations[1] conceivably could be translated into lower overall gas costs. Of course, the extent of the flexibility of the use of gas produced by a pipeline is dependent upon the nature of its agreements with minority interest or royalty owners.

There are other situations, capable of less precise definition, but nevertheless recognizable as beneficial. These would include a company's efforts to assure itself of an independent source of gas at a stable price as an economic brake in the face of steadily rising costs of purchased gas. In addition, it may be desirable to encourage a pipeline to conduct exploratory activities in areas near the company's pipeline, where there is a probability of finding gas in such areas. The extent to which a pipeline's production adheres to conservation practices would also be relevant. For example, the production of gas on a unitized basis should provide benefits which redound to the benefit of the stockholders and customers of a pipeline.

It is quite clear to me, however, that a pipeline advocating an additional element of return on production properties has the burden of making a convincing showing of any advantages it claims. It is not enough to proclaim laudatory statements of intention. Rather, the proof must rest upon the history of the pipeline production operations and by history I mean more than test year data. I mean that data for whatever period necessary to clearly reflect the pattern of a pipeline's system wide production activities. Thus, for example, a pipeline which claims the existence of advantages resulting from the flexibility inherent in its production—as Southern claims here—must show daily deliveries in relation to system demand, together with the alternate methods of meeting such demands.

That there may be benefits is clear. It is also clear that there may be offsetting factors or abuses, and I would expect the Commission's staff and other interested parties to insure that the record is complete with respect to these matters. Evidence of alternative sources of gas at reasonable prices clearly would weigh against the advisability of encouraging a pipeline to undertake its own production. Failure to connect up such sources of gas in order to secure a return on its own wells certainly violates one's sense of conservation and fair play. If a pipeline's production program clearly seems aimed at finding and developing oil properties, then the company's production activities are not such as to warrant an added return paid by pipeline customers. Furthermore, if a company's exploration program is far removed from its pipeline and no prospect of connection in the reasonable future exists, then again the utility of such a program to the principal function of the pipeline is suspect. The actual use of the gas is also pertinent. If a company were to discover large low cost reserves and hold them out, speculating for a higher price on the possibility of the deregulation of the producing industry, or on the possibility of having its gas priced on the basis of area prices or fair field prices rather than on a cost of service basis, its desire to provide economic benefit to the consumer would be subject to question. This would be speculation with the consumer's dollar which I would not encourage. By the same token, substantial off-system sales of gas from a pipeline's own production hardly benefits the consumers who provide the financial means for such exploration and production activities on the basis of receiving benefits therefrom. Another area of possible abuse would be the acquisition of excessive reserves. It is true that present deliverability

[1] In this connection, a pipeline must first demonstrate that gas purchases with take-or-pay provisions oppressive to the company were prudently accepted by the pipeline.

and reserve requirements result in certain holding costs. But this serves as no excuse for exceeding the minimum requirements. Generally speaking, the amount of reserves actually dedicated to the pipeline's customers should be a controlling factor.

Another questionable practice which bears on the return to be allowed for pipeline production is the insertion of take-or-pay clauses in contracts between a pipeline and its production affiliates. This is understandable if the pipeline owns a minor interest in the field or its wholly-owned wells are a small number of a field's total, but where a pipeline affiliate owns and operates substantially all of a certain field, it is inconsistent for the affiliate to charge its parent for gas not taken, particularly when the parent is claiming that its production reduces the take-or-pay problem.

If an added element of return were allowed, I believe we should exercise our obligation to insure that the funds provided by consumers are actually used for their benefit. Accordingly, a Section 5(a) investigation looking toward the lowering of a pipeline's rates would be proper should there be reason to believe that the ratepayers' dollars are not being reasonably and prudently expended to improve the pipeline's jurisdictional service.

With respect to the question of incentive, it is argued that the production business is risky, and risk traditionally commands a higher return to the equity holder. In this connection, I concede that an element of risk may be present in a pipeline's production operations. In analyzing risk, it is necessary to differentiate between the risk to a stockholder in a public utility or similar type of enterprise, and that to a stockholder in an industrial corporation. Generally, a stockholder in an essential and expanding utility operation has reasonable assurance that his company will earn a fair return. Typically, the return may not be as great as that realized in an industrial operation of a more speculative type, but it will usually be more stable through the economic cycle. Assuming therefore, that we are dealing with a public utility, which we are, it would appear that a pipeline stockholder need not and should not expect a rate of return comparable to what can be earned by a non-utility company such as an independent producer. This would seem to be especially true in the case of a pipeline company whose very reason for engaging in production is to serve its jurisdictional customers. The pipeline has a ready market available to it that an independent producer may not have. It can purchase proven reserves rather than having to explore on a wildcat basis. It has substantial resources to self-insure its operations in a way not possible to the independent producer.

I do not say unequivocally that there are no risks to a pipeline company engaged in production of natural gas. As a matter of fact, there can be some risks which go to the final judgment whether to encourage it, discourage it, or adopt a middle course such as the Commission did in *El Paso*, *supra*. For example, while the risk of unsuccessful efforts conducted on a conservative basis have been minimized, a pipeline could experience problems if its exploration and development program were conducted on a large scale in relation to its pipeline operations, and its activities were directed to the wildcatting or other risky exploratory functions, in contrast, for example, to physically less risky developmental efforts conducted on a farm out basis. If a company were to spend large amounts of its retained earnings together with amounts advanced through cost of service and sums borrowed on the general credit of the pipeline and find limited or no volumes, then these expenditures which would be included in the company's cost of service could conceivably increase its overall cost of gas to a point where it might face damaging interfuel competition or competition from other pipelines serving the same area.

ARMY LIBRARY

Another associated risk to a pipeline entering into or enlarging its production business which could be a determinant of its success is its ability to attract a competent organization or to retrain its present personnel.

There is also the risk to the consumer, which must be weighed by the regulatory body, that the pipeline might neglect its primary task of providing a pipeline service.

These questions of risk are integrally related with the question of incentive, and the various risks mentioned above are only examples of the risk factors to be weighed in determining whether to encourage production. A further factor related to any consideration of the need for incentive is the element of risk as measured by investor appraisal.[2]

In addition to the above, Southern argues that it needs the incentive of a higher return to assure that there will be adequate supplies of oil and gas. However, there are many able and competent producers, having efficient organizations and adequate capital, with abundant supplies of gas, and there is no expectation that this abundance will not persist for some time. Accordingly, I am not convinced that we should encourage pipelines to attempt to compete with long established organizations specializing in the field solely for this reason.[3]

If an additional return were to be granted to pipeline companies on their production properties to provide encouragement shown to be required to engage in production, it should be for the purpose of achieving proved benefits for the pipeline's jurisdictional customers, and to offset demonstrated risks to the company's stockholders. Because of the possibility of a company incurring unwarranted costs through imprudent or inefficient production operations, or operations not dedicated to the realization of economies in its jurisdictional business, it would be necessary in each case where additional return is claimed for production operations to consider with great care what part of the company's production properties should be included in its jurisdictional rate base; what part of its costs associated with exploration and development, and production and gathering, should be allocated to its jurisdictional cost of service; and what part of such costs should be considered as reflecting reasonable and prudent production operations. The gas consumer should not be required to underwrite unsuccessful production operations from which he derives no direct benefit unless the costs of such operations were prudently incurred on his behalf. If the consumer pays an additional return to the company's stockholders on successful operations and the reasonable cost of the benefits which he receives from the company's production, he should not be asked to insure the stockholders against the loss of their investment in such operations.

This is by no means intended to comprise an all-inclusive listing of the factors relevant to a consideration of this question in the future. To the contrary, this statement is intended simply to describe some of the factors I consider of significance.

In any consideration of these questions, the ultimate long term economic impact of encouraging pipeline production in terms of general public policy must be kept in mind. If, for example, encouragement of pipeline production begins to lead to a monopolization of the gas producing industry in the hands of a few integrated companies, a change in our policy might well be required.

---

[2] Here I refer not only to generalized opinions but to the cost of capital as measured in the market place for companies engaged in pipeline production.

[3] As to oil, this Commission has no regulatory authority, and I would not seek to influence the industry with respect to its oil reserves.

It is conceivable that all pipelines might find it necessary to engage in production in order to survive, and that the large producers might at the same time seek to invade the pipeline industry to assure their own survival. The final result could well be the disappearance of the small wildcatter who has contributed his daring and skill to the discovery of many of our large important fields.

It has been urged that this Commission has a moral or ethical obligation to grant an additional element of return in view of the *Panhandle* case[4] and others where it has been said this Commission urged the companies to engage in production and agreed to provide the incentive. First of all, the general attitude of the majority here is not such a sharp departure as some might contend. In *Panhandle*, the Commission sought to encourage pipeline production because of its conviction that benefits would result—benefits, incidentally, of precisely the same nature as described herein. I would encourage pipeline production when convinced that such advantages are present and made available to the consumer giving due consideration to the risks involved and the offsetting factors mentioned above.

Secondly, I question somewhat the role of pipeline production in view of the evidence adduced in this case showing that pipeline production accounted for 40 percent of requirements in 1948 compared to 11 percent (with respect to the 10 largest pipelines) in 1959.

There is, however, a major difference in what I conceive is the attitude of a majority of the present Commission as contrasted with that expressed in *Panhandle* and similar decisions. This difference is one required by law, namely, that we will not take it on faith that pipeline production effectuates advantages, but rather require a factual demonstration of advantages which are alleged.[5] It is an established legal principle that a regulatory agency must make its findings on the basis of a record and the majority has demonstrated its intention to adhere to this requirement. Also it is clear a regulatory agency cannot bind itself to act in the future.

In conclusion, as to the fundamental principle whether a pipeline should receive an additional rate of return on its production properties, it is my conviction that before such additional compensation is allowed, there must be a record showing that the pipeline company's production operations are in practical effect a benefit to consumers, and that a special incentive is required to produce these benefits. To do otherwise would be to abdicate our responsibilities under the Natural Gas Act.

MORGAN, *Commissioner*, concurring in result:

Here, as in *El Paso*, 28 FPC 688, we find ourselves divided and perhaps confused by the question whether we are justified in granting a premium or "incentive" rate of return for the well-mouth properties and production activities of pipelines.

Of the various separate statements on this subject filed in connection with the opinion here issued, I find myself most nearly in agreement with that contained in the majority opinion itself. With the dissenting opinion I find myself in nearly total disagreement, and while there is much in Commissioner Ross's statement which a thoughtful person may well ponder, it raises many unanswered questions and fails to outline any clear avenue of policy as a guide, either for industry or for this Commission.

---

[4] *Panhandle Eastern Pipe Line Co., et al.*, 13 FPC 53.
[5] *City of Detroit* v. *F.P.C.*, 230 F. 2d 810 (C.A.D.C., 1955).

With respect to the discussion contained in the majority opinion, I must point out a similar failure to articulate a sufficient and supportable public policy on this important question.

Let us consider the following two paragraphs from the majority opinion:

> In general it would warrant allowance of an additional return on production property if a pipeline made two showings. First it must demonstrate that the production activity is being carried on for the sole purpose of supplying gas to its pipeline customers. This requirement cannot be fulfilled by mere statements of intention, but must rest upon the history of the pipeline production operations and the commitments the pipeline has made by practical dedication of its production properties to pipeline service. It should not need argument to support the conclusion that *if a pipeline is engaging in production operations for the benefit of groups other than its customers, the customers should not be paying a premium return on the production property.*
>
> A second essential showing is that the production operation has been so conducted that it is or will be of practical economic advantage to the pipeline's customers. *A pipeline whose production properties make no demonstrable contribution to reduction of costs or improvement of service is likewise in no position to demand a premium return on its production investment.* [Emphasis supplied.]

It is easy to agree with these statements as far as they go, but as I shall demonstrate, they do not go far enough. It is not enough to say that utilities which fail or are unable to make the showings specified above are in no position to demand *premium* rates of return. The plain fact is that utilities which cannot make the required showings stand in no position to demand *any* rate of return—at least on those properties for which they have failed, when challenged, to make such a showing. Indeed they stand in some danger of disallowance (for rate-making purposes) of cost-of-service items in connection with the operation of such properties.

There is nothing new or startling about this position. For decades it has been standard practice of regulatory agencies to insist that utility undertakings must meet and pass a standard test: that their properties are "used and useful," as well as appropriate by standards of prudent management, for the service of consumers who are required to pay for them through rates having the force of public law. This concept is so old and so well-established in law, including judical decisions too numerous to list here, that perhaps the strangest aspect of the matter is the need to mention the existence of such a concept in this concurring statement at all.

Clearly, the Commission in past years has allowed this concept to fall into disuse. The list of cases presented by Commissioners O'Connor and Woodward, wherein the Commission allowed premium rates of return on well-mouth properties without rigorously subjecting those properties to the "used and useful" test is in itself enough to demonstrate that fact. It is altogether possible that the present Commissioners, including myself, were remiss in our application of that test in *El Paso*, but at least we did not compound any error we may have committed by allowing a *premium* rate of return on well-mouth properties, some of which might possibly have failed to meet the test.

In any event, the criteria set forth in the two paragraphs I have quoted from the majority opinion are *not* tests of the propriety of an extra rate of return. On the contrary they are tests of the propriety of including certain property in the rate base, or of excluding it therefrom. Hence they constitute the mini-

mum test necessary before even a minimum rate of return on such property may be allowed.

Immediately following the two paragraphs I have already quoted and discussed, the majority opinion sets forth this comment:

> In *El Paso* we discussed the question whether production operations of a large pipeline system involve additional risk for which it should be compensated. This is indeed a factor, but we emphasize that there can be no reward supplied by a pipeline's customers for risk which is not incurred in a successful effort to improve the economics of pipeline gas supply. *The risk factor, we conclude, is not determinative, but rather the key question is whether the consumers can equitably be asked to provide an additional element of return on account of production investment. Before this Commission could recognize an equitable obligation to allow such additional compensation, we would require a record showing that the production operations were, in practical effect, a benefit to consumers.* [Emphasis supplied.]

As can be seen, that paragraph is circular in its reasoning. It disposes of the risk factor by adverting again to the "used and useful" test, which I have already shown is not determinative of a *premium* rate of return.

I believe that, after the "used and useful" test has been successfully negotiated, the presence or absence of a pronounced risk factor may well be determinative of this question, if risk is found to be the crucial factor determining shortage or adequacy of capital supply.

In dealing with the question of a proper rate of return we must determine the lowest rate of earning on securities necessary to attract the needed capital of investors to carry on a given enterprise. Orthodox financial theory holds that there is a direct and sensitive relationship between, (a) the respective rates of earning regarded by investors as satisfactory and (b) the respective degrees of risk to which their investments may be subjected. Classic market theory maintains that all informed investors consider this relationship to be the pivotal point in the making of any investment. It is not uncommon to find the same investor, on the same day, purchasing two issues of securities, one of which indicates very low prospective earnings from an extremely safe enterprise, and the other indicating prospective earnings two or three times as high from a comparatively risky enterprise. Such an investor obviously considers the disparity in opportunity for earnings to be balanced by the disparity in risk to his money. Or to put it more simply, if possible, he tends to associate the factor of added risk directly with the factor of premium return. *He is only willing to incur the one if he has an opportunity for the other.*

From the foregoing I am convinced that the burden of proof which must be shouldered by a pipeline company which applies for premium rates of return on well-mouth properties is twofold: First, to justify a normal rate of return, it must show that all property and expenses involved are used and useful in the service of its customers; and second, to justify a premium rate of return, it must show that its production activities are accompanied by such an unusual degree of risk to the pipeline company that they cannot be financed except by the allowance of a premium rate of return. It goes without saying that this second step must include a solid demonstration of that specific rate of return required by real—not theoretical—conditions in the money market and in the producing industry generally.

For it should be pointed out that under real conditions of the market place the collective judgments of investors sometimes result in departures from classic

market theory, in that high-risk industries sometimes yield low earnings and vice versa. For example, some industries ordinarily thought of as risky may have such sweeping tax advantages that they can generate most of the needed capital themselves while enjoying an oversupply of outside capital, with the result that there is substantial over-investment despite a surprisingly low rate of return. The oil industry in Texas, now operating only eight days a month, appears to be such an example.

Our statutory responsibility in this matter is plain.

When we set a rate of return for an enterprise within our jurisdiction under the Natural Gas Act, we are obliged to set that rate of return at a level which will produce "just and reasonable rates." And the Supreme Court has more than once reminded us that in each instance this means "the lowest possible reasonable rate." It is difficult to see how we can carry out that responsibility if we allow premium rates of return to be established for any other reason than *proof* of that which is presumed to be the operative causal factor in the money market: namely, an added degree of risk plainly requiring such a premium in order to attract capital. For if that factor is missing (or is exaggerated) we shall have allowed the establishment of a higher level of prospective earnings than is demanded by the prospective investor based on the risk to his money. And this will inevitably confront the consumer with rate levels higher, by definition, than necessary; and therefore, also by definition, higher than "just and reasonable."

It is possible to say a great deal at this point concerning the degree of risk actually attendant upon production activities by pipelines, as well as the rate of return actually earned by the producing industry generally, but that is not necessary here. We may properly wait upon an applicant, unlike Southern Natural, which has attempted to shoulder the necessary burden of proof.

O'CONNOR, *Commissioner*, concurring:

While most of this opinion relates solely to the operation of Southern Natural's system, one aspect will have a direct and important impact on the plans of many pipeline companies. I refer to the discussion of rate of return on investment in production properties. The Commission here refuses to allow additional return on Southern's production investment, citing in support of its decision certain deficiencies in Southern's proof. Although I agree that the record does not justify granting additional return in this case, I believe further Commission guidance is compelled by the history and nature of this problem. For here, as in the *El Paso* opinion, the Commission fails to describe in adequate detail the circumstances in which additional return will be granted on investments in production property.

In dealing with this matter the Commission does not write on a clean slate. Its actions take place in the context of regulatory policies, judicial decisions and industry development of the past decade. It is only from this vantage point that the impact of today's decision can be appreciated.

COMMISSION POLICY. Prior to 1954 the Commission had been divided on the question of the appropriate treatment of pipeline-produced gas. See Natural Gas Investigation of 1948, Smith-Wimberly Report, 234–35, Olds-Draper Report, 117–158; *Northern Natural Gas Co.*, 11 FPC 123 (1952); *Northern Natural Gas Co.*, 12 FPC 66, 77–82 (1953) (dissenting opinion of Commissioner Buchanan). However, from January 1954 until the recent *El Paso* decision, the Commission consistently granted extra compensation for pipeline production.

The initial definitive decision in this area came in January 1954 in *Panhandle Eastern Pipe Line Co.*, 13 FPC 53. The Commission there held that gas produced by Panhandle should go into its cost of service at a fair field price rather

than on a cost basis. Its reasoning was founded on three governing factors: (1) the numerous advantages of pipeline production to consumers; (2) the inability of the Commission to compel pipelines to engage in exploration and development activities; (3) the actual drop in pipeline production when regulated on a strict cost-of-service basis. The Commission concluded: "If there is to be natural-gas exploration, development, and production by pipeline systems themselves therefore—with resultant benefits to the public interest—it follows that this must result from regulatory policies designed to encourage, rather than to penalize, such activities." 13 FPC at 74–75.

In November 1954 the Commission again directed itself to this question in *El Paso Natural Gas Co.*, 13 FPC 421. It acknowledged that the intervening *Phillips* decision by the Supreme Court [1] required a re-examination of all aspects of producer regulation. However, it noted that production by pipelines would be treated on a par with production by independent producers, and it granted El Paso a fair field price for the gas it produced.

The question of compensation of pipeline production activities was not again raised until May 1957 in *Olin Gas Transmission Corp.*, 17 FPC 695, when the Commission allocated a price for Olin's gas in excess of cost. It concluded: "On consideration of all the factors, on the basis of the record in this case, we conclude that the increased rates proposed by Olin will, while remaining within the bounds of reasonableness, serve the desirable and proper purpose of affording Olin the incentive and, at least to a degree, the means for undertaking the exploration and development which are required in the interest of Olin's customers, to meet their need for continued supplies of natural gas at reasonable rates." [17 FPC at 701]

The question was next before the Commission in June 1958 in *Colorado Interstate Gas Co.*, 19 FPC 1012. There the Commission agreed with the presiding examiner that Colorado Interstate had not introduced sufficient evidence to justify a fair field price for the gas it produced. However, it established a rate of return of 6 percent which equalled 12.85 percent on the Company's common equity. In so doing, the Commission recognized that this was a generous margin over the "bare bones" cost of money and that it was comparable to the rates of return granted independent producers.

In August 1959 the matter was again raised in *El Paso Natural Gas Co.*, 22 FPC 260, where the Commission again granted an additional incentive to engage in gas production activities. The formula adopted by the Commission was to allow the company to retain the statutory tax incentives granted gas producers. The effect, as the Commission noted, was to allow a rate of return of 8.61 percent on production properties, as compared to the over-all rate of return of 6.35 percent.[2]

In the July 1960 interim order of the instant case the Commission reserved for future determination the question of compensating Southern's production activities but expressly reaffirmed its policy: "The Commission has heretofore expressed its opinion as to the desirability of encouraging pipeline companies in the development of their own natural gas production, and perhaps Southern in this proceeding is entitled to a greater return on its production properties than on its pipeline properties." *Southern Natural Gas Co.*, 24 FPC 26, 31 (1960).

The final opinion in this series came in April 1961 in *Panhandle Eastern Pipeline Co.*, 25 FPC 787. In this case the Commission agreed with the presiding examiner that Panhandle had not shown that it should be allowed the commodity price or fair field price over and above its cost of service for the gas

---

[1] 347 U.S. 672.

[2] *Accord, United Fuel Gas Co.*, 23 FPC 127 (1960); (restating the *El Paso* approach).

it produced. However, in light of the evidence of Panhandle's financial needs for exploration and development and as an incentive to engage in such activities, the Commission granted a rate of return of 6 percent on well-mouth properties, as compared to 5.75 percent on its other investments.

Thus, from January 1954 until the recent *El Paso* opinion and this opinion, the Commission has consistently granted an incentive or additional compensation for pipeline production. The variances in the above cited cases came in the approach to the issue, in formulating a theory for measuring the incentive. In every instance some additional return was granted.

JUDICIAL REVIEW. Three of the above cases were reviewed by the courts. The Panhandle decision granting a fair field price for gas produced by Panhandle was remanded to the Commission on appeal in *City of Detroit, Michigan*, v. *F.P.C.*, 230 F. 2d 810 (D.C. Cir. 1955), on the grounds that the record as presented did not support the fair field price and that a cost-of-service price should at least have been used as a comparison. However, the Court expressly noted that the Commission could consider the need for encouraging exploration and development of gas resources by a pipeline company in fixing its rates.

The decision granting El Paso additional compensation on its production activities by means of allowing it to retain the statutory tax incentives resulting therefrom was also appealed. There the Court of Appeals for the Fifth Circuit held that the Commission had adopted an improper formula in determining the compensation for El Paso's production. However, it stated: "El Paso contends, the Commission recognizes, and the State of California and other intervenors do not dispute, that in the ordinary circumstances the producer is entitled to a rate that permits him to recover his costs and a reasonable return on his investment, which return must include an increment of incentive for exploration and development and compensation for the wasting asset. Here, however, the parties differ widely on what, on the record before us, El Paso is entitled to as representing this increment." The Court concluded: "It is the duty of the Commission to fix a rate that represents the cost of service and a reasonable return on the investment, including compensation for consumption of the gas and an increment for incentive, instead of merely *treating* the tax savings as the amount necessary to provide for return and incentive." *El Paso Natural Gas Co.* v. *F.P.C.*, 281 F. 2d 567, 570, 573 (5th Cir., 1960).[3]

The Commission's decision in *Panhandle Eastern* to grant an extra rate of return for production activities also was subjected to review in *Panhadle Eastern Pipe Line Co.* v. *F.P.C.*, 305 F. 2d 763 (D.C. Cir., 1962). The court affirmed the Commission, holding that it was not error for the Commission to grant Panhandle additional return on its production properties and to refuse to allow a field price.

It appears, therefore, that in two instances on review the Courts have disagreed with the Commission's formula for determining the proper additional compensation for pipeline production. However, in *every instance* the Courts have not disputed but have expressly affirmed the Commission's power to grant such additional compensation.

INDUSTRY DEVELOPMENT. During this period several large pipeline companies substantially expanded their exploration and development activities.[4] The re-

---

[3] *Accord, City of Lexington* v. *F. P. C.*, 295 F. 2d 109 (4th Cir. 1961) (*United Fuel Gas Co.* case).

[4] The following figures, taken from the annual reports to the Commission, represent amounts of exploration and development expenditures which were charged off each year as expenses. While they do not include the amounts (often greater) of exploration and development expenditures which were capitalized, these figures do accurately reflect the companies' exploration and development activities. The figures have been rounded off to the nearest $100,000.

ported expenditures of Southern Natural Gas Co. from 1951 through 1954 never exceeded $400,000. Thereafter its reports show expenditures of $1,500,000 (1955), $2,400,000 (1956), $2,000,000 (1957), $3,400,000 (1958), $2,300,000 (1959), $2,900,000 (1960) and $1,100,000 (1961). Tennessee Gas Transmission Company has a similar history. Prior to 1955 its only exploration and development activities were conducted through a partially-owned subsidiary, Tennessee Production Company which did not engage in substantial exploration efforts.[5] However, it reported expenditures of its own thereafter of $1,300,000 (1955), $2,700,000 (1956), $3,800,000 (1957), $3,200,000 (1958), $4,600,000 (1959), $7,200,000 (1960) and $1,000,000 (1961). Prior to 1954 El Paso Natural Gas Company did not report expenditures over $2,000,000. Thereafter, however, its expenditures were $3,200,000 (1954), $4,900,000 (1955), $6,600,000 (1956), $8,000,000 (1957), $6,800,000 (1958), $7,400,000 (1959), $11,400,000 (1960) and $7,500,000 (1961). From 1951 through 1954 Panhandle Eastern Pipe Line Co. reported expenditures less than $800,000 annually. Thereafter it spent $1,000,000 (1955), $1,000,000 (1956), $1,200,000 (1957), $2,300,000 (1958), $1,800,000 (1959), $1,400,000 (1960) and $1,300,000 (1961).

It cannot be said, of course, that these increases were due solely to the Commission policy which was begun in 1954 and maintained consistently until October 1962. However, there can be little doubt that this policy was a critical factor in the decisions of these companies to substantially expand exploration and development activities.

Viewing in proper context the question of compensating pipeline production, it is seen that from January 1954 until October 1962 the Commission followed a consistent policy of granting additional compensation on these investments, that the courts consistently affirmed the Commission's power to do so, and that at least four large pipeline companies substantially increased their exploration and development in reliance thereon. This, of course, does not in itself prove that Southern Natural should be granted additional return for its production activities, where there has been insufficient record proof that their consumers benefited thereby. What it does prove in unmistakable terms is that in response to an encouraging regulatory policy, pipelines have engaged in large scale exploration and development activities—activities which generally benefit the consumer, which affect thousands of workers, and which involve the expenditure of tens of millions of dollars annually.

It is clear that whatever action the Commission takes will directly affect the decisions of pipeline companies as to further exploration and development. A withdrawal from these activities by the pipelines would substantially reduce the future gas supply of millions of consumers, would displace thousands of workers, and would remove from the economy the tens of millions of dollars now spent annually. I maintain that this matter so critical to the planning of the affected companies and ultimately to the economy of the Nation cannot remain a matter of speculation and gradual evolution through a series of litigated cases, which may or may not produce records conducive to an ultimate complete determination of the question and which may in itself cause a withdrawal. In two of such cases—the *El Paso* opinion and this opinion—the Commission has denied the requested additional return for alleged lack of supporting evidence but has failed to adequately describe the circumstances in which additional return will be granted, thereby casting an ominous shadow on the whole question.

In view of these considerations, I feel that three observations are in order. First, I will make clear my own position on the threshold issue. It is my firm conviction that it can be clearly advantageous to consumers for their pipeline

[5] See 1954 Moody's Industrial Manual 877–78.

supplier to have an independent source of gas in the form of its own production. It is equally clear to me that pipelines have no duty under the Natural Gas Act to conduct exploration and development programs to acquire their own production. Therefore, I believe we should adhere to the policy of granting additional return on pipeline production properties in appropriate cases to encourage the type of exploration and development which confers practical economic benefits upon consumers. Second, I think it important to point out that the majority of the Commission agrees and has positively expressed that additional return will be granted on pipeline production investment in appropriate cases. [Opinion and Order, p. 338; Concurring Statement of Commissioner Ross, pp. 365, 369; Dissenting Statement of Commissioner Woodward, p. 376.] Third, I believe that a more definitive and complete resolution of this problem cannot await a case-by-case determination which may ultimately develop sound policy only at the cost of presently damaging the economy. Rather, it must be resolved immediately on a general basis. I therefore recommend that we initiate a rulemaking proceeding which, after consideration of industry-wide evidence, will explicitly determine the circumstances under which additional return will be granted on production investment.

Because of the above-stated views, I cannot join in the portion of the opinion dealing with the production issue although I concur in the result thereof. Apart from this matter, however, I am in agreement with the opinion and order.

WOODWARD, *Commissioner*, concurring in part and dissenting in part:

The majority Opinion and Order in this case again invokes the formula first adopted in the recent *El Paso* case[1] by declaring, "The criteria applied by us in the *El Paso* case in rejecting the company's proposal for such an additional allowance for incentive govern the disposition of this issue here; and the findings there made with respect to El Paso may be made on the present record with respect to Southern" (P. 337). The majority has incorrectly disposed of the issue of rate of return on production investment to which Southern Natural Gas Company is legally entitled.

The statements and conclusions expressed in my dissenting opinion in the *El Paso* case are equally applicable in the instant proceeding and bear repeating here; such judgment on the part of the majority is erroneous and must again be labeled unsound.

Significantly, although the majority adopt their findings with respect to rate of return on well-mouth properties as expressed in the *El Paso* case, they again fail to consider the concise mandate of the Fifth Circuit Court of Appeals in remanding that case to the Commission:[2] "Upon such remand, the Commission will receive such evidence as may be necessary to enable it to fix a just and reasonable rate to permit a fair return on the well-mouth investment and provide the incentive necessary to attract capital to the exploration and development activities of the Company." This directive compels the conclusion that a separate rate of return must be allowed. In this record, as in the *El Paso* record, there is more than ample evidence to justify such a finding.

Prior to the recent *El Paso* decision, the Commission consistently granted extra compensation for pipeline production. In *Panhandle Eastern Pipeline Company*, 13 FPC 53, the Commission allowed gas produced by Panhandle to be included in its cost of service at a fair field price in lieu of a cost

[1] Commission Opinion No. 366, issued October 19, 1962, 28 FPC 688.
[2] *El Paso Natural Gas Company* v. *F.P.C.*, 281 F. 2d 567 (CA 5).

basis. There the Commission declared, "It is an established fact that this Commission cannot compel natural gas companies subject to its jurisdiction to engage in exploration, drilling and related developmental activities or to acquire and attach gas reserves discovered by others. . . . If there is to be natural gas exploration, development and production by pipeline systems themselves, therefore—with resultant benefits to the public interest—it follows that this must result from regulatory policies designed to encourage, rather than penalize, such activities." 13 FPC 75.

In *Olin Gas Transmission Corporation*, 17 FPC 701, the Commission granted Olin an added incentive stating, *inter alia*, "There was evidence of increased operational flexibility to the company resulting from ownership of its own production as contrasted with purchasing its gas from others, which would redound to the benefit of the consumer."

Further, in *United Gas Pipeline Company* v. *Memphis L., G. and W. Div*, 358 U.S. 103, the Supreme Court emphasized the fact that the Natural Gas Act requires protection for the gas companies as well as the consumers, saying: "It seems plain that Congress, in so drafting the statute, was not only expressing its conviction that the public interest requires the protection of consumers from excessive prices for natural gas, but was also manifesting its concern for the legitimate interest of natural gas companies in whose financial stability the gas consuming public has a vital stake."

As a result of uniform Commission policy which granted additional compensation for pipeline production operations, major pipeline companies greatly expanded their exploration and development activities with resultant benefits to the gas consuming public. Recorded statistical studies vividly reflect this fact. The creation of this vigorous economic stimulus, through useful regulation, infused new life into the natural gas industry and the national economy. Now the Commission has abandoned this policy based on years of reliable precedent by promulgating doctrine which is fundamentally inconsistent with the character of, and the conditions prevailing in, the gas producing industry.

The majority has given narrow consideration to the long-run economic significance of the course which this Commission had previously elected to follow.

Continued abundant gas production is an essential ingredient of a strong economy and the precedent which has been affirmed in this case will bear heavily on the future course of industry growth.

In the instant proceeding, the Commission endeavors to set forth certain "general" conditions or guidelines which must be met by a pipeline company to warrant allowance of an additional return on production property:

(1) Practical dedication of production properties to pipeline service.

(2) The conducting of production operations so that they are or will be of practical economic advantage to the pipeline's customers (P. 337).

Let us consider what weight the Commission attributes to its conditions or guidelines when the granting of additional return is the fact in issue. When El Paso sought to make a formal dedication of its reserves to pipeline service if the Commission would grant an adequate incentive,[3] its forthright offer was summarily rejected because the Commission did not think such dedication would satisfy its "objections".[4] The guidelines or conditions which appear in the majority opinion are vague and indefinite—in effect, they are not guidelines at

[3] Petition of El Paso Gas Co., Docket No. G–4769, *et al.* for rehearing, filed November 9, 1962, p. 9.

[4] Order denying rehearing, Docket No. G–4769, *et al.* issued December 7, 1962, p. 954, 28 FPC 952.

all. We are still at a loss to determine what standards, if any, must be followed to afford an appropriate basis for allowing higher return on production properties before any company in like circumstances can successfully assert such a contention.

As the Fifth Circuit decision, *supra*, explicitly declares, "It has also been recognized not only by Congress but by the courts as well that there is a public interest in the creation of an incentive to cause additional exploration and development in the oil and natural gas industries." Clearly, there is a vital need for the inclusion of an adequate incentive quotient in determining the rate of return on production investment. While our policies must protect the indispensable rights of all consumers, they must, at the same time, assure a healthy industry to serve them. Consumer interests, like those of the gas producing industry, are one and the same when viewed as part of the national interest.

The function of this Commission is to regulate in such a way as to encourage, rather than discourage enterprise while at the same time rendering benefits to the consumer of today and those of the future. It is wholly desirable that regulated companies move forward with investment and imagination in order to insure development consistent with the public interest. Sound stimulation of enterprise is essential; retardation through faulty regulation is precarious.

Exclusive of the matter of the proper rate of return on production properties, I concur with the majority in the foregoing opinion.

[LETTER REJECTING APPLICATION FOR CERTIFICATE]

Pan American Petroleum Corporation
Docket No. CI63–867

FEBRUARY 19, 1963.*

Pan American Petroleum Corporation,
P.O. Box 40, Casper, Wyo.

(Attention: Mr. Harold H. Young, Jr.)

GENTLEMEN: This is with reference to your letter of January 14, 1963, submitting an application for certificate of public convenience and necessity, assigned Docket No. CI63–867, for proposed sales of gas to Colorado Interstate Gas Company from the Beaver Creek Field (Phosphoria Formation), Fremont County, Wyoming.

The sales are proposed to be made pursuant to a contract dated October 4, 1962, attached as an exhibit to your certificate application. The contract incorporates pricing provisions other than those permitted by Section 154.93 of the Commission's Regulations. Therefore, in accordance with Sections 154.93 and 154.100 of the Regulations, your certificate application and exhibits thereto are hereby rejected. All available copies are returned herewith.

This rejection is without prejudice to the resubmittal of an original and seven copies of your application and exhibits thereto which do not contain the unacceptable pricing provisions.

Very truly yours,

J. H. GUTRIDE,
Secretary.

---

*Rehearing denied by order issued March 7, 1963, 29 FPC 431. Set aside, 317 F. 2d (CA10–1963); reversed *sub nom F.P.C.* v. *Texaco, Inc.*, 377 U.S. 33 (1964).

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

THE WASHINGTON WATER POWER COMPANY, PROJECT NO. 2075

ORDER APPROVING REVISED PROJECT EXHIBIT AND ADJUSTING ANNUAL CHARGES

(Issued February 19, 1963)

Application was filed December 4, 1962 by The Washington Water Power Company, licensee for major Project No. 2075, now under construction on Clark Fork in Sanders County, Montana, and affecting lands of the United States within the Kaniksu and Lolo National Forests and other lands of the United States.

The application seeks Commission approval to exclude from the projects Lots 5 and 8 (embracing 74.93 acres of lands of the United States) in Section 29, T. 26 N., R. 32 W., M.P.M. The lots, which are shown as presently within the project on Exhibit K, Sheet 1A (FPC No. 2075–90), now part of the license, were used by the licensee for gravel source during construction of the project and are not now necessary for project operation. The licensee has authorized Commission staff to revise the Exhibit K sheet so as to eliminate the lots therefrom, and the revision was made on December 4, 1962.

The exclusion of the lots from the project will result in a decrease of $149.86 in the annual land charges now fixed in the license.

By letter dated February 13, 1958, the Forest Service concurred in the elimination of the lots from the project.

The Commission finds:

(1) Exhibit K, Sheet 1A (FPC No. 2075–90), revised by Commission staff on December 4, 1962, conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

(2) The decreased annual charges for recompensing the United States for the use, occupancy and enjoyment of its lands by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The revised Exhibit K sheet described in finding (1) above is hereby approved as part of the license for the project.

(B) Subparagraph (ii) of Article 36 of the license for Project No. 2075 is hereby revised, effective as of December 4, 1962, by substituting the figure ($2,714.86) for the figure ($2,864.72) appearing therein.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. CP63-139

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 20, 1963)

On November 21, 1962, Columbia Gulf Transmission Company (Applicant) filed in Docket No. CP63-139 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963 and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased by United Fuel Gas Company (United Fuel) from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in connecting to its pipeline system new supplies of natural gas which will be purchased by United Fuel in various producing areas generally co-extensive with Applicant's system.

The total cost of the proposed facilities will not exceed a maximum of $500,000, and no single project will exceed a cost of $125,000. The proposed facilities will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 14, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Columbia Gulf Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of November 5, 1958, in Docket No. G-15524 (20 FPC 681).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applican't compliance with all applicable Commission Regulations under the Natural Gas Act

and particularly the general terms and conditions set forth in paragraphs (a) and (e) of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $500,000, with no single project to exceed a cost of $125,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Columbia Gulf Transmission Company to construct during the calendar year 1963 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to United Fuel Gas Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $500,000, with no single project to exceed a cost of $125,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

REVISION OF ANNUAL REPORT FORM PRESCRIBED FOR ALL LICENSEES OF PRIVATELY OWNED MAJOR PROJECTS (UTILITY AND INDUSTRIAL) SUBJECT TO THE FEDERAL POWER ACT, F.P.C. FORM NO. 9, DOCKET NO. R-212

ORDER NO. 252-A

ORDER REVISING SCHEDULE PAGES OF ANNUAL REPORT FORM, F.P.C. FORM NO. 9, FOR LICENSEES OF PRIVATELY OWNED MAJOR PROJECTS (UTILITY AND INDUSTRIAL)

(Issued February 20, 1963)*

On August 7, 1962, the Commission by Order No. 252 (28 FPC 298) (27 F.R. 8030-8031, August 11, 1962) prescribed a new Annual Report Form, FPC Form No. 9, for Licensees of privately-owned projects under Commission license (major). Subsequent to the issuance of Order No. 252 examination of the Schedule Pages of the Report Form promulgated therein revealed the need for certain minor corrections. Additionally, several printing errors appear in copies of the Report Form as distributed to Licensees following the issuance of Order No. 252. The necessary corrections are as set forth hereinafter.

The Commission does not contemplate the redistribution of corrected copies of FPC Form No. 9 to those Licensees who now have copies of the Report Form for use in reporting 1962 data since all of the corrections here proposed are minor in nature and susceptible to correction through typed or handscript changes on the Report Forms heretofore distributed. Licensees who have received the uncorrected forms are requested to make such corrections. Licensees who have not received copies of FPC Form No. 9 for use in reporting 1962 data will be furnished corrected copies.

The Commission finds:

(1) It is necessary and appropriate for the purposes of the Federal Power Act that the Schedule Pages of FPC Form No. 9 as set forth in Appendix A to Order No. 252 be corrected to read as set forth hereinafter.

(2) Good cause exists for adoption and promulgation of the matters referred to above effective as of the issuance date of this order.

(3) The corrections herein adopted and approved are for purposes of clarification and editorial revision. Notice and opportunity for comment thereon pursuant to section 4(a) of the Administrative Procedure Act prior to the adoption and promulgation thereof is unnecessary.

The Commission, acting pursuant to the Federal Power Act, as amended, particularly sections 3(13), 4 (a), (b), (c), 301(a), 302, 304, 309, and 311 thereof (16 U.S.C. 796(13), 797 (a), (b), (c), 825(a), 825a, 825c, 825h, and 825j), *orders:*

(A) The following corrections to the Schedule Pages of FPC Form No. 9 prescribed for Licensees of privately-owned major projects (utility and industrial) subject to the provisions of the Federal Power Act as set forth in Appendix A to Order No. 252 are hereby adopted and promulgated:

Page 1—column (a), item 4(e), change "Licensee's copy of licensee for project:" to "Licensee's copy of license for project:"; after item 4(f), add item "5. State or States in which project is located."

Page 11—column (c), eliminate the dollar sign and the cents sign.

*Published in the Federal Register on March 2, 1963 (28 F.R. 2029).

Page 17—eliminate second sentence of the requirements for verification.

(B) This order shall be effective upon the date of issuance thereof.

(C) The Secretary of the Commission shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

APPALACHIAN POWER COMPANY, DOCKET NO. E-6900

ORDER MODIFYING OPINION AND ORDER AND DENYING APPLICATION FOR REHEARING AND REQUEST FOR STAY

(Issued February 21, 1963)

On January 23, 1963 Appalachian Power Company (Appalachian) filed an application for rehearing and an application for a stay of our Opinion and Order No. 375 issued December 31, 1962, 28 FPC 1199. In its application for stay, Appalachian requests a stay of our order pending disposition of Appalachian's application for rehearing, or a petition for judicial review Appalachian says it will file in the event rehearing is denied.

Among other things, our Order of December 31, 1962 found (1) that Appalachian practiced deferred tax accounting but did not observe accounting and reporting requirements of this Commission as described by the Accounts prescribed by Commission Order No. 204, issued May 29, 1958, 19 FPC 837; (2) that Order No. 204 made the use of the Accounts it prescribed mandatory for all public utilities and licensees that practice the accounting methods as described in the text of those Accounts; (3) that application and implementation of those Accounts required Appalachian to install and maintain those Accounts as an integral part of the basic accounts by means of which its basic financial condition is determined and must be reported; and (4) that Appalachian consistently and properly must observe those Accounts whenever it presents financial data properly classifiable in those Accounts, in its reports to this Commission or to the general public, including Appalachian's security holders.

Our Order of December 31, 1962 further specified the manner in which all amounts properly classifiable in those Accounts should be reclassified in Appalachian's basic books of account; and it directed Appalachian to make such reclassification within 30 days.

Except for modifications made below, in the nature of errata, all material points raised in Appalachian's application for rehearing have already been discussed in the opinion and there is no need to repeat what we have already said there.[1] We accordingly find that no useful purpose would be served by granting the stay requested.

At pages 49 and 50 of its application for rehearing, Appalachian points out that the reclassifications directed by finding paragraphs (10) and (11) of our Order would unbalance Appalachian's accounts, insofar as those paragraphs require Appalachian to debit accounts it maintains for state purposes (Account 271.1 and Account 271.2), and to credit accounts prescribed by this Commission. The paragraphs in question should have directed that the debit entries be made

---

[1] Appalachian suggests that enactment of the investment tax credit provisions of the Revenue Act of 1962 and the pendency before the Commission and courts of other questions relating to our treatment of tax deductions, requires a stay and reconsideration of our decision here. We find this suggestion without merit. Those matters have nothing to do with the issues of this case.

to Account 271, and we shall so provide below. We shall also order below that the sixth line on mimeo page 9 of our Opinion be deleted; and that the word "stockholders" be substituted for the word "suppliers" in line 14 of the third paragraph on mimeo page 11 of our Opinion.

The Commission further finds:

(1) Appalachian's application for rehearing filed herein sets forth no new facts or principles of law which were not fully considered by the Commission when it issued its Opinion and Order No. 375, or which, having now been considered, warrant any change in, modification of, or rehearing of such Opinion and Order, except as specified below.

(2) There is no justification for, and the public interest would not be served by, granting a stay of Opinion and Order No. 375.

The Commission orders:

(A) Appalachian's application for rehearing filed in the above entitled proceeding is hereby denied, except as specified below.

(B) The entire sixth line on mimeo page 9 of Opinion No. 375 is hereby deleted.

(C) The word "stockholders" is hereby substituted for the word "suppliers" on line 14 of the third paragraph of mimeo page 11 of Opinion No. 375.

(D) The words "Account 271 Earned Surplus" are hereby substituted for the words "Account 271.1 Earned Surplus—Restricted for Future Federal Taxes on Income" that appear on lines 3 and 4 of finding paragraph (10) on page 54 of Opinion No. 375; and for the words "said 'Account 271.1'" that appear on line 8 of said paragraph (10).

(E) The words "Account 271 Earned Surplus" are hereby substituted for the words "Account 271.2 Earned Surplus—Restricted For Future Federal Taxes on Income" that appear on lines 3 and 4 of finding paragraph (11) on page 54 of Opinion No. 375; and for the words "said 'Account 271.2'" that appear on line 8 of said paragraph (11).

(F) Appalachian's application for stay of Opinion and Order No. 375 is denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

THE ATLANTIC REFINING COMPANY, DOCKET NO. CI63-576

ORDER GRANTING APPLICATION FOR REHEARING

(Issued February 21, 1963)

On January 25, 1963, The Atlantic Refining Company (Atlantic) filed both an application for rehearing of the Commission's letter order of December 27, 1962, which rejected Atlantic's October 20, 1962, application for a certificate of public convenience and necessity and its related gas purchase contract because the contract contains pricing provisions other than those permitted by Section 154.93, as amended, of the Commission's Regulations under the Natural Gas Act (Act), and a petition pursuant to Section 1.7 of the Commission's Rules of Practice and Procedure for waiver of the requirements of Section 154.93 in order to permit the filing and acceptance of its certificate application and the companion rate schedule.

As Atlantic recognizes, the so-called "*Memphis* type" escalation clause in its contract clearly is prohibited by section 154.93. But we agree that the propriety of such a provision, which is not typically found in contracts between independ-

ent producer and pipelines, was not a matter which engaged the Commission's consideration at the time it adopted its present rule. Moreover it is clear that at least some of the objections which we have had with indefinite escalations are not here presented. The issue, of course, is a general one: Atlantic does not suggest that there are any special circumstances presented by its sale to Montana-Dakota which would warrant waiver here. While we are not presently in a position to make any final determination of the matter we believe that the questions discussed in Atlantic's present petition are sufficiently meritorious to warrant our further study. We shall therefore grant Atlantic's petition for rehearing in order to preserve its rights while we are considering whether or not section 154.93 of the Commission's regulations under the Natural Gas Act should be amended or modified to permit contract provisions like or similar to those incorporated in the Atlantic contract with Montana-Dakota.

Accordingly, the Commission orders:

The application for rehearing filed on January 25, 1963, by The Atlantic Refining Company is hereby granted for the purposes hereinbefore set forth.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. G–17774

ORDER DENYING APPLICATION FOR REHEARING AND RECONSIDERATION AND REJECTING OFFER OF SETTLEMENT

(Issued February 21, 1963)

On January 25, 1963, Lynchburg Gas Company (Lynchburg or Applicant), an intervenor in the above-entitled proceeding, filed an application for rehearing and reconsideration of our Opinion and Order No. 373 issued December 28, 1962, 28 FPC 1145 requesting that we vacate said opinion and enter a revised opinion and order either denying a certificate of public convenience and necessity or remanding the proceeding for further hearing before the examiner. In the alternative, Applicant proposes an offer of settlement which will be discussed below.

In our opinion and order we granted a permanent certificate of public convenience and necessity under Section 7(c) of the Natural Gas Act to Atlantic Seaboard Corporation (Atlantic) authorizing it to acquire, construct and operate facilities required to activate an underground natural gas storage reservoir designated as Terra Alta Storage Pool X–76 (Terra Alta) in Portland and Union Districts, Preston County, West Virginia.

Lynchburg seeks rehearing on two grounds:

1. Terra Alta, as presently constituted, is not required by the public convenience and necessity. Neither the examiner nor the Commission made adequate findings on the public need to be served.

2. Applicant was denied a fair hearing.

Lynchburg argues that the Commission has failed completely to define how the Terra Alta project would be in the public interest or how it is required by the public convenience and necessity. As we pointed out in opinion 373 and accompanying order, Atlantic's application completely satisfied the standards properly to be considered in determining public convenience and necessity as contained in the Natural Gas Act and as applied in Commission and judicial decisions.

In passing upon the proposed certificate authorization we have considered not just the present but the future public convenience and necessity as well. We

found, based upon the increase in the purchased gas load factor attributable to the operation of Terra Alta, that substantial savings would be reflected in Atlantic's cost of service. The only unresolved question on this point is: When will these savings realized by Atlantic be reflected in tangible consumer benefits? The present lack of sufficient operational experience to resolve the timing of such savings does not supply a sound reason for denying a certificate of public convenience and necessity nor does it lessen the need for the proposed facilities.

As our order provides in detail, when Terra Alta achieves its maximum capability,[1] the Commission, in appropriate proceedings, having an adequate record before it, will then determine the just and reasonable rate for the service projected in this record.

Applicant's contention that it was denied a fair hearing is essentially the same as that raised in its exceptions to the examiner's decision. The Examiner could have received briefs but since Lynchburg has had ample opportunity to present its position, arguments and contentions, and to meet the opposing evidence and argument during the course of the proceeding, we re-affirm our finding that the Examiner's failure to comply fully with our Rules and Regulations did not constitute prejudicial error nor warrant sending the case back for further hearing.

In its settlement proposal, Lynchburg would withdraw its opposition to the Terra Alta project if Atlantic would make available, on reasonable terms, a storage service to its customers. This offer is not timely and goes beyond the scope of the record in the proceeding. The record shows that Atlantic's storage operations are predicated on meeting the requirements of all existing wholesale customers and the service proposed by Lynchburg at this time is neither consistent with Atlantic's operations or the physical design of its pipeline system. In this matter, Atlantic has not requested authority to provide a storage or peaking service; to compel it to do so at the instance of the Applicant would confer validity to a premise which is contrary to our findings and order contained in opinion 373. The offer of settlement must be rejected.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing and reconsideration filed herein present no new facts or principles of law which were not considered by the Commission when it issued its Opinion 373 on December 28, 1962, or which having now been considered warrant any change or modification of said opinion and order.

The Commission orders:

The application for rehearing and reconsideration filed by Lynchburg Gas Company is hereby denied and its offer of settlement is hereby rejected.

Commissioner Morgan *dissenting.*

Commissioner Ross *dissenting*, would remand the matter to the Examiner to permit the filing of briefs.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

BLACK HILLS POWER & LIGHT COMPANY, DOCKET NO. E-7046

ORDER GRANTING REHEARING AND PRESCRIBING PROCEDURE

(Issued February 21, 1963)

Application was filed on January 24, 1963, by Black Hills Power & Light Company (Applicant) for rehearing on the Commission's order issued December

[1] Estimated to be in 1965–66.

27, 1962, 28 FPC 1121, denying Applicant's request for authority pursuant to Section 204 of the Federal Power Act for the issuance of 10,000 shares of Common Stock pursuant to Applicant's Restricted Stock Option Plan. In this application Applicant states that if it is permitted to do so, it is prepared to show at a hearing that its proposed Restricted Stock Option Plan meets the criteria of Section 204 of the Federal Power Act, as discussed in the order of December 27, 1962. And the rehearing application specified in some detail the nature of the proposed case the Applicant intends to make. We believe that this expanded showing by the Applicant is sufficient to warrant the holding of a formal hearing at which both the Applicant and the Commission's staff can introduce comprehensive evidence upon the basis of which a determination of the propriety of the proposed stock offering may be determined.

The Commission finds:

It will not be inconsistent with the public interest to grant the application for rehearing and to designate Applicant's request for authority pursuant to Section 204 of the Federal Power Act for formal hearing as hereinafter provided.

The Commission orders:

(A) Applicant's petition for rehearing is hereby granted and its request for authority to issue 10,000 shares of Common Stock pursuant to Applicant's Restricted Stock Option Plan is hereby designated for hearing.

(B) The hearing shall be held on June 3, 1963, at 10 a.m. (EDT) in a Hearing Room of the Federal Power Commission, 441 G Street NW., Washington, D.C., and the following procedure is prescribed:

(1) The Applicant shall by April 15, 1963, file with the Commission's Secretary an original and ten copies of all of its testimony (including qualifications of witnesses and exhibits).

(2) The Commission staff shall by May 15, 1963, serve three copies of its testimony (including qualifications of witnesses and exhibits) upon the Applicant.

(3) All of the testimony except exhibits, shall be in question and answer form.

(4) No exhibits (except those of which official notice may properly be taken) shall contain narrative material other than brief explanatory notes.

(5) All exhibits (except those of which official notice may properly be taken) shall contain brief and appropriate titles, and the exhibits shall be fully explained in the prepared testimony by the witness or witnesses sponsoring them.

(6) Each witness shall execute an affidavit adopting the testimony for which he assumes responsibility and an original and two conformed copies of such affidavits shall be filed with his prepared testimony.

(7) Any party submitting more than one exhibit shall enclose a cover sheet listing the title of each exhibit in the sequence they wish them to be marked for identification.

(8) Any motions to strike any part of the prepared testimony and exhibits (prior to cross-examination), shall be filed with the Presiding Examiner or Chief Examiner by May 22, 1963; answers thereto shall be filed by May 29, 1963; and rulings on such motions will be made by the Examiner at the time such testimony or exhibits are offered in accordance with subparagraph (9).

(9) Upon the commencement of the hearing and after appearances, opening statements, and other preliminary matters, the exhibits previously filed, as provided above, will be marked for identification in the sequence directed by the Presiding Examiner; and thereafter the Examiner will require that the affidavits of the respective witnesses and their prepared testimony (together with the qualifications of the respective witnesses) previously filed, as provided above,

be copied into the record as though read, excepting any part or parts of the prepared testimony with respect to which he may have granted motion to strike.

(10) The Presiding Examiner will specify the order of cross-examination for the information of the parties in making their respective witnesses available for cross-examination.

(C) Requests for extension of time concerning the time for any filings specified herein shall be made in writing, served on all parties and filed with the Presiding Examiner or the Chief Examiner (together with a certificate of service) at least ten days in advance of the dates specified herein (or as may have been extended), and any answers thereto shall be filed with the Presiding Examiner within three days after the request for extension.

(D) The Commission's Rules of Practice and Procedure shall apply in this proceeding except to the extent that they are modified or supplemented herein or to the extent that they are further modified or supplemented by the Examiner with the consent of the parties.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MIDLAND PETROCHEMICAL COMPANY, DOCKET NOS. G–20265, G–20266, G–20267, AND G–20268

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF SERVICE, TERMINATING CERTIFICATES, DISMISSING APPLICATIONS, AND ACCEPTING SUPPLEMENTS TO FPC GAS RATE SCHEDULES FOR FILING

(Issued February 21, 1963)

On June 22, 1962, Midland Petrochemical Company (Applicant) filed in Docket Nos. G–20265, G–20266, G–20267, and G–20268 applications pursuant to Section 7(b) of the Natural Gas Act for permission and approval of the Commission to abandon natural gas service as hereinafter described, all as more fully described in the applications in the above-entitled proceedings and in Appendix I hereto.

The abandonment applications herein were filed as amendments to the applications for certificates of public convenience and necessity in the subject dockets which applications requested authorization to continue certain sales of natural gas originally made by Hope Producing Company (Hope) to whose interests Applicant has succeeded. On December 18, 1959, Applicant was granted temporary certificates to continue the sales herein proposed to be abandoned.

In each case the volume of gas has become depleted to the point where it is no longer economically feasible to continue the operation, and Applicant has therefore filed notices of cancellation of its related rate schedules.

Applicant had previously filed certain supplements to complete its rate schedules related to the sales herein proposed to be abandoned. These have not been accepted for filing and therefore will now be accepted and designated as indicated in Appendix II hereto.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 14, 1963, respecting the matters involved in and the issues presented

by the abandonment applications herein. No petition to intervene or protest to the granting of the applications has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas proposed to be abandoned by Applicant, as hereinbefore described and as more fully described in the abandonment application herein and in Appendix I hereto, are subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The abandonments hereinbefore described are permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(4) The temporary certificates heretofore issued to Applicant in the subject dockets should be terminated, and the certificate portions of such applications should be dismissed as moot.

(5) The notices of cancellation of Applicant's related rate schedules should be accepted for filing to become effective on the date on which this order issues and designated as indicated in Appendix I hereto.

(6) The supplements to Applicant's related rate schedules not previously accepted for filing should be accepted and designated as indicated in Appendix II hereto.

(7) The certificates issued to Hope Producing Company for the service which Applicant proposed to continue in the subject dockets should be terminated.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Permission for and approval of the abandonment of service by Applicant, as hereinbefore described and as more fully described in the abandonment applications herein and in Appendix I hereto, are hereby granted.

(B) The temporary certificates heretofore issued in the subject dockets are hereby terminated, and the certificate portions of such applications are dismissed as moot.

(C) The certificates heretofore issued to Hope Producing Company in Docket Nos. G–4802, G–5166, G–5167, and G–5168 for the service which Applicant proposed to continue in the subject dockets are hereby terminated.

(D) The notices of cancellation of Applicant's related rate schedules are accepted for filing to become effective on the date on which this order issues and are designated as indicated in Appendix I hereto.

(E) The supplements to Applicant's related rate schedules not previously accepted for filing are hereby accepted and are designated as indicated in Appendix II hereto.

CITY OF MONROE CITY, MISSOURI, DOCKET NO. CP63-90; CITY OF PERRY, MISSOURI, DOCKET NO. CP63-91

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALES OF NATURAL GAS

(Issued February 21, 1963)

On October 9, 1962, as supplemented on November 5, 1962, the City of Monroe City, Missouri (Monroe) filed in Docket No. CP63-90 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Panhandle) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Monroe for resale and distribution in Monroe, all as more fully set forth in the application, as supplemented.

Monroe, located 25 miles north of Panhandle's main transmission line in Missouri, states that it proposes to construct and operate a transmission pipeline from the proposed connection with Panhandle's pipeline to the city gate. Monroe

will transport its own natural gas requirements as well as those of the City of Perry, Missouri, located 10 miles north of Panhandle's pipeline. Monroe will also construct and operate a distribution system within its borders.

Monroe's estimated third year peak day and annual requirements are shown to be 1,983 Mcf and 274,374 Mcf, respectively.

The total cost of Monroe's facilities is estimated to be $750,000, which cost will be financed by the issuance of gas revenue bonds.

On October 9, 1962, as supplemented on December 20, 1962, the City of Perry, Missouri (Perry) filed in Docket No. CP63–91 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle to sell natural gas to Perry for resale and distribution in said city, all as more fully set forth in the application, as supplemented.

Perry will construct and operate a transmission pipeline from its city gate to a connection with the pipeline which Monroe proposes to construct as set forth in the latter's application in Docket No. CP63–90. Monroe will receive Perry's natural gas from Panhandle at the connection proposed in Docket No. CP63–90 and transport and deliver such gas to Perry at the interconnection of Perry's and Monroe's proposed pipelines. Perry will also construct and operate a distribution system within its borders.

Perry's estimated third year peak day and annual requirements are shown to be 722 Mcf and 58,556 Mcf, respectively.

The total cost of Perry's facilities is estimated to be $215,000, which cost will be financed by the issuance of gas revenue bonds.

On November 15, 1962, Panhandle filed its answer to the subject applications stating that it has no objection to rendering the requested service.

Due notice of the filing of the applications and opportunity for hearing thereon has been given by publication in the Federal Register on January 18, 1963, (28 FR 501). No protest or petition to intervene has been filed in these proceedings.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) Applicant, City of Monroe, Missouri, is a municipal corporation incorporated under the laws of the State of Missouri and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in the City of Monroe.

(3) Applicant, City of Perry, Missouri, is a municipal corporation incorporated under the laws of the State of Missouri and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in the City of Perry.

(4) It is necessary and desirable in the public interest that Panhandle be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Monroe and to sell and deliver up to 1,983 Mcf of natural gas per day to Monroe and to sell up to 722 Mcf of natural gas per day to Perry and to deliver Perry's gas to Monroe for transportation and delivery by the latter to Perry, as set forth in the applications, as supplemented, in Docket Nos. CP63–90 and CP63–91, and as hereinafter ordered and conditioned.

(5) Monroe and Perry should be prepared to receive natural gas from Panhandle within one year from the date of issuance of this order.

(6) The requirement that Panhandle serve Monroe and Perry, as proposed, will not place any undue burden upon Panhandle nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Monroe and to sell and deliver up to 1,983 Mcf of natural gas per day to Monroe and to sell up to 722 Mcf of natural gas per day to Perry and to deliver Perry's gas to Monroe for transportation and delivery by the latter to Perry, all as hereinbefore described and as more fully set forth in the applications, as supplemented, in Docket Nos. CP63–90 and CP63–91.

(B) Monroe and Perry shall be prepared to receive natural gas from Panhandle within one year from the date of issuance of this order.

(C) Panhandle shall report to the Commission in writing the date of commencement of service to Monroe and Perry within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TRUNKLINE GAS COMPANY, DOCKET NO. CP63–165

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 21, 1963)

On December 10, 1962, Trunkline Gas Company (Applicant) filed in Docket No. CP63–165 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $2,500,000, and no single project will exceed a cost of $500,000. The proposed facilities will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 14, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G–882 (8 FPC 850).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedures herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedures.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Trunkline Gas Company to construct during the calendar year 1963 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Trunkline Gas Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulation.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of

the gas sales contracts and the docket numbers of the related producers certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $2,500,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63-69

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 25, 1963)

On September 19, 1962, Cities Service Gas Company (Applicant) filed in Docket No. CP63-69 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas to The Gas Service Company (Gas Service) for resale and distribution in the Cities of Nortonville and Winchester, Kansas, and environs, all as more fully set forth in the application on file with the Commission.

Applicant proposes to tap its existing 8-inch pipeline and construct and operate a meter setting with appurtenant regulator equipment in Jefferson County, Kansas, in order to sell natural gas to Gas Service for resale and distribution in the two cities.

The estimated third year peak day and annual natural gas requirements for Nortonville are 420 Mcf and 36,750 Mcf, respectively, and for Winchester are 250 Mcf and 21,875 Mcf, respectively.

The estimated cost of the proposed facilities is $4,180, which cost will be financed from treasury cash.

Applicant states that the proposed sales will be made under Applicant's FPC Gas Rate Schedules F-2, C-2 and I-2.

The application shows that Gas Service has received appropriate authorization from the Kansas State Corporation Commission and has received franchises from the two cities to construct and operate distribution systems therein.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 12, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas" company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298. (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Com-

mission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63-83

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 25, 1963)

On October 4, 1962, Cities Service Gas Company (Applicant) filed in Docket No. CP63-83 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963 and the operation of branch lines and meter and regulator equipment to make temporary and permanent direct sales of natural gas from Applicant's existing pipeline system, all as more fully set forth in the application.

The purpose of this "budget-type" application is to enable Applicant to act with reasonable dispatch in establishing new delivery points for certain direct

sales of natural gas without the delay incident to the filing and processing of individual certificate applications.

Applicant estimates that it will have approximately 10 requests for temporary sales in 1963, mostly from road construction contractors, each request involving an estimated average of 40,000 Mcf of natural gas annually, and averaging a cost of approximately $3,500 per installation. Also, Applicant anticipates approximately 30 requests for direct sales to consumers on a permanent basis during 1963, each request involving an average of approximately 85,000 Mcf of natural gas annually, and averaging a cost of approximately $3,000 per installation.

The total cost of the proposed facilities will not exceed a maximum of $125,000 and no single project will exceed a cost of $20,000. The proposed facilities will be financed from treasury cash.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 13, 1963, concerning the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and delivery of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations thereunder.

(4) The construction and operation of facilities to deliver natural gas as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization hereinafter granted a statement showing by project: (a) actual final costs, (b) description, (c) location of facilities, (d) name and location of each customer, (e) expected date of termination of service to temporary customers, and (f) estimated annual revenues and annual deliveries to each customer.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $125,000, with no single project to exceed a cost of $20,000.

(8) Deliveries under the authorization hereinafter granted shall be limited to no more than 10 customers on a temporary basis and to no more than 30 customers on a permanent basis; and further, total annual deliveries to all customers under the authorization hereinafter granted shall be limited to a maximum of 2,950,000 Mcf of gas.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct and operate facilities and to deliver natural gas to direct industrial customers as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit within 60 days after the expiration of the authorization hereinafter granted a statement showing by project: (a) actual final costs, (b) description, (c) location of facilities, (d) name and location of each customer, (e) expected date of termination of service to temporary customers, and (f) estimated annual revenues and annual deliveries to each customer.

(D) The certificate issued by paragraph (A) above is limited to construction during the calendar year 1963, and the total expenditures for facilities authorized to be constructed are limited to a maximum of $125,000, with no single project to exceed a cost of $20,000.

(E) Deliveries under the certificate hereinbefore granted are limited to no more than 10 customers on a temporary basis and to no more than 30 customers on a permanent basis; and further, total annual deliveries to all customers under the authorization hereinbefore granted shall be limited to a maximum of 2,950,000 Mcf of gas.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

R. H. GOODRICH, ET AL., DOCKET NO. G-8977, ET AL.

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT PROPOSALS, SEVERING AND TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued February 25, 1963)

There is now before us for consideration Settlement Proposals filed on December 5, 1962, by R. H. Goodrich (Goodrich) in Docket No. G-8977, *et al.*, and on November 28, 1962, by W. H. Cocke (Cocke) in Docket No. G-8978, *et al.* The settlement proposals involve suspension proceedings concerning proposed increased rates filed by Goodrich and Cocke for the sale of natural gas to United Gas Pipe Line Company in the Duck Lake Field, St. Martin and St. Mary Parishes in Southern Louisiana.

These proceedings were consolidated with the proceedings in *Cities Service Company, et al.*, (Cities) Docket No. G-8921, *et al.*, by order issued February 29,

1956.[1] On December 26, 1962, 28 FPC 1108, we issued an order in such consolidated proceeding conditionally approving a rate settlement proposal filed by Cities solely on its behalf, terminating Cities proceedings, and severing the same from these consolidated proceedings. Cities' settlement proposal encompassed a sale by it to United under Cities' FPC Gas Rate Schedule No. 10 in the same unitized Duck Lake Field mentioned above. The circumstances noted in our order of December 26, 1962, *supra*,[2] surrounding such sale by Cities to United are apposite to the sales made by Goodrich and Cocke to United.

In their respective settlement proposals, Goodrich and Cocke incorporated the proposal, terms and reservations made by Cities relevant to the sale to United under Cities FPC Gas Rate Schedule No. 10, which are summarized in the order issued December 26, 1962, *supra*. Accordingly, Goodrich and Cocke also propose to terminate the payment of interest upon applicable refunds on September 30, 1962, as did Cities. For the reason set forth in the December 26 order, we shall require Goodrich and Cocke to pay interest until the date of refund of the excess monies collected, as we did Cities.

The order issued February 29, 1956, mentioned above, also consolidated the proceedings in *C. N. Johnston, et al.*, Docket No. G–9136, *et al.*, with the instant proceedings. We shall sever the Goodrich and Cocke proceedings from the *C. N. Johnston, et al.*, proceedings which are now pending before the presiding examiner.

The instant Settlement Proposals, as herein modified, meet the criteria set forth in the Cities' order issued December 26, 1962, *supra*, and, accordingly, we find them to be in the public interest and they should be approved as hereinafter provided.

Our action herein should not be construed, nor may it be, as constituting approval of any future rate increase, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate proceedings, involving Goodrich's or Cocke's respective rates and rate schedules.

The Commission finds:

(1) The proposed settlement of the subject proceedings on the basis set forth in Cities Settlement Proposal filed October 12, 1962, as modified, and incorporated by Goodrich and Cocke in their proposals, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that they be conditionally approved and conditionally made effective subject to the modifications hereinafter ordered.

(2) Good cause exists for approving the settlement rate, for severing and terminating certain proceedings and providing for refunds.

The Commission orders:

(A) The settlement of these proceedings on the basis of the Settlement Proposals, filed herein, as modified, is approved and made effective subject to the following terms and conditions.

(B) The applicable settlement rates set out in Appendix A hereto, are approved and shall be effective as of the date of issuance of this order.

(C) Goodrich and Cocke shall each, over the signature of a responsible officer, file with the Commission, within 15 days from the date of issuance of this order,

---

[1] Excepting the proceedings in Docket No. RI63–167.

[2] Also see the order issued on June 28, 1962, in *The Ohio Oil Company, et al.*, Docket No. RI60–92, *et al.*, 27 FPC 1373, where a sale by Ohio to United in the Duck Lake Field is discussed.

in writing an original and one copy of its acceptance or rejection of the terms and conditions of this order.

(D) Within 90 days from the date of this order, Goodrich and Cocke shall each make such filings under its rate schedule as are required to make effective the terms of the Settlement Proposal, as modified.

(E) Within 90 days from the date of this order, Goodrich and Cocke shall each (1) refund, with interest as specified in each docket computed to the date of actual refund, the difference between the rates collected subject to refund on and after July 1, 1958 and the related settlement rates; and (2) report to the Commission, in writing, the amount of refund paid to United, showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from United showing receipt of the refunds in conformity with the settlements as modified and approved.

(F) The proceedings in Docket Nos. G–8977, G–8978, G–9570, G–9575, G–12231, G–13610 and G–13611 are hereby severed from the consolidated proceedings heretofore designated as *R. H. Goodrich, et al.*, Docket No. G–8977, *et al.*, which shall be hereafter designated as *C. N. Johnston, et al.*, Docket No. G–9136, *et al.*

(G) Upon full compliance by either Goodrich or Cocke with all the terms and provisions of this order the Section 4(e) proceedings involving their respective FPC Gas Rate Schedules listed in Appendix A hereof shall terminate.

(H) This order is without prejudice to any findings or orders which have been, or may be, made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Goodrich or Cocke, the Commission staff, or any affected party herein, in any proceedings now pending, or hereafter instituted by or against Goodrich or Cocke, or any other companies, person, or parties, affected by this order.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. RP61–19, RP62–7; NATURAL GAS PIPELINE CO. OF AMERICA, DOCKET NO. RP63–6

ORDER INSTITUTING INVESTIGATION, CONSOLIDATING PROCEEDINGS AND DESIGNATING PROCEDURE

(Issued February 25, 1963)

In Opinion No. 367, issued October 25, 1962 (28 FPC 731), a section 4(e) rate proceeding involving Natural Gas Pipeline Company of America (Natural),

the Commission stated that the rate design determined therein would be subject to re-examination in the light of its consideration of the rate design of Midwestern Gas Transmission Company's Southern system in Docket No. RP61–19. On February 18, 1963, the Commission issued an order establishing a procedure for the expeditious hearing of Docket No. RP61–19, p. 320, *supra.*, (which was consolidated with an investigation of the rates of Midwestern's Northern system in Docket No. RP62–7). In order to effectuate the intent expressed in the aforementioned order relating to Natural's rates, it is now appropriate to institute a section 5 proceeding limited to the question of whether the design of Natural's two-part demand and commodity rates is just and reasonable and not unduly discriminatory or preferential. In order to facilitate the prompt resolution of the related rate-design issues, RP63–6 should be consolidated with RP61–19 and RP62–7. The Commission will not at this time set specific dates for the filing of testimony and exhibits relating to Natural. The presiding examiner should have discretion to determine, in the light of his appraisal of the prehearing conference, the stage of the proceedings at which the Natural rate design should be put in issue and the most suitable procedure for trying that issue expeditiously.

The Commission orders:

(A) Pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Power Commission by the Natural Gas Act, particularly Sections 4, 5, and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act (18 CFR, Chapter I), a proceeding is instituted in Docket No. RP63–6 and a public hearing shall be held to determine whether the design of the two-part demand and commodity rate of Natural Gas Pipeline Company of America, is just and reasonable and not unduly preferential or discriminatory.

(B) Docket No. RP63–6 is consolidated for purposes of hearing and decision with Docket Nos. RP61–19 and RP62–7.

(C) The procedure heretofore specified by order of February 18, 1963, in Docket Nos. RP61–19 and RP62–7 shall be followed in these proceedings, but the presiding examiner heretofore designated shall determine the manner in which testimony and exhibits relating to Natural's rates shall be introduced.

(D) Notices and petitions to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Commission's Rules of Practice and Procedure, Sections 1.8 and 1.37(f) [18 CFR 1.8 and 1.37(f)], on or before March 13, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. G–13780

ORDER CONDITIONALLY APPROVING SETTLEMENT PROPOSAL

(Issued February 25, 1963)

On November 7, 1962, Socony Mobil Oil Company, Inc., filed a Petition for Approval of Settlement Proposal. Socony's proposal involves its F.P.C. Gas Rate Schedule No. 198, under which Socony sells gas to Transcontinental Gas Pipe Line Corporation, as well as the pending judicial proceedings in *Socony Mobil Oil Company, Inc.* v. *F.P.C.*, No. 17057, United States Court of Appeals for the District of Columbia Circuit. Those proceedings seek review of our final order in this docket. *Socony Mobil Oil Company, Inc.*, 27 FPC 347, rehearing

denied 27 FPC 675. Socony states that its proposal follows upon discussions with various intervenors in this proceeding. No party has opposed the proposal.[1] In summary, the proposal provides:

(1) The rate to be charged for the future would be that prescribed by our final order herein, which rate is now in effect.

(2) Socony would waive the right to file increased rates prior to July 1, 1967, subject however, to the outcome of any area rate proceeding involving Texas Railroad District Number Three.

(3) Socony would extend the make-up period under the take-or-pay-for provision of its contract to four years.

(4) This Commission would modify its final order herein to reduce by one-third the principal amount of Socony's refund obligation with respect to the period prior to July 5, 1962.[2]

Because the record in this proceeding has been filed in a Court of Appeals we have no power to modify our order (Natural Gas Act, Section 19). We may, however, indicate our approval of the terms of Socony's proposal to become effective only if the petition for review is dismissed. For the reasons stated in our order of December 21, 1962, in the *Catco* proceedings (*Continental Oil Company, et al.*, Docket No. G–11024, *et al.*, 28 FPC 1090), we find Socony's proposal to be in the public interest subject to the conditions set forth below. As in our *Catco* order we find no reason to toll the accrual of interest and shall require the payment of interest until the date of refund of the principal amounts.

The Commission finds:

It is in the public interest and appropriate in carrying out the provisions of the Natural Gas Act that the settlement proposal filed herein be conditionally approved and conditionally made effective subject to the modifications hereinafter ordered.

The Commission orders:

(A) This order shall become effective 15 days after dismissal of any petitions for judicial review of our order of February 9, 1962, herein.

(B) The Settlement Proposal filed herein on November 7, 1962, is approved and made effective subject to ordering paragraph (A), above, and to the following terms and conditions.

(C) Within 60 days from the effective date of this order Socony Mobil Oil Company, Inc., shall refund the principal amounts provided for in the Settlement Proposal plus interest at the rate therein provided until the date of actual refund.

(D) Within 30 days from the effective date of this order Socony shall execute and file all contract amendments and other documents provided for in the Settlement Proposal.

(E) Except as hereby modified our orders of February 9, 1962 (27 FPC 347) and April 6, 1962 (27 FPC 675) shall remain in full force and effect.

(F) The approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against applicant, particularly any proceeding under Section 5 of the Natural Gas Act, and is

---

[1] We expressly note, however, that on December 10, 1962, Philadelphia Electric Company filed a response which reserved Philadelphia's position as to certain matters not here in issue and clarified that position as to certain contingencies which may hereafter arise under the settlement but need not now be anticipated.

[2] This date is based upon our orders granting a temporary stay of the refund provisions of our final order herein.

without prejudice to claims or contentions which may be made by the Commission, applicant, the Commission staff, or any affected party herein in any other proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP63-166

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued February 25, 1963)

On December 10, 1962, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP63-166 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally co-extensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $5,000,000, and no single project will exceed a cost of $500,000. The proposed facilities will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 14, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Texas corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G-1089 (8 FPC 228).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Texas Eastern Transmission Corporation to construct during the calendar year 1963 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Texas Eastern Transmission Corporation.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

IDAHO POWER COMPANY, PROJECT NO. 1971

ORDER APPROVING PROJECT EXHIBITS AND ADJUSTING ANNUAL CHARGES

(Issued February 26, 1963)

On July 9, 1956, November 14, 1958, July 25, 1961 and December 5, 1962, Idaho Power Company, licensee for major Project No. 1971, filed applications for Commission approval of certain revised project exhibits showing the Brownlee and Oxbow boundaries, the Boise-Brady No. 2, 230 kv transmission line areas and boundaries and the Oxbow spillway as constructed. On March 23, 1960, Exhibit F (revised) was filed, but Commission approval of this exhibit is not required.

Commission approval of the revised exhibits filed in connection with the July 9, 1956 application relating to the Oxbow Development would show that development as occupying 1,062.22 acres of lands of the United States, with resultant annual charges for such occupancy in the amount of $2,549.33 effective as of August 1, 1955, the effective date of the license.

Commission approval of the revised exhibits filed in connection with the November 14, 1958 application relating to the Brownlee Development would show that development as occupying 6,499.54 acres of lands of the United States, with resultant annual charges for such occupancy in the amount of $15,598.90, effective as of August 1, 1955.

Commission approval of the revised exhibits filed in connection with the July 25, 1961 application relating to the Boise-Brady No. 2, 230 kv transmission line would show that line as occupying a 150-foot wide right-of-way 114.029 miles long on lands of the United States, with a resultant increase in annual charges for such occupancy in the amount of $39.10, effective as of November 1, 1960, the first day of the month following the operation of the line.

Inasmuch as Instrument No. 24 of the license for Project No. 1971, issued August 24, 1961, provides that the licensee shall design the structures of the Low Hells Canyon development for maximum tailwater elevation at 1,515 feet, and Exhibit M now part of the license, received in the Commission May 15, 1953 provides for a tailwater elevation of 1,475 feet, the last-mentioned exhibit should be eliminated from the license.

The Commission finds:

(1) The following described revised exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit J, inadvertently designated in the license as (FPC No. 2132-2) rather than (FPC No. 2132-1), redesignated as (FPC No. 1971-24); Exhibit J (FPC No. 2133-1), redesignated as (FPC No. 1971-30); (FPC No. 1971 -111, -192 and -193); K (FPC Nos. 1971-112 through -116, -162 through -189, and -194); L (FPC Nos. 1971-106, -107 and -108), revised by the staff in November, 1962; (FPC No. 1971-191); and Exhibit M, revised by the licensee on July 6, 1961.

(2) The following described exhibits, now part of the license for the project and which have been superseded, should be eliminated from the license:

Exhibits J (FPC Nos. 2132-2, 2133-1) (as revised in Instrument No. 2 of the license dated November 3, 1955) (1971-2, -154 and -155); K (FPC No. 1971-157); L (FPC Nos. 1971-106, -107 -108; and -160); M (July 1, 1960) for Boise-Brady Transmission Line; and M for the Hells Canyon Development, filed in the Commission May 15, 1953.

(3) The increased annual charges for recompensing the United States for the use of additional lands of the United States by the project facilities, including the transmission line, are reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The revised exhibits described in finding (1) above are hereby approved as part of the license for Project No. 1971, and the exhibits described in finding (2) above are hereby eliminated from the license.

(B) Paragraph 5 of the license is hereby revised to read as follows:

The project consists of:

(a) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license or application for amendment thereof and which are designated and described as follows:

(b) All project works consisting of:

(1) The Brownlee development consisting of a rock-fill dam having a maximum height of about 395 feet and a crest length of about 1320 feet in the Snake River at river mile 284.6, and a concrete spillway section surmounted by tainter gates, a reservoir with a usable storage capacity of 1,000,000 acre-feet at a draw down of 101 feet below elevation 2077 feet; a controlled intake, power tunnels and penstocks leading to a powerhouse containing four turbines each rated at 142,000 horsepower and connected to a 90,100 kilowatt generator operating under a gross static head of 272 feet, with provision for an additional intake and tunnel and the future installation of two similar units in an extension to the powerhouse; and transmission facilities; the location, nature and character of the project works are more specifically shown and described by the exhibits hereinbefore cited and other exhibits which are designated and described as follows:

Exhibit	FPC No.	Showing
L	1971-150	General plan.
	1971-151	Dam section and elevation.
	1971-152	Penstock plans and spillway section.
	1971-153	Powerhouse plans and section.
M		General description and specifications of equipment, received May 15, 1953.

(2) The Oxbow development, consisting of a rockfill dam having a maximum height of about 180 feet and a crest length of about 945 feet at elevation 1820 feet in the Snake River at river mile 273.2; the Oregon spillway is a tainter gated controlled spillway and the Idaho spillway is a fuse plug structure; a reservoir with usable storage capacity of 5,500 acre-feet at a drawdown of 5 feet below elevation 1,805 feet; a controlled intake; two power tunnels across the Oxbow; two surge tanks; four penstocks; a powerhouse containing four turbines each rated at 73,000 horsepower and connected to a 47,500 kilowatt generator operating under a gross static head of 122 feet; provision for a future tunnel and installation of one similar unit in an extension to the powerhouse; a 230 kv double circuit steel tower transmission line extending from Oxbow power plant approximately 10.4 miles to the Brownlee power plant switchyard; the location, nature and character of the project works are more specifically shown and described by the exhibits hereinbefore cited and other exhibits which are designated and described as follows:

Exhibit	FPC No.	Showing
L	1971-58	Power intake and power conduit; plan, profile and sections.
	1971-59	Powerhouse plans and section.
	1971-106 (rev.)	General plan.
	1971-107 (rev.)	Dam and spillway plan.
L	1971-108 (rev.)	Dam and spillway elevation and sections.
M (1/14/58)		General description and specifications of equipment.
M (1/15/58)		General description and specifications of equipment (Oxbow—Brownlee Transmission Line).

(3) The proposed low Hells Canyon development, to consist of a rockfill dam having a maximum height of 320 feet and a crest length of 860 feet at elevation 1696 feet in the Snake River at river mile 247.5 and a concrete spillway section surmounted by tainter gates, creating a reservoir with a usable storage capacity of 11,200 acre-feet at a drawdown of 5 feet below elevation 1683 feet; an intake and power tunnel and penstocks leading to a powerhouse; a powerhouse containing initially five turbines each rated at 84,000 horsepower and connected to a 54,400 kilowatt generator operating under a gross static head of 208 feet, with provision for an additional tunnel and intake and the future installation of two turbines each rated at 105,000 horsepower and connected to a 68,000 kilowatt generator in an extension to the powerhouse; and transmission facilities; the location, nature, and character of which are more specifically shown and described by the exhibits heretofore cited and by other exhibits which also formed part of the application for license.

Transmission Lines:

(4) The following transmission lines are part of the license, the location, nature and character of the project works are more specifically shown and described by the exhibits hereinbefore cited and other exhibits which are designated and described as follows:

(a) Oxbow—Brownlee (included under Oxbow development).

(b) Oxbow—Pallette Junction—Hells Canyon.

A 230 kv double circuit steel tower transmission line extending from the Oxbow power plant approximately 20.5 miles in a northerly direction to Pallette Junction, thence easterly approximately 8 miles to the proposed Hells Canyon development;

Exhibit M (Revised 4/2/59) General Description and Specifications of Equipment

(c) Pallette Junction—Mountain Sheep (Divide Creek).

A 230 kv single circuit transmission line extending approximately 45.2 miles in a northerly direction from Pallette Junction to a point on the Idaho bank of the Snake River referred to as Mountain Sheep or Divide Creek;

Exhibit M (Revised 4/2/59) General Description and Specifications of Equipment

(d) Boise—Brownlee—Baker.

A 230 kv double circuit steel tower line about 100 miles in length extending from the Brownlee Hydroelectric Plant to Boise Bench substation near Boise, Idaho; and 230 kv single circuit wood tower line about 43 miles in length extending from Brownlee Hydroelectric Plant to Quartz Substation near Baker, Oregon;

(e) Boise—Brady No. 2.

A 230 kv single circuit transmission line extending from the Boise-Bench substation for a distance of about 186.6 miles to Brady substation near American Falls;

Exhibit L (FPC No. 1971–161) Transmission Line Structure Design.

Exhibit L (FPC No. 1971–191) Transmission Line Structure Design.

Exhibit M (Revised 7/6/61) General Description and Specifications of Equipment.

(f) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) Article 44 of the license is revised to read as follows:

Article 44. The Licensee shall pay to the United States the following annual charges:

(a) For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, one (1) cent per horsepower on the authorized installed capacity of 1,268,000 horsepower, plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy generated by the project during the calendar year for which the charge is made.

(b) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands used for transmission line right-of-way $839.72 effective March 1, 1959, and $2,208.07 effective November 1, 1960.

(c) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands excluding transmission line right-of-way:

Development	Amount	Effective date
Brownlee	$15,598.90	Aug. 1, 1955
Oxbow	2,549.33	Do.
Total	18,148.23	Do.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgement of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SLADE, INC. (OPERATOR), DOCKET NOS. G–19986 AND RI61–10; SLADE, INC., DOCKET NO. RI60–147; SLADE, INC. (OPERATOR), ET AL., DOCKET NO. RI60–179; AREA RATE PROCEEDING, DOCKET NO. AR61–1

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued February 27, 1963)

Slade, Inc. (Slade) on January 28, 1963 tendered for filing a document styled an "Application For Rehearing" of Opinion No. 376, 29 FPC 11, issued in the

above-entitled proceedings on January 3, 1963. In that opinion we found that the record did not permit a proper determination of Slade's rates and concluded that under the special circumstances of this case it would be more appropriate to make a determination of the justness and reasonableness of Slade's rates in connection with area rate proceedings. Accordingly, the rate proceedings in Docket Nos. RI60–147 and RI60–179 were consolidated with the Permian Basin area rate proceeding in Docket No. AR61–1, and the rate proceedings in Docket Nos. G–19986 and RI61–10 will be consolidated with an appropriate area rate proceeding.

Under the Natural Gas Act and the Commission's Rules, an Application for Rehearing may only be filed to a final order. The action here complained of by Slade cannot possibly be construed as constituting a final order. Accordingly, we shall treat the document tendered by Slade as a motion for reconsideration.

In support of its motion Slade states, *inter alia*, that (1) the justness and reasonableness of Slade's proposed rates should be determined on the basis of Slade's company-wide cost of service presentation at least insofar as they cover the sale of Slade's own interest-owned gas; (2) decision with respect to the Sinton Dome plant sales should not be deferred to a future unscheduled area rate proceeding; (3) decision as to Slade's wellhead sales in Texas Railroad District No. 7–C were improperly placed in the Permian Basin area proceeding because it will be at least a year and a half before a Commission decision is reached, with possibly two more years to elapse for judicial review, and further because under outstanding Commission orders a producer is not permitted in an area rate proceeding to present evidence as to his own needs; (4) the Commission's action is inconsistent with the construction of Section 4(e) by the court in *Minneapolis Gas Co.* v. *F.P.C.*, 294 F. 2d 212 and (5) the Commission's action is inconsistent with a number of previous cases in which producers were permitted to utilize a company-wide cost of service presentation.

Slade misconstrues the import of our opinion in arguing that the lawfulness of Slade's rates should be determined at least to the extent of Slade's interest in gas sold pursuant to its rate schedules. It is our view that an individual interest owner in a joint venture is not entitled to a rate different from the rate to which the joint venture as a separate entity is entitled. As we stated in our opinion the lawful rate under Section 4(e) for the sale of gas by a joint venture should be determined on the basis of costs applicable to that joint venture. Slade's company-wide cost of service presentation relates only to its own net working interest in gas production arising out of various joint ventures in which it participates, including but not limited to those involved here. Such evidence does not afford a basis for determining the lawfulness of Slade's rates in any respect, even assuming *arguendo* that Slade with respect to a particular joint venture might be entitled to a higher rate than the joint ventures as a group.

We are aware that Slade as the operator of the several joint ventures involved in the wellhead sales in issue was required to file for all non-signatory interest holders under our rules. We are also aware that in some instances in the past we have considered the justness and reasonableness of the price for gas sold from such joint ventures on the basis of the company-wide costs of the venturer who happened to be the operator. But we have determined here, and now reiterate, that, at least in situations such as the present one where the operator has only a minor interest in the ventures in issue and his other activities are of limited nature, the general deficiencies of individual company cost-of-service adverted to in *Phillips*, 24 FPC 537, are so magnified that no reliance upon the technique as a pricing system is possible. This means, we recognize that *Slade*

has gone through a hearing in vain; but our failure to terminate the proceeding after we decided in the *Phillips* decision to move to area pricing could not and did not guarantee we would proceed to decision on Slade's basis even if we determined it led to a basically fallacious result.

Slade misconstrues the import of our opinion and of our rules, as well as the nature of its own rate filing in arguing that the lawfulness of its rates should be determined on the basis of its company-wide costs at least to the extent of Slade's interest in gas sold pursuant to its rate schedules. It has been and remains our view that an operator of a joint venture making a sale in interstate commerce, must file for all non-signatory venturers and is not himself entitled to a rate different from that which the venturers as a group are entitled. As we stated in our opinion, however, the lawful rate under Section 4(e) for the sale of gas by such joint venturers should be determined on the basis of costs applicable to the group as a whole.

Even if Slade were now to make an offer to show the costs of its other venturers,[1] we would refuse to entertain it, in view of the fact that these sales are in the Permian Basin and are already subject to the outcome of the proceeding there. We certainly will not accept Slade's suggestion that having filed for the entire joint venture as required by our rules, we should now permit it to secure a price for its share of the gas, leaving the other interest holders high and dry. Such a solution (coupled with requiring all interest holders to file separately) may, as we suggested in *Phillips*, be the consequence of following cost-of-service to its logical extremes. But we have no intention pending conclusion of the area price hearings of entering the impassable administrative thicket such a procedure would entail.

In arguing that the proceedings involving its wellhead sales should not have been placed in the Permain Basin proceeding because of the time factor, Slade apparently assumes that if the proceedings were remanded to the examiner there would be a much shorter period of time required for a Commission decision. Slade is and has been a respondent in the Permain Basin area rate proceeding (Docket No. AR61–1) and its prospective rates for sales in that area will be determined in the Permain proceeding. Since the direct cases of all parties will shortly be a matter of record therein, and the hearing concluded in a few months, reopening of the Slade proceedings would not be warranted. Slade has been required to submit its operating and cost data in the area proceeding for incorporation in the composite industry data of record in that proceeding. For the reasons indicated in our previous orders in Docket No. AR61–1, Slade's individual presentation is not competent evidence in the area proceeding at this juncture.

The *Minneapolis Gas* case, *supra*, cited by Slade is inapposite here. In that case the court ruled that the Commission could not terminate a rate proceeding under Section 4(e) without making a determination of the justness and reasonableness of the rate involved therein. In the instant case, however, we did not purport to terminate these proceedings but in view of the inadequate record have merely chosen a more appropriate means of making the determination required under Section 4(e). And we did so after fully explaining our reasons therefor. See *Wisconsin* v. *F.P.C.*, 303 F. 2d 380, C.A.D.C., pending on *certiorari* Nos. 72–74, this term.

---

[1] Slade's protestation that it does not know and might not be able to determine the costs of the other venturers for whom it serves as operator is hardly persuasive. If they were advised that their chance of recovering a rate increase depended upon such information it seems inconceivable that they would refuse to supply it.

We recognize, of course, that there has not yet been initiated an area rate proceeding for the area in which Slade's plant sales are made. We fail to understand, however, how the foregoing situation places Slade in any worse position than any other producer involved in a Section 4(e) proceeding with respect to production in an area for which there is at the present time no area proceeding in progress. Nor do we think that Slade should be placed in any better position with respect to its plant sales in view of the circumstances involved herein. The deficiencies in the present record were pointed out in our opinion.[2] It was also explained why the individual cost-of-service approach was particularly inappropriate with respect to Slade's plant sales. In this connection we also note Slade's statement that it cannot show the costs applicable to producers making sales to Slade at the plant. Slade's position merely reinforces our conclusion that a Section 4(e) determination here must await an area proceeding.

The other matters referred to by Slade in its motion have been adequately disposed of by our discussion in Opinion No. 376 and need not be reiterated here.

The Commission orders:

For the reasons set forth above the motion for reconsideration, styled as an application for rehearing, filed by Slade on January 28, 1963 in these proceedings is hereby denied.

Commissioner Ross *dissenting*, filed a separate statement.

Commissioner Morgan *dissenting* concurred in the statement filed by Commissioner Ross.

Ross, *Commissioner*, dissenting:

Upon reconsideration I believe this proceeding should be remanded to the Examiner to permit the introduction of evidence considered necessary for resolution of the issues herein.

In the recent *Hunt* case (Opinion No. 365), issued October 17, 1962 (28 FPC 623), a unanimous Commission stated its intention to continue to process and decide Section 4(e) proceedings involving individual companies as promptly as the record in each case permits. We explicitly reaffirmed this intention in the initial opinion in this case. I cannot reconcile this statement of policy with the majority's action here.

In the *Hunt* case, *supra*, the Commission gave the applicants a further opportunity to justify the proposed rate increases because the standards by which the Commission stated it would make its determination had not previously been announced. Here, however, despite the majority's acknowledgment that the standards by which it views this case were enunciated for the first time in the initial opinion herein, it refuses to take the action adopted in *Hunt*, *supra*.

Slade filed the instant rate increases in late 1959 and early 1960. Through all the stages of this proceeding, Slade conscientiously attempted, through conference and exchange of views, to submit a clear and concise evidentiary record

[2] With regard to its plant cost-of-service, Slade claims the record is clear that Slade's unit production costs were used only for Slade's share of gas compressed at the plant and that the share of gas compressed at the plant attributable to the other venturers involved with Slade was computed at the applicable test period contract prices. Gas is sold to the plant by two joint ventures from wells on the J. D. Hollan and McDaniels leases in San Patricio County, Texas, which are operated by Slade and in which Slade is a joint venturer with interests of 75% and 25%, respectively. We note that a number of these venturers are directly affiliated with Slade (T. 124–125). Under these circumstances there can be no justification, even assuming *arguendo* that it would otherwise be proper here, for including the contract price with respect to affiliated venturers in Slade's cost-of-service.

under the principles thought controlling at the time. Slade's efforts in this respect permitted a brief hearing[1] after which a stipulation was entered limiting the controverted cost of service questions and defining the remaining areas of conflict. The Examiner's decision was released November 1, 1961 and exceptions were filed November 21, 1961. This case has been before us since that time. In my opinion, Slade deserves better treatment than it has received from the majority. As a matter of fact, I believe we are required to make a decision in this case as quickly as possible, under the rationale of the *Minneapolis Gas* case.[2] While it is true, as the majority suggests, that this case is not being terminated without a decision on the merits (the situation in *Minneapolis Gas, supra*) there is little practical difference between terminating a proceeding without decision, and placing it in a never-never land by splitting it into one area rate proceeding, the final decision which is far from imminent, and into a second area rate case which is not even off the ground as yet.

The majority's opinion presumably[3] describes what factors are considered appropriate to permit a decision in this case. In my opinion we should provide for the introduction of evidence on these factors in the quickest and least complicated manner, which I believe consists in remanding the case to the Examiner.

Commissioner Morgan has authorized me to state that he concurs in this dissent.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EXCEPTIONS TO INTERMEDIATE DECISIONS—REPLIES—STATEMENTS IN SUPPORT, DOCKET NO. R-233

ORDER NO. 263

AMENDING § 1.31 OF RULES OF PRACTICE AND PROCEDURE

(Issued February 28, 1963)*

The Commission, constantly searching for means to improve its procedures, has before it a suggestion that provision be made in its Rules of Practice and Procedure for the filing of responses to exceptions to the intermediate decisions of its hearing examiners. We recognize that adding another step in the hearing procedures will, to some extent, add to the mass of pleadings and delay the earliest date for a Commission decision by at least the response period provided. It is our view, however, that such a provision will permit parties to direct themselves to matters raised for the first time in exceptions, and that this will not only add an additional element of fairness to our procedures but should actually result in expediting Commission action on appeals from examiners' decisions.

We are, therefore, amending our rules to provide for replies to exceptions. The amendment also permits the filing of a statement in support of an examiner's decision. It should be noted, however, that only the one additional step in our proceedings is provided. Counter responses will not be entertained except when the Commission, upon motion, expressly authorizes their submission. In order to prevent unnecessary reargument of points already covered in pleadings

---

[1] The hearing required only three days and 242 pages of transcript.

[2] *Minneapolis Gas Company* v. *F.P.C.*, 294 F. 2d 212 (C.A.D.C. 1961).

[3] Use of the word "presumably" seems necessary, for while the Commission has issued opinions in 4(e) proceedings describing factors it considers relevant, we have not as yet decided a single such case involving producers.

*Published in the Federal Register on March 7, 1963 (28 F.R. 2233).

filed by the parties, we are limiting the newly authorized replies to a total of 25 pages.

It appears that the amendment adopted herein pertains to Commission practice and procedure and hence that section 4 of the Administrative Procedure Act is not applicable.

The Commission finds:

(1) The amendment adopted herein is necessary and appropriate for the purposes of administration of the Federal Power and Natural Gas Acts.

The Commission, acting pursuant to the authority granted by the Federal Power Act, as amended, particularly sections 308 and 309 thereof (49 Stat. 858; 16 U.S.C. 825g, 825h) and the Natural Gas Act, as amended, particularly sections 15 and 16 thereof (52 Stat. 829, 830; 15 U.S.C. 717n, 717o) *orders:*

(A) Paragraph (a) of § 1.31, Rules of Practice and Procedure, Subchapter A, Chapter I, Title 18 of the Code of Federal Regulations, is amended to read as follows:

(a) *Exceptions, filing of.* Any party or staff counsel desiring to appeal to the Commission may, within 20 days after the service of a copy of an intermediate decision (initial or recommended by subordinates, or tentative by Commission), or such other time as may be fixed by the Commission, file exceptions thereto. Statements in support of the decision, in form similar to statements of exceptions, may be filed within the same period. Replies of no more than 25 printed pages in length may be filed within 10 days of service of the exceptions. No further pleadings in response to replies will be entertained unless the Commission, upon motion or its own initiative, so orders. Exceptions, statements in support and replies shall conform to the requirements of §§ 1.15, 1.16 and 1.17, but need not be verified under oath.

[Secs. 308, 309, 49 Stat. 858, 16 U.S.C. 825g, 825h; secs. 15, 16, 52 Stat. 829, 830, 15 U.S.C. 717n, 717o.]

(B) This amendment will become effective on April 1, 1963.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

[LETTER REJECTING AMENDATORY AGREEMENT]

February 13, 1963*

Humble Oil & Refining Company [CI62-847]
P.O. Box 2180
Houston 1, Texas

Attention: Messrs. John J. Carter and Jesse H. Foster

Gentlemen: This is with reference to your letter of January 15, 1963, submitting for filing an amendatory agreement dated June 14, 1962, which amends a gas sales contract dated August 7, 1952 (Humble's FPC Gas Rate Schedule No. 302). Since the amendatory agreement includes pricing provisions other than those permitted by Section 154.93 of the Commission's Regulations, it is hereby rejected in accordance with Section 154.100 of the Regulations. All available copies are returned herewith.

This rejection is without prejudice to the resubmittal of an original and two copies of your application which do not contain the unacceptable pricing provisions.

Very truly yours,

J. H. GUTRIDE, *Secretary.*

---

*Reconsideration denied, April 18, 1963, 29 FPC 774. Petition for Review filed on June 13, 1963, in *Humble Oil & Refining Company* v. *F.P.C.* (CA5 No. 20616).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

ALABAMA-TENNESSEE NATURAL GAS COMPANY, LOCKET NO. CP62-197

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 4, 1963)

On December 3, 1962, Alabama-Tennessee Natural Gas Company (Applicant) filed in Docket No. CP62-197 an application to amend the order issued in said docket on May 18, 1962, so as to provide that the compressor unit authorized by said order to be operated on a standby basis may also be operated in such manner as to enable Applicant to serve the City of Huntsville, Alabama, an existing customer, with additional volumes of natural gas of up to 1,000 Mcf per day, when and if required by Huntsville during the 1962-63 winter season, all as more fully set forth in the application to amend.

Huntsville has advised Applicant that because of the increased activity at the Redstone Arsenal and the concomitant increase in residential construction in the Huntsville area, it has been necessary to reexamine the previous estimates of Huntsville's 1962-63 peak day requirements. On the basis of that reexamination, Huntsville now estimates that its peak day requirements for the 1962-63 winter season will exceed its previous estimates by approximately 1,000 Mcf per day. Huntsville has also advised Applicant that Huntsville's peak shaving plant lacks the necessary capacity required to provide the additional peak day volume needed for space heating. Accordingly, Huntsville has requested Applicant to supply up to 1,000 Mcf of gas in addition to that heretofore shown to be necessary.

Notice of the application to amend was issued on January 17, 1963, and published in the Federal Register on January 24, 1963 (28 F.R. 661). No protest, request for hearing, or petition to intervene has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity required that the order of the Commission issued May 18, 1962, in Docket No. CP62-197, 27 FPC 904, be amended to authorize Applicant, Alabama-Tennessee Natural Gas Company, to operate the subject facilities to serve the City of Huntsville, Alabama, with additional volumes of gas up to 1,000 Mcf per day, when and if required during the 1962-63 winter season.

The Commission orders:

(A) The order of the Commission issued May 18, 1962, in Docket No. CP62-197, be and the same is hereby amended to authorize Applicant, Alabama-Tennessee Natural Gas Company, to operate the subject facilities to serve the City of Huntsville, Alabama, with additional volumes of gas up to 1,000 Mcf per day, when and if required during the 1962-63 winter season.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

FLORIDA GAS TRANSMISSION COMPANY (FORMERLY COASTAL TRANSMISSION CORPORATION), DOCKET NO. CP61-287

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 4, 1963)

On January 21, 1963, Florida Gas Transmission Company (formerly Coastal Transmission Corporation) (Movant) filed in Docket No. CP61-287 a motion for extension of time within which to complete construction and place in actual operation certain facilities authorized by the Commission's order of July 27, 1962, 28 FPC 231, in the subject docket. Said order required the facilities to be completed and placed in actual operation within six months from the date on which the order was issued.

The lateral pipeline to the Pecaniere Field authorized by the order of July 27, 1962, has been completed and placed in operation; however, Movant has encountered difficulty in obtaining the necessary right-of-way for the certificated lateral pipelines to the Lake Fausse Point Field and the Lake Mongoulois Field due to the proliferation of land ownership in the areas involved.

By notice issued January 23, 1963, the time for the completion of construction and placing facilities in operation was extended to and including April 29, 1963. In the subject motion Movant has requested an extension through July 27, 1963.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order of July 27, 1963, in Docket No. CP61-287 be amended to extend the time for the completion of construction and placing the facilities in actual operation as hereinafter ordered.

The Commission orders:

(A) The order of July 27, 1962, in Docket No. CP61-287, be and the same is hereby amended to extend the time for the completion of construction and placing the facilities in actual operation to and including July 27, 1963.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

HOPE NATURAL GAS COMPANY, DOCKET NO. CP63-171

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 4, 1963)

On December 17, 1962, Hope Natural Gas Company (Applicant) filed an application in Docket No. CP63-171 pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the installation of an 1,100 horsepower engine in its Bridgeport Storage Compressor Station to replace four old and obsolete 500 horsepower engine units now installed there.

Applicant states that the four engine units to be replaced are old, unreliable

and costly to operate and that a new engine of 1,100 horsepower capacity can do the service more efficiently and economically than the four units to be replaced. They pump natural gas into and out of Applicant's storage field in Harrison and Taylor Counties, West Virginia which serve several distribution market areas in West Virginia.

The estimated cost of the replacement facilities is $275.000, and the cost of removal of the old units is $13,000.

No change in existing service will result from the proposed installation and replacement.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 25, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Hope Natural Gas Company, is "a natural gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 26, 1942, in Docket No. G–100 (3 FPC 151).

(2) The facilities hereinbefore described, all as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Hope Natural Gas Company, to construct, operate and replace facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall complete the authorized facilities and place them in operation within 6 months from the date of the order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

HURLEY OIL AND GAS COMPANY, DOCKET NO. G–17775

ORDER DENYING RECONSIDERATION AND MODIFICATION OF ORDER

(Issued March 4, 1963)

On February 8, 1963, Hurley Oil and Gas Company (Hurley) filed an application for reconsideration and modification of the Commission's order of January 14, 1963, 29 FPC 71, wherein, among other things, we vacated our letter order of June 29, 1960, reinstated our letter order of March 11, 1959, and referred to the presiding examiner in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, Hurley's motion to remove the price refund condition from the temporary certificate issued to Hurley on March 11, 1959. We noted in our order of January 14, 1963, that Hurley had failed to serve a copy of its "Motion to Remove Price Refund Condition From Temporary Authorization" upon the New York Public Service Commission (New York), an intervener in the proceeding in Docket No. G–17775. As a result thereof New York had not had an opportunity to respond to the motion. Hurley had previously accepted a temporary certificate with the price refund condition contained therein, and, under the circumstances, it was proper that the amending letter order be vacated and the original temporary certificate be reinstated.

Hurley, in its application for reconsideration, argues that Section 7(c) of the Natural Gas Act provides for the issuance of temporary certificates without notice or hearing on an *ex parte* basis and that modification of the temporary certificate assumes merely the same notice requirements that the temporary certificate itself assumes. It argues that there is no provision for hearings on temporary certificates, and that New York has no standing in the matter of the temporary. It further argues that there can be no proceeding under a temporary certificate and since notice procedures need be filed only "in proceedings pending before the Commission" that New York was not entitled to a copy of the motion to amend the temporary certificate. Finally, Hurley argues that the only evidence permitted for the exercise of the Commission's discretion upon the granting of a temporary certificate is that which demonstrates the existence of an emergency. It states that there can be no additional evidence introduced by either Hurley or New York pertaining to the temporary authorization and, therefore, nothing for the presiding examiner to rule upon.

There is no question but that the Commission may issue a temporary certificate without notice or hearing. Section 7 of the Natural Gas Act specifically provides that "the Commission may issue a temporary certificate in cases of emergency, to assure maintenance of adequate service or to serve particular customers, *without notice or hearing*, pending the determination of an application for a certificate." (Emphasis added.) In fact, in this case the Commission did issue to Hurley, without notice or hearing, a temporary certificate conditioned upon Hurley refunding to Transco any amounts in excess of the amount resulting from the rate finally determined to be proper. Hurley accepted this temporary certificate. At that time New York's interests were protected by this refund condition. However, when Hurley moved to remove the price refund condition, it could be anticipated that, New York's interests having been affected, New York would desire to respond. Hurley had full notice that New York was a participant in the proceeding. New York's notice of intervention had been served upon Hurley; the Commission's order recog-

nizing such participation had been served upon Hurley. Both of these actions took place prior to the time that Hurley filed its motion. The failure to make such service upon New York necessarily deprived it of an opportunity to respond thereto. This opportunity is a fundamental aspect of the granting of due process to all parties in an administrative proceeding.

We have determined that the granting of the Hurley motion by our letter order of June 29, 1960, was improper, in view of the fact that New York had had no opportunity to present its views. The only course of action which properly can be taken now by us is to allow New York an opportunity to demonstrate with appropriate evidence why the motion should not be granted, at the same time allowing Hurley to demonstrate why it should be granted. Since the matter is now pending before a hearing examiner, we feel that, in the first instance, the decision should be made by such examiner. Accordingly we have directed that it should be ruled upon by the presiding examiner as a part of his initial decision.

The Commission finds:

No basis has been demonstrated by Hurley Oil and Gas Company which justifies reconsiderations and modification of our order of January 14, 1963.

The Commission orders:

The application for Reconsideration and Modification of our January 14, 1963 order in the above named proceeding filed by Hurley Oil and Gas Company on February 8, 1963, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP63-130

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 4, 1963)

On November 13, 1962, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP63-130 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963 and the operation of unspecified natural gas facilities for the delivery of natural gas to existing customers, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in constructing and placing in operation certain natural gas delivery facilities without the delay incident to the filing and processing of individual certificate applications.

The total cost of the proposed facilities will not exceed a maximum of $168,000, and no single project will exceed a cost of $20,000. The application states that the proposed facilities will be financed from funds on hand.

No increase over presently authorized volumes is requested in the instant application. Applicant proposes to establish additional delivery points to enable existing customers to provide gas service in areas heretofore without such service. The proposed service will be subject to the following conditions:

(a) Applicant's customer proposing service in the new area will not require an increase in the contract volume presently available from Applicant;

(b) The service will be in an area not heretofore served with natural gas;

(c) Applicant's customer proposing the service has obtained such authorization therefor as may be required;

(d) The estimated peak day delivery requirements in the first and third years of operations for the new area or areas are less than 2% and 5%, respectively, of the total peak day volumes of natural gas, including storage service, available from Applicant to the customer proposing such service or 5,000 Mcf, whichever is less; and

(e) Applicant's customer proposing the service does not propose, under the authorization herein sought, to serve an industrial customer in the new area that would use in excess of 10,000 Mcf of gas per month.

Applicant has not requested any change in the design or operation of its pipeline system or in the rates now charged by it by reason of the construction of the proposed facilities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 21, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and delivery of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicant are subject to the requirement of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities and the transportation and delivery of natural gas to serve existing customers as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) location of facilities, (b) description of facilities, (c) actual installed cost of facilities, (d) resale customer served, (e) new area served, and (f) estimated annual and peak day requirements of the new area in the third year of operation.

(7) Public convenience and necessity require that the certificate issued hereinafter should be subject to the following conditions:

(a) Applicant's customer proposing service in the new area will not require an increase in the contract volume presently available from Applicant;

(b) The service will be in an area not heretofore served with natural gas;

(c) Applicant's customer proposing the service has obtained such authorization therefor as may be required;

(d) The estimated peak day delivery requirements in the first and third years of operations for the new area or areas are less than 2% and 5%, respectively, of the total peak day volumes of natural gas, including storage service, available from Applicant to the customer proposing such service or 5,000 Mcf, whichever is less; and

(e) Applicant's customer proposing the service does not propose, under the authorization herein sought, to serve an industrial customer in the new area that would use in excess of 10,000 Mcf of gas per month.

(8) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $168,000, with no single project to exceed a cost of $20,000.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct during the calendar year 1963 facilities for the transportation and delivery of natural gas and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) location of facilities, (b) description of facilities, (c) actual installed cost of facilities, (d) resale customer served, (e) new area served, and (f) estimated annual and peak day requirements of the new area in the third year of operation.

(D) The certificate issued by paragraph (A) above is subject to the following conditions:

(a) Applicant's customer proposing service in the new area will not require an increase in the contract volume presently available from Applicant;

(b) The service will be in an area not heretofore served with natural gas;

(c) Applicant's customer proposing the service has obtained such authorization therefor as may be required;

(d) The estimated peak day delivery requirements in the first and third years of operations for the new area or areas are less than 2% and 5%, respectively, of the total peak day volumes of natural gas, including storage service, available from Applicant to the customer proposing such service or 5,000 Mcf, whichever is less; and

(e) Applicant's customer proposing the service does not propose, under the authorization herein sought, to serve an industrial customer in the new area that would use in excess of 10,000 Mcf of gas per month.

(E) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $168,000, with no single project to exceed a cost of $20,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY AND SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-146

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 4, 1963)

On November 28, 1962, Tennessee Gas Transmission Company (Tennessee) and Southern Natural Gas Company (Southern) filed in Docket No. CP63-146 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of two emergency interconnections between the pipeline systems of the two companies and the exchange of natural gas, all as more fully set forth in the application.

Applicants propose to locate the emergency interconnections at the point where Southern's 24-inch Second North Main Line crosses Tennessee's 30-inch Delta-Portland Line in Lowndes County, Mississippi, and at the point where Southern's 18-inch line crosses Tennessee's 30-inch Delta-Portland Line in Clarke County. Mississippi.

The total cost of the proposed facilities is estimated to be $35,406. Of this amount, $12,916 will be shared equally between the Applicants for tie-over lines and metering facilities, and the balance will be expended by the individual Applicants for taps and side valves. The facilities will be financed from funds on hand or from revolving credit.

The proposed facilities will be utilized when either company is confronted with an emergency which can be alleviated by the deliveries of natural gas from the other when such deliveries can be made without impairment of service obligations to others. All deliveries will be made on a gas-for-gas exchange basis.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 19, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of July 15, 1947, in Docket No. G-910 (6 FPC 777).

(2) Applicant, Southern Natural Gas Company, a Delaware corporation hav-

ing its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(3) The facilities hereinafter described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and delivery of natural gas by Applicants is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities and the transportation and delivery of natural gas by Applicants are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of the such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicants, Tennessee Gas Transmission Company and Southern Natural Gas Company, to construct and operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63–66

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSSITY

(Issued March 5, 1963)

On September 17, 1962, Cities Service Gas Company (Applicant) filed in Docket No. CP63–66 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing construction and operation during the calendar year of 1963 of certain miscellaneous natural gas transmission facilities, all as more fully set forth in application.

Applicant seeks authority herein to construct during 1963 and operate certain miscellaneous natural gas transmission facilities. It may become necessary or desirable for Applicant to move, relocate, alter or reconstruct existing natural gas pipeline facilities, or to construct substitute facilities for existing ones, in order to accommodate the desires or activities of others, including Federal, State, and local authorities, landowners and direct industrial and resale customers.

The construction and operation of the proposed facilities will be initiated upon the requests from others as above mentioned where Applicant's existing facilities interfere with highways or other Federal, State or local improvement projects, or with proposed utilization or sale of land by the owners or where changes in Applicant's facilities are required or necessitated in connection with changes in plant facilities of direct industrial or utility customers of Applicant. In some cases the use of facilities would be discontinued following changes made. In most instances the cost of reclaiming or altering facilities will be borne entirely or partly by the party desiring and requesting the change. Ordinarily no increase or decrease in design or capacity of the particular facility being altered or replaced will be involved, nor will there be any essential change in the character of Applicant's service to any of its customers.

Not more than ten projects of the kind above described will be constructed during the year. No single project will exceed a cost of $50,000 and the total cost of all projects will not exceed $500,000. These costs may be offset in whole or in part by reimbursement from others.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 20, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, is a natural gas company within the meaning of the Natural Gas Act, as is stated in the application on file herein and as heretofore found by the Commission in its order of December 28, 1943, in Docket No. 298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation hereof by Applicant are subject to the requirements of Subsection (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and installation of the facilities proposed during the calendar year 1963 and their operation for continued delivery of natural gas by the Applicant are required by public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The authorization granted herein should be limited to construction during the calendar year 1963 and the total expenditures for all facilities so authorized should be limited to a maximum of $500,000 with no single project to exceed a cost of $50,000.

(6) Public convenience and necessity require that the certificate issued and the rights granted thereunder be conditioned upon Applicant's compliance with

all applicable regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit on or before April 1, 1964 a statement containing a description, cost, name and location of each project; the name of each customer to be served thereby, the expected date of termination of temporary customers, if any, and the amount of the annual revenues together with the estimated annual volumes of deliveries of gas to each customer.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Cities Service Gas Company to construct and operate natural gas facilities and to sell natural gas as hereinbefore described, and as more fully described in the application in this proceeding upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities authorized to be constructed are hereby limited to a maximum of $500,000, with no single project to exceed a cost of $50,000.

(D) Applicant shall submit on or before April 1, 1964, a statement showing (a) complete information as to actual construction, (b) cost of each installation, (c) name and location of each customer, (d) actual facilities installed for each customer, (e) expected date of termination of service to temporary customers, (f) expected annual revenues, and (g) expected annual deliveries to each customer.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

J. M. HUBER CORPORATION, DOCKET NO. G–8111; J. M. HUBER CORPORATION v. NORTHERN NATURAL GAS COMPANY, DOCKET NO. G–8112

FINDINGS AND ORDER DISMISSING COMPLAINT AND DISMISSING PETITION FOR DECLARATORY ORDER

(Issued March 5, 1963)

On April 21, 1936, J. M. Huber Corporation (Huber), an independent producer, and Northern Natural Gas Company (Northern), a pipeline, entered into a contract for the sale of natural gas by Huber to Northern. Under the terms of the contract, Huber was allowed to add to the sale price of the gas any Texas production tax; and further, Huber was given the right to cancel the contract if a government regulatory body established a sale price less than that provided by the contract. The Texas production tax was increased on September 1, 1954, and Huber claimed that the Commission's Order No. 174–A prevented it

from receiving the amount of the increase from Northern and the latter from paying it. Accordingly, on September 1, 1954, Huber gave Northern notice that it intended to cancel the contract in 180 days on March 1, 1955.

On September 24, 1954, Huber filed with the Commission an application for a certificate of public convenience and necessity authorizing the sale to Northern while at the same time specifically reserving the right to challenge the legality and applicability of the Commission's Order No. 174–A, 13 FPC 1255. The application was assigned Docket No. G–3038. On the same day Huber also filed with the Commission a notice of cancellation of the rate schedule for the sale to Northern and specifically reserved the right to challenge the applicability of Section 7(b) of the Natural Gas Act to the sale. This notice was assigned Docket No. G–4957. Northern filed a petition to intervene in Docket No. G–3038 and a complaint against Huber for the cancellation of the contract and threatened termination of deliveries. The petition to intervene was granted and the complaint was designated as Docket No. G–4326. On December 30, 1954, the Commission rejected the notice of cancellation. Thereupon, on January 14, 1955, Huber filed a notice of withdrawal of the application for a certificate and stated that it was not willing to conform to the provisions of Section 7(e) of the Natural Gas Act and that therefore the certificate should not be issued.

On January 25, 1955, Huber filed a petition for a declaratory order to terminate the controversy and remove uncertainty with reference to the aforementioned proceedings. Concurrently therewith Huber filed a complaint against Northern for failure to obtain a certificate for the facilities used for the purpose of transporting the gas purchased from Huber. The petition was assigned Docket No. G–8111 and the complaint was assigned Docket No. G–8112.

On January 26, 1955, Docket Nos. G–3038, G–4326, and G–4957 came on for hearing. On January 27, 1955, Huber filed a notice of withdrawal of the notice of cancellation of the rate schedule filed on September 24, 1954, in Docket No. G–4957. The hearing was concluded on January 28, 1955.

After being notified of Huber's intention to discontinue the sale on March 10, 1955, without Commission approval and prior to a determination of the matters then before the Commission, the Commission sought and there was issued a temporary restraining order and then an injunction prohibiting Huber from discontinuing the sale.[1]

The Presiding Examiner filed his decision in the consolidated proceeding and issued a certificate to Huber and denied the application for abandonment of service, 14 FPC 340. On October 6, 1955, 14 FPC 353, the Commission affirmed the decision in its entirety and rehearing was denied by an order of the Commission issued November 29, 1955. The order issuing the certificate and denying the abandonment was judicially reviewed and was affirmed on August 31, 1956.[2]

The petition and complaint in Docket Nos. G–8111 and G–8112, respectively, have never been formally considered by the Commission although the issues raised therein have been finally determined in the consolidated proceeding in Docket No. G–3038, *et al.*

The Commission finds:

The issues raised in the petition and complaint in Docket Nos. G–8111 and G–8112, respectively, have been fully considered and finally determined in the proceedings in Docket No. G–3038, *et al.*

The Commission orders:

The petition and complaint in Docket Nos. G–8111 and G–8112, respectively, be and the same are hereby dismissed as moot.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NORTH STAR NATURAL GAS COMPANY OF WISCONSIN, INC., DOCKET NO. CP63–44; NORTH STAR NATURAL GAS COMPANY, DOCKET NO. CP63–45; MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. G–18313

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALES OF NATURAL GAS AND ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 5, 1963)

On August 16, 1962, North Star Natural Gas Company, of Wisconsin, Inc. (North Star Wisconsin), filed in Docket No. CP63–44 an application pursuant to section 7(a) of the Natural Gas Act for an order of the Commission directing Midwestern Gas Transmission Company (Midwestern) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to North Star Wisconsin for resale and distribution in the Village of Dresser, Wisconsin, and environs, all as more fully set forth in the application in Docket No. CP63–44.

North Star Wisconsin proposes to construct and operate a lateral transmission line connecting Midwestern's main transmission line with the distribution system North Star Wisconsin proposes to construct and operate in Dresser. The total estimated cost of the proposed facilities is shown to be $68,600, which cost will be financed by short term financing and by cash generated from operation.

On August 16, 1962, North Star Natural Gas Company (North Star) filed in Docket No. CP63–45 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Midwestern to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to North Star for resale and distribution in the Village of Bertha, Minnesota, and environs, all as more fully set forth in the application in Docket No. CP63–45.

North Star proposes to construct and operate a lateral transmission line connecting Midwestern's main transmission line with the distribution system North Star proposes to construct and operate in Bertha. The total estimated cost of the proposed facilities is shown to be $153,800, which cost will be financed by short term financing and by cash generated from operation.

The estimated third year peak day and annual natural gas requirements for Dresser and Bertha are:

	Peak day (Mcf)	Annual (Mcf)
Dresser	142	102, 722
Bertha	296	155, 908

Applicants have received franchises from the communities wherein natural gas service is proposed.

On September 20, 1962, Midwestern filed an answer to the subject applications stating that it does not oppose them and is willing to render the proposed services. In order to provide service to North Star Wisconsin and North Star, Midwestern states that it is necessary to amend the Commission's order accompanying Opinion No. 331, issued October 31, 1959, 22 FPC 775, as amended, in Docket No. G–18313 in order to revise certain of its contract demand allocations.

Accordingly, on September 20, 1962, as supplemented on October 18, 1962, Midwestern filed in Docket No. G–18313 a motion to amend the order accompanying Opinion No. 331, issued October 31, 1959, as amended, by reducing the contract demand of the Village of Hawley, Minnesota, by 162 Mcf and the contract demand of Montana-Dakota Utilities Company by 1,500 Mcf. Midwestern states that said customers have requested the foregoing reductions.

It appears, therefore, that the subject order accompanying Opinion No. 331 should be further amended by reallocating the volumes of natural gas that Midwestern is obligated to deliver to its customers as proposed in the "Analysis of Third Year Contract Demand Allocation" schedule attached to Midwestern's motion to amend as Exhibit A. As a result of such a reallocation Midwestern will have 1,699 Mcf of unallocated gas supply which will be adequate to meet the combined third year maximum day requirements for Bertha and Dresser.

Due notice of the filing of the applications and the motion to amend and opportunity for hearing thereon has been given by publication in the Federal Register on January 23, 1963 (28 FR 606). No protest or petition to intervene has been filed in these proceedings.

The Commission finds:

(1) Midwestern Gas Transmission Company, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued May 12, 1959, in Docket No. G–16841 (21 FPC 653).

(2) Applicant, North Star Natural Gas Company of Wisconsin, Inc., is a public utility duly organized and existing under the laws of the State of Wisconsin and authorized to engage in the business of distributing and selling natural gas within said State.

(3) Applicant, North Star Natural Gas Company, is a public utility duly organized and existing under the laws of the State of Minnesota and authorized to engage in the business of distributing and selling natural gas within said State.

(4) It is necessary and desirable in the public interest that Midwestern be directed to establish physical connection of its natural gas transmission system with the proposed facilities of North Star Wisconsin and North Star and to sell and deliver up to 142 Mcf of natural gas per day to North Star Wisconsin and to sell and deliver up to 296 Mcf of natural gas per day to North Star, as set forth in the applications in Docket Nos. CP63–44 and CP63–45, and as hereinafter ordered and conditioned.

(5) North Star Wisconsin and North Star should be prepared to receive natural gas from Midwestern within one year from the date of issuance of this order.

(6) The requirement that Midwestern serve North Star Wisconsin and North Star, as proposed, will not place any undue burden upon Midwestern nor impair its ability to render adequate service to its existing customers.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Com-

mission's order accompanying Opinion No. 331, issued October 31, 1959, in Docket No. G–18313 be further amended as hereinafter ordered.

The Commission orders:

(A) Midwestern Gas Transmission Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of North Star Wisconsin and North Star and to sell and deliver up to 142 Mcf of natural gas per day to North Star Wisconsin and to sell and deliver up to 296 Mcf of natural gas per day to North Star, all as hereinbefore described and as more fully set forth in the applications in Docket Nos. CP63–44 and CP63–45.

(B) North Star Wisconsin and North Star shall be prepared to receive natural gas from Midwestern within one year from the date of issuance of this order.

(C) Midwestern shall report to the Commission in writing the date of commencement of service to North Star Wisconsin and North Star within ten days thereof.

(D) The motion of Midwestern to amend further the Commission's order accompanying Opinion No. 331, issued October 31, 1959, in Docket No. G–18313, be and the same is granted and the present allocation of natural gas set forth therein is hereby revised in accordance with Exhibit A attached to Midwestern's motion. Accordingly, Midwestern is hereby authorized to sell natural gas to the following customers in the amounts stated:

	Contract demand (Mcf)
Argyle, Minnesota (Village of)	366
Frazee, Minnesota (Village of)	565
Hallock, Minnesota (Village of)	769
Hawley, Minnesota (Village of)	450
Lake Park, Minnesota (Village of)	355
Michigan Wisconsin Pipe Line Company	158,000
Montana-Dakota Utilities Company	2,500
New York Mills, Minnesota (Village of)	537
North Central Public Service Company	350
Northern States Power Company:	
Chippewa Falls	2,390
Dilworth	330
East Grand Forks	1,160
Eau Claire	7,200
Fargo	8,900
Grand Forks	5,310
Menomonie	1,680
Moorhead	2,560
Total Northern States Power Company	29,530
Perham, Minnesota (Village of)	600
Stephen, Minnesota (Village of)	405
United Petroleum Gas Company:	
Ada	600
Detroit Lakes	900
Total United Petroleum Gas Company	1,500

	Contract demand (Mcf)
Warren, Minnesota (City of)	818
American Gas Company of Wisconsin, Inc	3,500
Total contract demand	200,245
Fuel	2,056
Unallocated	1,699
Total supply	204,000

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63-65

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 6, 1963)

On September 17, 1962, as supplemented on September 19, 1962, Cities Service Gas Company (Applicant) filed in Docket No. CP63-65 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1963, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing area generally co-extensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $3,000,000 and no single project will exceed a cost of $500,000. The proposed facilities will be financed from treasury cash.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 20, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation, having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (A) and (E) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Cities Service Gas Company to construct during the calendar year 1963 the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Cities Service Gas Company.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the inde-

pendent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI63-867

ORDER DENYING APPLICATION FOR REHEARING

(Issued March 6, 1963)

On March 4, 1963, Pan American Petroleum Corporation (Pan American) filed an application for rehearing of the Commission's letter order of February 19, 1963, 29 FPC 378, which rejected Pan American's January 16, 1963, application for a certificate of public convenience and necessity and the related filing of its October 4, 1962, gas purchase contract with Colorado Interstate Gas Company as the proposed rate schedule because the contract contains pricing provisions other than those permitted by Section 154.93, as amended, of the Commission's Regulations under the Natural Gas Act (Act). No request for waiver has been filed pursuant to Section 1.7 of the Rules of Practice and Procedure.[1]

For each five-year period after October 1, 1983, the contract calls for "the establishment of the fair market price for the sale of gas hereunder * * *" by considering, among other things, prices in agreements "which at that time have been recently negotiated or renegotiated." It seems evident therefore, that Paragraph 5.1 of the contract would permit a price redetermination based upon producer rates which are then in issue in suspension or certificate proceedings—a procedure clearly prohibited by Section 154.93. Pan American does not contend that Paragraph 5.1 comes within Section 154.93 and apparently did not draft it in order to meet the requirements of the Section. In essence Pan American attacks Section 154.93 as amended by Commission orders Nos. 232, 232A and 242 (Issued March 3, 25 FPC 379, and 31, 1961, 25 FPC 609, and February 8, 1962, 27 FPC 339, respectively), as invalid because it is without reasonable basis in law and fact and goes beyond the powers granted to the Commission by the Act. However, Pan American presents no arguments that were not fully considered by the Commission when it issued the above mentioned orders.

The Commission finds:

The assignments of error and grounds for rehearing set forth in Pan American's application present no new facts or principles of law which were not considered by the Commission when it issued its letter order of February 19, 1963, or which having now been considered, warrant any change or modification of the order.

The Commission orders:

The application for rehearing filed by Pan American Petroleum Corporation on March 4, 1963, is hereby denied.

---

[1] Section 1.7 was amended and clarified by our Order No. 255 issued September 20, 1962, 28 FPC 500, 27 F.R. 9499.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TOWN OF JAMESTOWN, TENNESSEE, DOCKET NO. CP63-141

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 7, 1963)

On November 23, 1962, as supplemented on January 3, 1963, the Town of Jamestown, Tennessee (Applicant), filed in Docket No. CP63-141 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing East Tennessee Natural Gas Company (Respondent) to establish physical connection of its facilities with those which Applicant proposes to construct and operate and to sell and deliver natural gas to Applicant for resale and distribution in the Town of Jamestown and environs, all as more fully set forth in the application as supplemented.

Applicant proposes to construct and operate approximately 18.2 miles of 4-inch transmission line from the city gate to an interconnection with the main line of Respondent. Applicant will construct and operate a distribution system to serve consumers in Greater Jamestown and will also make sales directly from the lateral line in outlying areas.

Applicant estimates its natural gas requirements in Mcf for the first three years of operation to be as follows:

Year	Peak day	Annual
1	966	109,514
2	1,086	123,794
3	1,146	132,574

Applicant's facilities are estimated to cost $485,000, which will be financed by the issuance of $250,000 Natural Gas Revenue and Tax Deficiency Bonds and by a grant of $235,000 from the Housing and Home Finance Agency under the Public Works Acceleration Act.[1]

On December 17, 1962, Respondent filed an answer to the application and stated that it has the necessary pipeline capacity and is willing and able to render the requested service.

Notice of the application was issued on January 28, 1963, and published in the Federal Register on February 2, 1963 (28 FR 1084). No protest, request for hearing, or petition to intervene has been received.

The Commission finds:

(1) Applicant, Town of Jamestown, Tennessee, is a municipal corporation organized and existing under the laws of the State of Tennessee, and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in the Town of Jamestown, Tennessee, and environs.

(2) Respondent, East Tennessee Natural Gas Company, a Tennessee corporation having its principal place of business in Knoxville, Tennessee, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of February 2, 1948, in Docket No. G-889 (7 FPC 5).

(3) It is necessary and desirable in the public interest to direct East Tennessee Natural Gas Company to establish physical connection of its transmission

[1] 76 Stat. 541 (1962).

facilities with the facilities proposed to be constructed and operated by Applicant as hereinbefore described, all as more fully described in the application in this proceeding, and to sell and deliver to Applicant up to 1,146 Mcf of gas per day for resale and distribution in the Town of Jamestown and environs as hereinafter ordered.

(4) Applicant should commence taking gas from Respondent within one year from the date on which this order issues.

(5) The order hereinafter issued should be conditions upon Applicant's receiving a grant of $235,000 from the Housing and Home Finance Agency under the Public Works Acceleration Act for the construction of the proposed gas distribution system.

The Commission orders:

(A) East Tennessee Natural Gas Company be and it is hereby directed to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant as hereinbefore described, all a smore fully described in the application in this proceeding, together with such metering, regulating, and appurtenant facilities as may be required therefor, and to sell and deliver up to 1,146 Mcf of natural gas per day to Applicant pursuant to Respondent's appropriate rate schedules on file with the Commission.

(B) Applicant shall commence the purchase of gas as proposed herein within one year from the date on which this order issues.

(C) The order issued by paragraph (A) above is conditioned upon Applicant's receiving a grant of $235,000 from the Housing and Home Finance Agency under the Public Works Acceleration Act for the construction of the proposed gas distribution system.

(D) Respondent shall report to the Commission the date of commencement of service within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

SOUTHERN NATURAL GAS COMPANY, DOCKET NOS. G-20509 AND RP60-15

ORDER DENYING APPLICATION FOR REHEARING, GRANTING MOTION FOR STAY AND FOR LEAVE TO FILE SUBSTITUTE RATES

(Issued March 7, 1963)

On February 21, 1963, Southern Natural Gas Company (Southern), filed an application for rehearing of Opinion No. 379 and accompanying order, issued by the Commission on February 18, 1963, 29 FPC 323. Southern also moved for a stay of said order to the extent hereinafter specified and for leave to file substitute rates to be effective for the duration of the stay. The opinion and order, among other things, disallowed proposed increased rates which had become effective subject to refund on June 1, 1960, and on August 13, 1960, respectively, and directed that refunds be made and reduced rates be filed by Southern within 45 days thereafter.

Southern seeks rehearing only with respect to the Commission's inclusion in its rate of return computations of an allowance of 1.5 percent on accumulated deferred taxes. As noted in the opinion, the Commission in its orders issued July 8 and July 29, 1960, determining interim rate of return for Southern, reserved judgment on the disposition of this item until this phase of the proceeding.

In support of its application for rehearing, Southern again urges that the Commission's treatment of accumulated deferred taxes is erroneous because it disregarded a claimed Congressional intent of the pertinent provisions of the Internal Revenue Code to benefit the taxpayer, not the consumer; because the Commission's treatment is claimed to be contrary to the court's holdings in the two *Panhandle* cases[1]; because the Commission's treatment is claimed to depart from its prior determinations that natural gas companies are entitled to retain the benefit of such tax accumulations; and because it does not accord Southern the opportunity to earn a full 6.5 percent rate of return on its accumulated deferred tax accruals.[2] We have previously considered and rejected these and similar contentions made by Southern in these proceedings as well as in other proceedings in which we have made a similar return allowance on accumulated deferred taxes.[3] Therefore, we find no basis for granting rehearing.

Southern seeks a stay of our order, insofar as it reflects our treatment of accumulated deferred taxes as an element in our rate of return computations. In support thereof, it states that it intends to seek court review on this issue, and, assuming that it may prevail on the merits and obtain a reversal of our order, Southern asserts that it would be irreparably injured by having been required to make refunds which would then be difficult and expensive, if not impossible, to recover. Moreover, Southern asserts that its customers meanwhile will be adequately safeguarded by our refund requirements. In further support of its application for stay, Southern cites the pending litigation on this issue in the *Panhandle* case, *supra*.

Southern's application states that pending such stay, if granted, it will promptly make the rate reductions and refunds directed by our opinion and order excepting only that portion relating to the one issue as to which it intends to seek court review. For this purpose, Southern has appended to its application schedules which reflect a cost study which we have reviewed, and which include allocations and rates designed in accordance with the principles utilized in our opinion. These schedules reflect an increase in jurisdictional cost of service in the amount of $1,050,217 from the $96,854, 621 allowed by our opinion (Appendix B) to $97,904,838. As a result of the proposed increase in rate levels in the substitute rates Southern's schedules show that revenues, on the basis of test year sales, would be increased by $1,036,241 from $96,869,251 to $97,905,492.

Although some of the claims made by Southern in support of its request for stay are, in our opinion, not persuasive, we think that there are at least two considerations which warrant a stay. One is that the stay is sought only with respect to minor fractions of the refunds and rate reduction ordered. Hence, the stay requested will not deprive consumers of immediate benefits from the major portion of our order. Another consideration is that there is not in the present case any probability that the company will, upon some other branch of the case, subsequently be ordered to make other refunds and reduction in

---

[1] *City of Detroit, Michigan* v. *FPC*, 230 F. 2d 810 (1955), *certiorari* denied 352 U.S. 829 (1956), and *Panhandle Eastern Pipe Line Co.* v. *FPC*, Case No. 16479; on rehearing, FPC ruling affirmed, 316 F. 2d 659 (1963).

[2] Alternatively, Southern claims that it should be allowed at least 5.015 percent on accumulated deferred taxes, which percentage, they say, represents the rate of return which would be allowed on deferred tax accumulations if the Commission had utilized Southern's historical debt-equity ratio instead of an industry-wide average ratio.

[3] *Northern Natural Gas Co.*, Opinion No. 342. 25 FPC 431 (1961), *Kansas-Nebraska Natural Gas Co.*, Opinion No. 334, 25 FPC 448 (1961), *Alabama-Tennessee Natural Gas Co.*, Opinion No. 360, 27 FPC 1180 (1962), *El Paso Natural Gas Co.*, Opinion No. 366, 28 FPC 688 (1962), *Panhandle Eastern Pipe Line Co.*, order issued March 20, 1961, in Docket No. G–19780, 25 FPC 550.

its rates. Hence, if our order is not stayed, and on court review is set aside, there is no assurance that the company can set off its right of recovery against any such refunds and reduction. However, if the pending *Panhandle* case, *supra*, results in a final decision upholding the Commission, we feel it should then be incumbent upon the company to present its claim for continuance of the stay to the court.

Under the circumstances, it appears appropriate to grant a stay in this matter, but only until 30 days after issuance of the court's mandate in the pending *Panhandle* case, *supra*, on this issue.

The Commission finds:

(1) The assignments of error and grounds for rehearing set forth in the applications for rehearing filed herein present no new facts or principles of law which were not considered by the Commission when it issued Opinion No. 379, or which having now been considered warrant any change or modification of said opinion except as specified below.

(2) Good cause has been shown for granting Southern's motion for a stay, as described below, of the effectiveness of that portion of the provisions of the order accompanying Opinion No. 379, which relate to the treatment of accumulated deferred taxes in the computation of rate of return, and for granting Southern's motion to permit it to file substitute rates, set forth in Appendix B of the application, in lieu of those set forth in Appendix C of Opinion No. 379; to make appropriate refunds and to otherwise comply with the provisions of Opinion No. 379 and accompany order.

The Commission orders:

(A) Southern's application for rehearing of Opinion No. 379 as described above is hereby denied.

(B) Southern's motion for a stay of the effectiveness of Opinion No. 379 and order, only insofar as the order is based upon the inclusion of accumulated deferred taxes at 1.5 percent in the computation of rate of return, is hereby granted until 30 days after issuance of the court's mandate in the pending *Panhandle* case, *supra*, on this issue.

(C) Southern is hereby directed to file substitute rates in accordance with Appendix "B" of its application, which shall be made effective in lieu of the rates prescribed by Opinion No. 379, pursuant to the provisions of the opinion and order, except as to the rate of return issue above described; *provided, however*, that such substitute rates shall remain subject to the refund obligations of our order issued herein on July 29, 1960, insofar as they include an allowance for return reflecting the exclusion of accumulated deferred taxes in the rate of return computations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP63-145

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued March 7, 1963)

On November 27, 1962, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP63-145 an application pursuant to Section 7(b) of the Natural Gas Act for authority to abandon its Terre Haute Compressor Station (300 horsepower) and appurtenances located on its Terre Haute-Martinsville 6-inch pipeline located near Terre Haute, Indiana.

Applicant states that this Terre Haute Compressor facility has not been in operation since its Hymera-Bedford line was constructed and placed in service. The new facility provides a source of high pressure gas, which eliminates the need for the compressor facilities sought to be abandoned.

The station facilities are to be retired from service and sold for salvage, except the steel building which houses the compressor; it will be relocated and used at Applicant's Leesville Storage Field in Indiana.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 21, 1963 respecting the matters involved in and the issues presented by the application. No petition to intervene or protest to the granting of the application has been received. Staff Counsel moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a "natural-gas" company within the meaning of the Natural Gas Act, as stated in the application.

(2) There is no present need for the compressor station above described and no abandonment of service will result from its removal. Therefore, the public convenience and necessity does not require the continued maintenance and operation thereof.

(3) A request made during the public hearing by Staff Counsel for the omission of the intermediate decision procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record, and not having been denied by the Commission is granted pursuant to Section 1.30(c)(1) of the rules.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon the facilities heretofore described, as more fully described in the application.

(B) Applicant shall advise the Commission of the date of abandonment from service of the compressor station within ten days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NOS. G–13910 AND G–16791

ORDER GRANTING PETITION TO AMEND ORDER

(Issued March 8, 1963)

On January 28, 1963, Arkansas Louisiana Gas Company (Ark La), filed a petition in the above-entitled proceedings requesting the Commission to amend its order issued in these proceedings on December 12, 1962, 28 FPC 1005, so as to permit the increased rate to become effective as of July 30, 1962, rather than December 12, 1962, the date set forth in the subject order.

By orders issued December 13, 1957, and October 30, 1958, in Docket Nos. G–13910 and G–16791, respectively, the Commission suspended Ark La's proposed increases in rate for the sale of natural gas to Southwest Gas Producing Company, Inc. (Southwest), for the statutory five months period and thereafter until such further time as they are made effective in the manner prescribed by the Natural Gas Act. Ark La never moved to place the proposed increases in rate in effect

prior to its motion filed herein on July 30, 1962. By its motion of July 30, 1962, Ark La requested that the increased rate of 12.6855¢ per Mcf be made effective and that the subject proceedings be terminated. By order issued December 12, 1962, the subject proceedings were terminated and the increased rate was made effective as of December 12, 1962.

Upon consideration of the aforementioned petition and under the court ruling of *Associated Oil and Gas Company* v. *F.P.C.*, 280 F. 2d 31, that the proposed increased rate becomes effective upon the filing of a proper motion at the end of the suspension date, Ark La's motion filed on July 30, 1962, met the statutory provisions of placing the increased rate in effect as of that date. It is appropriate, therefore, that the order issued on December 12, 1962 be amended as hereinafter provided.

The Commission orders:

(A) Ordering paragraph (B) of the order issued December 12, 1962, in these proceedings is hereby changed to read as follows:

(B) Pursuant to Ark La's motion, the rate of 12.6855¢ per Mcf consisting of 11.3522¢ base price plus 1.3333¢ tax reimbursement is effective as of July 30, 1962, for the subject sale of natural gas.

(B) In all other respects, the order issued December 12, 1962, in these proceedings shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62-28; SHELL OIL COMPANY, DOCKET NO. CI62-53

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 8, 1963)

On August 2, 1961, as supplemented on December 13, 1961, El Paso Natural Gas Company (El Paso) filed in Docket No. CP62-28 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the operation of an existing 2.4 miles of 4½-inch field line necessary to purchase gas from Shell Oil Company (Shell) for resale in interstate commerce, all as more fully set forth in the application, as supplemented.

El Paso states that since May 28, 1958, it has been purchasing gas, produced in the Los Medanos Field, Eddy County, New Mexico, from Shell under short term contracts and transporting the gas through the subject field line and its existing Eunice-Carlsbad transmission line for resale in intrastate commerce. El Paso now proposes to transport this gas through the above-mentioned existing field line and its existing Eunice-Carlsbad transmission line for resale in interstate commerce.

The cost of constructing the subject line was $27,667. No additional markets are proposed to be served.

On July 18, 1961, as supplemented on September 4, 1962, Shell filed in Docket No. CI62-53 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to El Paso from the Los Medanos Field, all as more fully set forth in the application, as supplemented.

El Paso and Shell have entered into a gas sale contract, dated May 25, 1961, as amended on August 15, 1962 which provides for a total sales price, including tax reimbursement, of 15.55987¢ per Mcf (14.65 psai) and which further provides for a daily-contract-quantity of 1,000 Mcf of natural gas for each 8,000 Mcf of original recoverable reserves commencing with the first deliveries under the subject contract.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 26, 1963, respecting the matters involved in and the issues presented by the applications, as supplemented, in Docket Nos. CP62–28 and CI62–53. No petition to intervene or protest to the granting of the applications has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) Applicant, Shell Oil Company, an independent producer of natural gas, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption subject to the jurisdiction of the Commission and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The facilities to be operated by El Paso, as hereinbefore described and as more fully described in the application, as supplemented, in Docket No. CP62–28, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and operation thereof by El Paso is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sale of natural gas by Shell hereinbefore described, as more fully described in the application, as supplemented, in Docket No. CI62–53, will be made in interstate commerce, subject to the jurisdiction of the Commission, and such sale by Shell, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The sale of natural gas by Shell, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) The operation of the facilities proposed by El Paso is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(7) Shell and El Paso are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(8) Public convenience and necessity require that the certificate issued hereinafter to El Paso and the rights granted thereunder be conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(9) The gas contract, dated May 25, 1961, between Shell and El Paso, and the amendment thereto, dated August 15, 1962, should be accepted for filing as Shell Oil Company FPC Gas Rate Schedule No. 253 and Supplement No. 1 thereto, respectively, to become effective on the date of initial delivery.

(10) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to operate the facilities as hereinbefore described, all as more fully described in the application, as supplemented, in Docket No. CP62–28, upon the terms and conditions of this order.

(B) A certificate of public convenience and necessity be and the same is hereby issued upon the terms and conditions of this order, authorizing the sale by Shell Oil Company of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for the sale of natural gas in interstate commerce, to El Paso, as hereinbefore described and as more fully described in the application, as supplemented, in Docket No. CI62–53.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(D) The certificate issued to Shell in paragraph (B) above is not transferable and shall be effective only so long as Shell continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(E) The grant of the certificate issued in paragraph (B) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by, or against, Shell. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to El Paso imply approval of all of the terms of the contract, as amended, particularly as to the cessation of service upon termination of said contract, as amended, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sale of natural gas subject to said certificate.

(F) The gas contract, dated May 25, 1961, between Shell and El Paso, and the amendment thereto, dated August 15, 1962, is hereby accepted for filing as Shell Oil Company FPC Gas Rate Schedule No. 253 and Supplement No. 1 thereto, respectively, to become effective on the date of initial delivery.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MIDWESTERN GAS TRANSMISSION COMPANY AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP63-167

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 8, 1963)

On December 12, 1962, Midwestern Gas Transmission Company (Midwestern) and Texas Eastern Transmission Corporation (Texas Eastern) filed in Docket No. CP63-167 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of an emergency interconnection between the pipeline systems of the two companies and the exchange of the natural gas, all as more fully set forth in the application.

The proposed interconnection will be located at the point where Midwestern's 30-inch line crosses Texas Eastern's 24-inch line in Pike County, Indiana. The estimated cost of the proposed facilities is $7,700, to be financed from funds on hand.

An agreement between the Applicants, dated September 14, 1962, provides for the utilization of the proposed facilities when either company is confronted with an emergency which can be alleviated by the deliveries of natural gas from the other. Either party, upon request from the other, will make emergency deliveries of natural gas when possible without impairment of service obligations to others. All emergency deliveries will be made on gas-for-gas exchange basis.

Pursuant to due notice, a public hearing was held in Washington, D.C., on February 26, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Midwestern Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of May 12, 1959, in Docket No. G-16841 (21 FPC 653).

(2) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G-880 (6 FPC 148).

(3) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities and the exchange of natural gas by Applicants is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicants, Midwestern Gas Transmission Company and Texas Eastern Transmission Corporation, to construct and operate the proposed facilities and to exchange natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman, Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SUN OIL COMPANY, DOCKET NO. RI63–129; AREA RATE PROCEEDINGS, ET AL., DOCKET NO. AR61–2, ET AL.

ORDER PERMITTING SUBSTITUTION OF LESSER RATE UNDER SUSPENSION PROCEEDING, TERMINATING THE INDIVIDUAL HEARING PROCEDURE AND CONSOLIDATING SAID PROCEEDING WITH AREA RATE PROCEEDINGS

(Issued March 8, 1963)

On February 18, 1963, Sun Oil Company (Sun) filed a motion in Docket No. RI63–129 requesting that it be permitted to substitute a renegotiated rate of 23.675¢ per Mcf in lieu of a proposed 23.8333¢ [1] per Mcf periodic rate for its Jurisdictional sale of natural gas to Tennessee Gas Transmission Company (Tennessee Gas) from the Lower Mud Lake Field, Cameron Parish, Southern Louisiana. In its motion, Sun further requested that it be permitted to retain the present date of June 1, 1963, as the date that Sun may move to place the substituted rate in effect and that further proceedings in Docket No. RI63–129 be held in abeyance. No protest to Sun's motion has been filed.

---

[1] The 23.8333¢ per Mcf rate is designated as Supplement No. 3 to Sun Oil Company's FPC Gas Rate Schedule No. 119 and such rate is suspended until June 1, 1963, in Docket No. RI63–129.

Hearings were held before a presiding examiner commencing on January 14, 1963 and recessed on January 22, 1963 in the consolidated proceedings involving *Hunt Oil Company*, Docket No. RI63–128 and *Sun Oil Company*, Docket No. RI63–129, with the staff and Interveners resting in the *Sun* proceeding after the cross-examination of Sun's case-in-chief. By order issued February 11, 1963, 29 FPC 290, the Commission among other things, severed the *Sun* proceeding in Docket No. RI63–129 from the *Hunt* proceeding in Docket No. RI63–128, waived the intermediate decision in the *Sun* case, and established briefing dates.

It should be noted that the Commission has previously suspended 23.675¢ per Mcf rates for jurisdictional sales to Tennessee Gas in South Louisiana without setting such proceedings for immediate hearings. See: *Sun Oil Company*, Docket No. RI63–112, *Forest Oil Corporation (Operator), et al.*, Docket No. RI63–120, and *Sohio Petroleum Company*, Docket No. RI63–121.[2] While the proposed 23.8333¢ per Mcf rate would have a triggering impact of approximately $237,000 annually under the activation of favored-nation clauses for sales to Tennessee Gas, the proposed substitution rate will have no triggering impact, thereby eliminating the need for the immediate hearing procedure. Consequently, we believe that Sun should be permitted to make the substitute rate filing in Docket No. RI63–129, that the individual hearing in Docket No. RI63–129 should be terminated and that the lawfulness of the increased rate of 23.675¢ per Mcf should be determined in area rate proceedings by consolidation of Docket No. RI63–129 with the South Louisiana area rate proceedings in Docket No. AR61–2, *et al.* The record made in the separate hearing in Docket No. RI63–129 shall not be included in the record in Docket No. AR61–2.

The Commission orders:

(A) Sun is hereby permitted to withdraw its 23.8333¢ per Mcf rate in Docket No. RI63–129 and substitute therefor a rate of 23.675¢ per Mcf subject to the suspension proceeding in Docket No. RI63–129, and the substituted rate is hereby suspended in Docket No. RI63–129 until June 1, 1963 and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

(B) The individual hearing in Docket No. RI63–129 is hereby terminated and Docket No. RI63–129 is consolidated with Area Rate Proceeding, *et al.*, Docket No. AR61–2, *et al.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63–84

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 8, 1963)

On October 8, 1962, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP63–84 and application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction, installation and operation of approximately 43.5 miles of 36- and 30-inch pipeline loops, 50,100 additional compressor horsepower

---

[2] The Commission's action on the indicated docketed proceedings is contained under the lead docket *Sunset International Petroleum Corporation, et al.*, Docket No. RI63–107, *et al.*, order issued October 17, 1962 (not reported).

in existing main line stations, and miscellaneous appurtenant facilities, for the purpose of rendering additional natural gas service to meet the increased peak day requirements of 65,423 Mcf of natural gas at 14.73 psia for thirty of Applicant's existing resale customers as of November 1, 1963, on a firm basis, all as more fully set forth in the subject application.

The estimated over-all capital cost of the facilities proposed herein is $17,500,000 which will be financed initially through short-term bank loans. Permanent financing is to be accomplished through the issuance of long-term securities in conjunction with a future major financing program covering these and other proposed facilities.

No issue as to rates or gas supply is involved in this proceeding.

The application as filed also requested that the present allocation of 25,219 Mcf of natural gas per day to Applicant's customer Carolina Pipeline Company be reduced to 12,500 Mcf per day in accordance with a letter agreement dated February 28, 1962, between Applicant and Carolina Pipeline Company.

Due notice of this application setting hearing for 9:30 a.m. on February 25, 1963, was issued January 23, 1963, and published in the Federal Register on January 30, 1963 (28 F.R. 880).

A number of petitions to intervene and notices of intervention have been filed in this docket by various interested companies and State Commissions but in all cases, with two exceptions, petitioners expressly stated that they did not request formal hearing, that they did not object to the hearing and disposition of the application under the shortened procedure provided for by the Commission's Rules and that the respective filings were made to preserve the petitioners' right to appear and participate fully in the event that the application should be set for formal hearing.

The two exceptions referred to are the Notice of Intervention filed on February 7, 1963, by the South Carolina Public Service Commission, and the Petition for Leave to Intervene filed on February 15, 1963, by Peoples Natural Gas Company of South Carolina, both of which filings were directed to so much of the application in Docket No. CP63–84 as requested the reduction in the present allocation of natural gas to Carolina Pipeline Company hereinbefore referred to.

On February 15, 1963, Applicant filed an amendment to its original application in the subject docket eliminating so much thereof as requested the reduction in the allocation to Carolina Pipeline Company and stating that said request was being resubmitted as an application for amendment in Docket No. G–10000. A representative of the South Carolina Public Service Commission has stated informally that this amendment removed the objection of that Commission to granting of the application-in-chief and that said Commission would not, therefore, make an appearance at the hearing set for February 25, 1963.

Pursuant to the notice issued on January 23, 1963, a public hearing was held in Washington, D.C., at 9:30 a.m. on February 25, 1963, respecting the matters involved in and the issues presented by the application in Docket No. CP63–84, as amended by the filing of February 15, 1963. Appearances were entered on behalf of the Applicant, on behalf of Peoples Natural Gas Company of South Carolina, and on behalf of the Commission's staff. No protest to the granting of the application, as amended, having been received, and no other appearances having been entered, Applicant's counsel moved orally that the intermediate decision procedure be omitted and that the Commis-

sion render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

Inasmuch as the abridged hearing procedure is being used herein, no further action on the various intervention petitions and notices appears necessary.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principle place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 145).

(2) The facilities to be constructed by Applicant, as hereinbefore described and as more fully described in the application, as amended, in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, as integral parts of Applicant's existing pipeline system and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations. Applicant should be required to complete and place in actual operation the facilities hereinafter authorized within one year from the date on which this order issues.

(6) A request during the public hearing by Applicant's counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Transcontinental Gas Pipe Line Corporation to construct and operate the facilities hereinbefore described, all as more fully described in the application in Docket No. CP63–84, as amended, for the transportation and sale in natural gas in interstate commerce for resale as therein set forth, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations. Applicant shall complete and place in actual operation the facilities hereinabove authorized within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

APPALACHIAN POWER COMPANY, PROJECT NO. 2317

ORDER ISSUING PRELIMINARY PERMIT

(Issued March 11, 1963)

Application was filed on June 20, 1963, by Appalachian Power Company (Applicant), of Roanoke, Virginia, for a preliminary permit for twenty-four months under Section 4(f) of the Federal Power Act for proposed Project No. 2317 to be located on the New-Kanawha River, Grayson County, Virginia, and Allegheny County, North Carolina, in the vicinity of Independence, Fries, and Galax, Virginia.

As described in the application, the proposed project would be a pump-storage development comprising: *Upper Dam and Reservoir*—a dam (type of construction undetermined) to be located on the New-Kanawha River about 5 miles upstream from the mouth of Elk Creek, a reservoir with an area of 15,000 acres at full pool and a capacity of 960,000 acre-feet extending about 36 miles upstream, and a powerhouse; and *Lower Dam and Reservoir*—a dam (type of construction undetermined) to be located about 12 miles downstream from the Upper Dam, a reservoir with an area of 2,000 acres at full pool and a capacity of 60,000 acre-feet extending to the Upper Dam, and a powerhouse. The powerhouse will be located near each dam, will be supplied with water by means of tunnels or penstocks, and will have a combined installation of about 400,000 kilowatts.

From Point Pleasant, West Virginia, the mouth of the New-Kanawha River, to the junction of the North and South Forks of the New River in North Carolina, is a distance of 352 river miles. The South Fork rises about eighty-five miles south of this junction. In 1900 congressional authorization was required to dam the New River in the vicinity of the proposed lower dam at Fries, Virginia (river mile 304), and a consent was given by special statute. 31 Stat. 264 (1900). Prior to that time Congress had appropriated funds for improvement of navigation on the New-Kanawha from the mouth of Wilson Creek, Virginia (river mile 346) to the mouth of the Greenbrier River. For example, in the River and Harbor Act of 1880 (21 Stat. 180, 185) $24,000 was appropriated for this purpose. The New-Kanawha River has also been improved for navigation downstream from the mouth of the Greenbrier. See *United States* v. *West Virginia Power Co.*, 122 F. 2d 733 (CA4), *cert.* denied 341 U.S. 683.

The Department of the Army, reporting on the application, stated that the proposed development would pre-empt the site of the Moores Ferry project, part of a general comprehensive plan for flood control and other purposes in the Ohio Basin, approved by the Congress in the Flood Control Act of 1938. It was recommended in the report that in the event a license was ultimately issued it should "provide the same functions as would be provided in the authorized Federal project and the operation of any such development should be fully coordinated with existing developments in the basin to assure the maximum public benefits".

The Department of the Interior, in reporting on the application, stated that the Commission lacks jurisdiction to issue a preliminary permit for the proposed project since the Moores Ferry site was authorized for Federal construction under the Flood Control Act of 1938. The North Carolina Electric Membership

Corporation, in a petition to intervene, also questions the jurisdiction of the Commission to issue a preliminary permit. The Department of the Interior further stated that should a preliminary permit be issued, it should include special conditions in the interests of fish and wildlife, mineral resources and archeological salvage.

The Flood Control Act of 1938 (52 Stat. 1215, 1218) approved a general comprehensive plan for flood control and other purposes in the Ohio River Basin which had been submitted by the Chief of Engineers in 1937. The statute incorporated by reference the report of the Chief of Engineers, which recommended the erection of a system of flood-control reservoirs on the tributaries of the Ohio River. Chief of Engineers, *Comprehensive Plan for Ohio and Lower Mississippi Rivers*, H.R. Flood Control Doc. No. 1, 75th Cong. 1st Sess. (1937). The Moores Ferry site was added to the list by the Chief of Engineers in his 1941 Annual Report.

Under the Flood Control Act of 1938 a flood-control project, which is a unit of the approved plan, is authorized for Federal development when it is "selected and approved" for construction by the Chief of Engineers. To it Congress then allocates portions of lump sum appropriations authorized by the Act. Summersville Reservior, now being built on a tributary of the New-Kanawha, illustrates the process of selection and approval by the Chief of Engineers. After preliminary surveys and plans had been completed, the Summersville project was selected for construction "under the general authorization for the Ohio River Basin". 1960 Chief of Engineers Ann. Rep. pt. 2, at 1082; *id.* (1956) at 1101.

As the Flood Control Act of 1938 does not authorize the selection of projects for power development and purposes other than flood control, application was made by the Chief of Engineers to the House Committee on Public Works for authority to study Moores' Ferry on an *ad hoc* basis as a multiple-purpose project. The Committee's resolution of August 5, 1961 authorized study of the advisability of erecting at Moores Ferry a "multiple-purpose reservoir * * * for flood control, hydro-electric power, recreation, low flow regulation for pollution abatement and water supply, and other allied water uses."

In accordance with the above resolution, the Corps of Engineers expended $35,000 from funds previously allocated for general investigations in the Ohio Basin during fiscal year 1962. The expenditure was reported to the Appropriations Subcommittee of the House in the course of hearings on public works appropriations for 1963. In support of expanded study, the Ohio River Division Engineer testified that "The original study on Moores Ferry showed that the benefits were not adequate as against the costs for the Moores Ferry Reservoir." Hearings before the Subcommittee of the House Committee on Appropriations, 87th Cong., 1st Sess., pt. 1, at 228–9, 232, 234 (1962). Request was made for an additional $75,000 to be included in the "general investigations" appropriation. Id. at 232.

The House Committee deleted the latter amount requested for study of Moores Ferry. Hearings before the Subcommittee of the Senate Committee on Appropriations, 87th Cong., 1st Sess., pt. 2, at 2939 (1962). In its report accompanying the Public Works Appropriations Act, 1963, the House Committee on Appropriations, speaking in general of its recommended reduction in the amount to be spent for civil works investigations, said: "The Committee is not convinced of the need for expansion of the research work being done under this heading." H.R. Rep. No. 2223, 87th Cong., 2d Sess. 13 (1962).

It thus appears that the Moores Ferry project has not been selected and approved by the Chief of Engineers for construction under the Flood Control

Act of 1938. Instead the Corps of Engineers proposes to compare the project with a multiple-purpose project not included in the Act, and funds for this purpose have not been made available. In any event, under the resolution permitting this study, Moores Ferry is a specific project, disassociated from the authorization process applicable to units in the comprehensive flood control plan. As the language of the resolution indicates, ultimate authorization, if any, would entail a basic change by Congress in the comprehensive plan it previously approved in the Flood Control Act of 1938.

Although Moores Ferry is a unit in a comprehensive flood control plan approved by Congress, it has not been "selected and approved" for development by the United States. On familiar principles, congressional approval of a general comprehensive plan for the development of a river basin does not, without more, authorize the development of a particular site. [U.S. *ex rel Chapman* v. *F.P.C.*, 345 U.S. 154.]

No construction is authorized under a preliminary permit, nor does such a permit grant a right to a license. Such a permit only gives the permittee, during the period of the permit, the right of priority of application for license while the permittee undertakes the necessary studies and examinations required by Section 9 of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit. Expenditures made by a permittee for studies and examinations under a preliminary permit are entirely at the permittee's risk that the project may prove to be economically infeasible, that the Commission may determine that its plan is not best adapted to a comprehensive development of the water resources or that the Commission in its judgment may determine that the development of the water resources for public purposes should be undertaken by the United States itself. The circumstances of this case make the foregoing caution of special significance.

As pointed out, the proposed project would be a pumped storage development. Its exact location and design would be the subject of study during the period of the preliminary permit. Until such studies are completed, it is not possible to accurately assess the effect of the proposed project on the use of the waters involved for public purposes. In such circumstances, the apparent policy of the Federal Power Act would indicate that a preliminary permit should be issued to maintain priority of application for a license to the permittee who undertakes such studies in the event non-federal development of the project is later authorized.

The Commission finds:

(1) The applicant is a corporation organized under the laws of the Commonwealth of Virginia and is qualified to do business in the States of West Virginia and Tennessee.

(2) The New-Kanawha River, from its mouth at Point Pleasant, West Virginia, at least as far upstream as the confluence of its North and South Forks in North Carolina, is a navigable water of the United States.

(3) The project will be located on a navigable water of the United States.

(4) Public notice of the application has been given as required by the Act. No conflicting application is before the Commission.

(5) The proposed project would have an effect, by regulation of the flows of the New-Kanawha River, on the constructed Government Bluestone Reservoir, located about 160 miles downstream.

The Commission orders:

(A) This preliminary permit is issued to Appalachian Power Company (hereinafter referred to as the Permittee) for a period of 24 months, effective as of March 1, 1963, for the sole purpose of maintaining priority of application for a license for Project No. 2317, affecting navigable waters of the United States, subject to the terms and conditions of the Federal Power Act which is hereby incorporated by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) This permit is also subject to the terms and conditions set forth in Form P–1, entitled "Terms and Conditions of Preliminary Permit" (16 FPC 1303), which terms and conditions (designated as Articles 1 through 8) are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each six-month period from the effective date of this permit to the Regional Engineer, Federal Power Commission, New York, New York, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.

Article 10. The Permittee shall, during the period of the permit, cooperate with and consult with the District Engineer, Corps of Engineers, Huntington, West Virginia, in developing a plan for the development of the water resources of the area consistent with proposed and existing developments in the New River basin to assure maximum public benefits.

Article 11. The Permittee shall, during the period of the permit, cooperate with the U.S. Fish and Wildlife Service, the Virginia Commission of Game and Inland Fisheries and the North Carolina Wildlife Resources Commission for the purpose of planning and designing adequate conservation measures to mitigate and compensate for the loss of or damage to existing fish and wildlife resources and to develop and improve these resources where practicable.

Article 12. The Permittee shall consult with the Director, Bureau of American Ethnology, Smithsonian Institute, Washington 25, D.C., concerning the cost of archeological surveys and salvage, if any, in the area to be inundated by the proposed reservoirs.

Article 13. The Permittee shall consult with the U.S. Bureau of Mines as to mineral recovery which may be necessary in the area to be inundated by the proposed reservoirs.

Article 14. The Permittee shall for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgment of the acceptance of this preliminary permit, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-4

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 11, 1963)

On July 5, 1962, Northern Natural Gas Company (Applicant) filed in Docket No. CP63-4 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities to enable Applicant to take into its certificated pipeline system supplies of natural gas which will be purchased from producers thereof in the Hunt-Baggett Field in Crockett County, Texas, all as more fully set forth in the application.

Applicant proposes to construct and operate approximately 47.7 miles of pipeline, measurement facilities, and a dehydration plant. The total cost of the proposed facilities is estimated to be $1,408,900, which will be financed from funds on hand and cash generated from operations.

Applicant estimates that there are approximately 78,045 MMcf of gas at 14.73 psia dedicated to it in the Hunt-Baggett Field, which Applicant proposes to purchase at an initial price of 16 cents per Mcf. The application states that these volumes of gas will further supplement Applicant's total gas supply but will not result in any increase in Applicant's system salable capacity.

Pursuant to due notice, a public hearing was held in Washington D.C., on February 27, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) Public convenience and necessity require that the certificate issued hereinafter should be conditioned upon the issuance to and acceptance by the producers of their related certificate authorizations to sell gas to Applicant.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The certificate issued by paragraph (A) above is conditioned upon the issuance to and acceptance by the producers of their related certificate authorizations to sell gas to Applicant.

(D) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (B) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP61-132

ORDER DENYING APPLICATION FOR REHEARING

(Issued March 12, 1963)

On January 14, 1963, Mid-American Pipeline Company, an intervenor in the above-entitled case, applied for rehearing of the Commission's opinion and order issued on December 28, 1962, 28 FPC 1155. The majority of points raised in Mid-America's rehearing application are merely restatements of arguments raised in its exceptions which have been covered in our opinion and order and which do not warrant further discussion here. We direct our attention to the remaining arguments.

Mid-America urges that our order is invalid insofar as it is based on the conclusion that the extraction plant facility at Bushton is non-jurisdictional. Our treatment of this facility as non-jurisdictional is based on a prior order in this docket to that effect where full consideration was given to the question. *Northern Natural Gas Company*, Docket No. CP61-132, 25 FPC 1205, rehearing denied, 26 FPC 418 (1961). Mid-America has presented no arguments which would alter our earlier conclusion.

Mid-America objects to our alleged failure to find a public need for the non-jurisdictional extraction plant and proposed pipeline, contending that this precluded a finding of a public need for the jurisdictional facilities which we certificated. We concluded and here reaffirm that the proposed facilities are required by the public convenience and necessity within the meaning of Section 7 of the Natural Gas Act because they provide, without cost to Northern's jurisdictional customers and without impairing Northern's continuing ability to serve such customers, an additional use for this wasting natural resource. We

reach this conclusion in conjunction with our findings that Northern's 20-year contract with Products Company adequately demonstrates that the expenditures it will make for the facilities will not be financially imprudent, and that the condition in the certificate requiring a price reduction to Northern's jurisdictional customers constitutes a reasonable provision to ensure that in every respect they will occupy at least as good a position after the Products Company commences operations as before. We reiterate our view that the standard of Section 7 does not require us to determine whether there is a need for the products of the customer to be served by proposed facilities any more than we would be required to determine whether there is a "public need" for the products of a steel or cement plant to whom Northern might wish to construct facilities to serve. Moreover, as an alternative ground, we explicitly reviewed the relevant materials and concluded that, assuming *arguendo* the relevancy of those issues, the record supports the examiner's conclusion that there is a market for the Products Company LPG's and that its operation is economically feasible.

Mid-America objects to our considering the relationship of the proposed facilities to Northern's helium extraction operation, arguing that the matter was not developed in the record. It is true that the exact nature of Northern's helium production and the amount of LPG's extracted incidental thereto are not shown by the record. However, it is clear from the record and argument before the Commission that the purpose and effect of Northern's proposal is to increase the amount of natural gas at the Bushton location and to strip the liquids therefrom. It was acknowledged by Mid-America that the stripping process is a prerequisite to the removal of helium from the gas stream. Therefore, one result of Northern's proposal will be that increased amounts of natural gas in the condition necessary for helium removal will be available at Northern's helium extraction plant if needed for defense or scientific purposes. As our opinion makes clear, however, we found that the Northern application completely satisfied the minimal conventional elements necessary for a certificate, apart from the helium factor which was merely an additional consideration.

Mid-America also raises objections relating to alleged pre-emption of Northern's transmission capacity. We found that the price reduction to Northern's jurisdictional customers not only included costs representing Products Company's use of Northern's jurisdictional facilities but also reimbursed Northern's jurisdictional customers, through rate reductions, in the amount of one million dollars per year for the alleged loss of cheap expandibility. We find that this disposition of the question of compensation for pipeline capacity satisfies the requirements of public convenience and necessity. In this regard we note that because the amount and cost of future expansion of Northern's pipeline capacity is totally unknown at this time, we do not attempt to allocate conclusively a cost thereof to the extraction operation. Rather, we find that his substantial reduction in rates is a satisfactory interim compensation for any loss of cheap expandibility until such loss can be more accurately measured.

Another objection by Mid-America relates to the effect of this proposal on Northern's reserves. Mid-America does not repeat its objection that the proposed project will render Northern's reserves inadequate. Rather, it argues that operation of the extraction plant will consume a portion of Northern's low costs reserves which will have to be replaced with higher cost reserves, resulting in increased costs to Northern's jurisdictional customers. This is a certificate case, not a rate case, and there is no attempt here to charge jurisdictional customers with the cost of higher priced gas. The Commission will of course determine the extent to which Northern's cost of gas should be allocated to extraction plant operations in any future rate proceeding involving Northern.

Mid-America protests also our suggestion that objections to the sufficiency of an applicant's evidence are more properly made at the hearing itself where they can be immediately corrected than on appeal to the Commission. This statement correctly reflects our views and was intended for the benefit of parties in future proceedings. It did not, however, detract from our specific finding that the record before us in this case was entirely adequate for the purposes of or opinion, where cost allocations were used only to determine the appropriateness of the Settlement Agreement.

Mid-America's final objection relates to our conditioning Northern's certificate to require the rate reductions agreed to by Northern and its utility customers in the Settlement Agreement. At the outset we emphasize the posture of the case before us. We are not at this time determining the just and reasonable rates to Northern's customers nor the proper allocation of costs to the Products Company operation. Rather, we have before us an application for a certificate under Section 7 in which it is our duty to determine whether the over-all terms of the certificate are required by the public convenience and necessity. Insofar as this test concerns rates, it is necessarily more circumscribed than a determination of just and reasonable rates under Section 4 or 5. In concluding that the provisions for rate adjustments in the Settlement Agreement are required by the public convenience and necessity, we noted that they were based on the cost allocation method approved by the examiner which we found to be reasonable, upon an average Btu content which we found to be fully supported by the record, and upon a further reduction of 5.5 cents per Mcf in the demand charge to compensate in an amount of approximately one million dollars annually the customers of Northern for alleged pre-emption of cheap expandibility, which we also found to be reasonable. We determined that this reduction translated into a unit cost allocable to Products Company of 65.79 cents. We further found the comparable cost proposed by Mid-America of $1.007 was based on an improper method of Btu allocation and that its alternate proposal of 66.6 cents was based on an erroneous assumption as to deliveries on peak days to Northern's customers. On the basis of all of these findings, we concluded and here reaffirm that the settlement figure constitutes a reasonable provision, supported by the record, to ensure that Northern's utility customers would occupy at least as good a position after Products Company commences operations as before, and therefore this element of the application satisfied the requirements of the public convenience and necessity.

The Commission orders:

The application for rehearing is denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2071

ORDER APPROVING REVISED AND SUPPLEMENTAL PROJECT EXHIBITS

(Issued March 12, 1963)

On May 22, 1962, Pacific Power & Light Company, licensee for major Project No. 2071 [issued April 24, 1951; 10 FPC 917], filed for Commission approval a revised Exhibit K and a supplemental Exhibit L.

Commission approval of the exhibits would incorporate within the project boundary a low diversion dam and weir on Speelyai Creek, tributary to Lewis River, on which the project is located, and a canal 4,000 feet long extending from the weir to Yale Reservoir. A 24-inch diameter pipe through the dam permits

15 cfs of water to flow down Speelyai Creek to be utilized in anadromous fish rearing ponds. Flows in excess of 15 cfs are diverted to Yale Reservoir.

The dam is an earth-fill structure 950 feet long with a crest approximately 15 feet above streambed. A staff analysis of the theoretical stability of the structure shows that the structure is well within reasonable limits for safety. An additional staff analysis shows that the capacity of the concrete diversion weir is about 12 times that required to pass the flood of record.

The dam and other facilities, plus a fish hatchery downstream on Speelyai Creek, were constructed in 1959 under a "Memorandum of Agreement" among the licensee, Public Utility District No. 1 of Cowlitz County, and the Department of Fisheries of the State of Washington for the purpose of making Speelyai Creek suitable for use in connection with the fish protection and conservation program undertaken by the three parties to the agreement. The licensee states that the average net flow diverted into Yale Reservoir represents an additional value in average annual energy from Yale powerhouse sufficient to balance the annual cost of the facilities to the parties to the aforementioned agreement.

The Department of the Interior has advised that its studies show that the diversion of flood waters in excess of 15 cfs has had no adverse effect on fish resources and that the anadromous fish reared through the release of 15 cfs from the dam are making a contribution to sport and commercial fishing. No additional conditions in the interest of fish and wildlife resources were recommended for inclusion in the license for the project.

While our approval of the revised Exhibit K would add 35.72 acres of land to the project, no lands of the United States are involved.

The Commission finds:

Revised Exhibit K, Sheet 4 (FPC No. 2071–41) and supplemental Exhibit L, Sheet 8 (FPC No. 2071–40) conform to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit K, Sheet 4 (FPC No. 2071–34), now part of the license and which has been superseded, should be eliminated from the license.

The Commission orders:

(A) The exhibits described in the above finding as conforming to the Commission's rules and regulations are hereby approved as part of the license for Project No. 2071, and the exhibit described in the same finding as being superseded is hereby eliminated from the license for the project.

(B) Subparagraph (b) on page 918 of the license for Project No. 2071 is modified by adding after the words "near Merwin plant," appearing in line 10 of the subparagraph, the following: "a low earth-fill diversion dam and concrete overflow weir on Speelyai Creek and a 4,000-foot long unlined canal extending from the diversion dam to Yale Reservoir;".

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PETROLEUM OFFSHORE LEASEHOLDS, INC. (OPERATOR), ET AL., DOCKET NO. G–19010

ORDER APPROVING PROPOSED SETTLEMENT AND CONDITIONALLY ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 12, 1963)

On July 20, 1959, Petroleum Offshore Leaseholds, Inc. (Operator) *et al.* (Offshore), filed in Docket No. G–19010 an application for a certificate of public

convenience and necessity pursuant to Section 7 of the Natural Gas Act as successor in interest to Phillips Petroleum Company (Phillips) to sell gas to Transcontinental Gas Pipe Line Company (Transco).[1] Said gas is produced from blocks 172 and 184, Eugene Island Area, approximately 42 miles off the southern coast of Louisiana. On April 28, 1960, Offshore was granted temporary authority to sell the gas to Transco as proposed, subject to the condition that Offshore refund to Transco any amounts collected in excess of the amount resulting from the rate finally determined to be proper in Docket No. G–19010. Offshore filed its acceptance of temporary authority and the sale commenced thereunder.

On October 8, 1962, Offshore filed a petition for the issuance of an order granting a permanent certificate of public convenience and necessity in accordance with its application as modified by a settlement agreement. No party has opposed this proposal.

Under the terms of the settlement agreement, commencing July 1, 1962, the rate charged for natural gas under Offshore's Rate Schedule No. 1 shall be 19.0¢ per Mcf subject to possible change, as therein provided. Offshore agrees that no rate change shall be filed prior to July 1, 1967. As to offshore production not subject to the taxing authority of the State of Louisiana, Offshore shall be entitled, during the moratorium period, to file a rate increase in an amount equal to half of the amount of any tax which may be imposed by the United States Government. If the offshore production is held to be subject to the taxing authority of the State of Louisiana, the price for which Offshore may file during the moratorium shall be 20.625¢ per Mcf inclusive of tax reimbursement, effective as of the date of the initial payment of such tax but not earlier than the date of filing of the rate increase. The prices fixed in the settlement agreement are subject to change and revision upward or downward as the result of any final determination prescribing a rate or rates applicable to the gas subject to the agreement in Docket No. AR61–2 or other applicable area rate proceedings, from the date of such determination.

Offshore shall refund to Transco the difference between the amount per Mcf actually collected for gas delivered under its Rate Schedule No. 1 and the settlement price of 19.0¢ multiplied by the volumes delivered in June 1962, and in each successive prior month until a dollar amount has been compiled which is equal to ⅔ of the difference between the amount paid to Offshore by Transco for gas delivered from the date of initial delivery and the amount that would have been due had a rate of 19.0¢ prevailed during the entire period. Interest shall be paid at a rate of 7% per annum. No interest shall accrue after July 1, 1962.

Transco shall have the right to make up gas paid for but not taken over a four year period in lieu of the two year period provided for in the contract for sale comprising Offshore's Rate Schedule No. 1.

The settlement agreement further provided that none of the parties agreeing thereto would be prejudiced in any position taken in any other proceeding.

By letter dated November 6, 1962, Offshore stated that amounts collected in excess of the settlement price with respect to deliveries made on or after July 1, 1962, will be refunded, without interest, at the same time and in addition to the dollar amounts of principal and interest expressly provided to be refunded in the settlement proposal.

The proposal makes provision for the outcome of Area Rate Proceeding AR61–2. It recognized that our final order in that proceeding may require a downward adjustment in the settlement price, and it also permits upward ad-

[1] Phillips had theretofore been granted a certificate of public convenience and necessity to make these sales in Docket No. G–14244,

justment in price, prior to July 1, 1967, according to any specifically applicable area rate or rates ultimately determined in that proceeding. Although the settlement seeks to anticipate in part the nature of our final determinations in Docket No. AR61–2, our definitive interpretation of "specifically applicable area rate" will obviously have to await conclusion of the area proceeding. The settlement also provides that adjustment in price growing out of the Area Rate Proceeding should go into effect upon conclusion of judicial review of our final order. However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that area rate proceeding and our approval of this settlement will be so conditioned. We find no reason to toll the accrual of interest, as noted by Offshore in its letter of November 6, 1962, and shall require the payment of interest through October 31, 1962, the last day of the month in which the settlement proposal was submitted.

The Commission finds:

(1) Petroleum Offshore Leaseholds, Inc. (Operator), *et al.*, is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sale of natural gas is subject to the jurisdiction of the Commission, and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Offshore is able and willing properly to do the act and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and a certificate should be issued as ordered below.

(5) The conditions attached to the certificate herein issued are required by the public convenience and necessity.

(6) No party has opposed waiver of intermediate decision in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decision procedure is granted.

(B) A certificate of public convenience and necessity is hereby issued upon the conditions set forth herein to Petroleum Offshore Leaseholds, Inc. (Operator), *et al.*, for the sale of natural gas in interstate commerce for resale as proposed, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Offshore's application.

(C) The certificate issued by paragraph (B) above, is granted upon the express condition that Offshore comply fully with the terms of the settlement proposal referred to above and which was entered into evidence in this proceeding, which settlement is expressly approved, except that interest shall be paid through October 31, 1962, the last day of the month in which the settlement proposal was submitted.

(D) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal, Offshore shall report to the Commission, in writing and under oath, the amount of the refunds made to Transcontinental Gas Pipe Line Company, showing separately the amount of

principal and interest so paid and the basis used for such determination, together with a release from Transco showing receipt of the refunds in conformity to the settlement as approved.

(E) Upon full compliance of Offshore with all the terms of this order and of the settlement proposal, Offshore shall be relieved of any further refund obligations in this proceeding and said proceeding shall terminate.

(F) The certificate herein issued is not transferable and shall be effective only so long as Offshore continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable sales, regulations and orders of the Commission.

(G) The grant of the certificate herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder; *provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(H) The grant of the certificate herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Offshore, particularly any proceeding under Section 5 of the Natural Gas Act or Section 5(c) of the Outer Continental Shelf Lands Act, and is without prejudice to claims or contentions which may be made by the Commission, Offshore, the Commission staff, or any affected party herein in any other proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED FUEL GAS COMPANY, AMERE GAS UTILITIES COMPANY, AND ATLANTIC SEABOARD CORPORATION, DOCKET NO. CP61–107

ORDER DENYING APPLICATION FOR REHEARING

(Issued March 12, 1963)

On February 15, 1963, Lynchburg Gas Company filed an application for rehearing of the Commission's Opinion and Order No. 377 issued January 16, 1963, 29 FPC 90. Lynchburg alleges that the Commission erred in its approval of the transfer of Boldman Compressor Station to United, that it again erred in authorizing the merger of Amere into United and, finally, that it erred for yet a third time in approving the transfer of Atlantic's KA and KB transmission facilities in Kentucky and southern West Virginia. Lynchburg requests that upon due reconsideration of our opinion, we vacate the order as therein issued and enter an order denying the proposed transfers of ownership as not being required by the public convenience and necessity.

We have considered the assignments of error and the grounds for rehearing set forth in the application and have reconsidered our Opinion No. 377. The arguments advanced here by Lynchburg are similar, if not identical, with those advanced by it and other interveners in their briefs before the examiner and rejected by us in the opinion. Except for substituting the word "by" in place of the word "for" in line 2 of finding No. 7, which change is made solely to conform the finding to the terminology of Section 7(e) of the Natural Gas Act and does not otherwise alter the import or effect of the finding as therein stated, all points raised in the application have already been discussed in the opinion. Our conclusions as to these matters remain unchanged. No new facts or arguments

are called to our attention which would be cause for granting rehearing or disturbing the original opinion and order.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the application present no facts or principles of law which were not fully considered by the Commission when it issued its Opinion No. 377 and order or which, having now been considered, warrant any change in, modification, or rehearing of such Opinion and Order, except as specified below.

The Commission orders:

(A) The word "by" is hereby substituted for the word "for" in line 2 of finding No. 7.

(B) The application for rehearing filed by Lynchburg Gas Company on February 15, 1963, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

UNITED STATES DEPARTMENT OF THE INTERIOR, BUREAU OF RECLAMATION; FALCON DAM PROJECT, DOCKET NO. E-6577

ORDER CONFIRMING AND APPROVING RATES AND CHARGES

(Issued March 12, 1963)

On January 17, 1963, the Bureau of Reclamation, Department of the Interior (Reclamation), filed for confirmation and approval by the Federal Power Commission, pursuant to the provisions of the Act of Congress, dated June 18, 1954 (68 Stat. 255), wholesale power rates in a proposed contract between the United States and the Central Power and Light Company for the sale of all of the United States' share of electric energy not otherwise required in the operation of the international project, which is generated at the Falcon Dam, located on the Rio Grande River on the international boundary between the United States and Mexico.

The proposed rates and charges as set forth in the contract are as follows:

Section 7

The contractor shall pay for the electric service furnished hereunder in accordance with the following rate schedule, charges, and conditions: 4.0 mills per kilowatt-hour for energy delivered between the hours of 8 a.m. and 10 p.m. (Saturdays and Sundays excepted); and 1.75 mills for energy delivered at any other time.

The annual aggregate of the monthly charges shall not exceed $300,000 for the first 100,000,000 kilowatt-hours which are delivered to the Contractor during any calendar year.

All energy delivered in excess of 100,000,000 kilowatt-hours during any calendar year shall be at a rate of 1.0 mill per kilowatt-hour.

Section 10

At times when electric power and energy is not available from the international project for operations of project facilities, the Contractor shall deliver to the United States for the operation of said project facilities such energy as the United States may require for that purpose. Such energy shall be returned by the United States to the Contractor kilowatt-hour for kilowatt-hour at times

and rates of delivery to be mutually agreed upon by the parties hereto. It is the intent of said parties that interchange energy shall be returned as promptly as circumstances permit.

The parties hereto further agree that the Contractor may demand and receive payment from the United States adequate to balance the interchange energy account under any or all of the following conditions:

1. Upon termination of the contract;

2. By mutual agreement of the parties hereto at any time during the term hereof; or,

3. When the interchange energy account remains unbalanced for a period of one year.

Settlement of the interchange energy account by payment shall be at a net value of 3.0 mills per kilowatt-hour for all energy which may remain as a credit to the Contractor in the interchange energy account.

The Falcon Dam was constructed by the International Boundary and Water Commission of the United States and Mexico as a multi-purpose project for conservation and generation of power. The power generated at the project, pursuant to arrangements by treaty, is equally divided between the United States and Mexico. The rates in the proposed contract are applicable to the United States' share of saleable power generated at the project. The International Boundary and Water Commission had originally estimated that the United States' share of saleable capacity and energy was 20,000 kw of peaking capacity and 120,000,0000 kwh of nonfirm energy, of which approximately 100,000,000 kwh was to be considered as associated with the peaking capacity and approximately 20,000,000 kwh was dump energy. Since that time, Reclamation has reported that the sale of peaking capacity has proved to be incompatible with actual project operations. This is due to the fact that water releases from the Falcon reservoir are controlled entirely by irrigation and other downstream requirements. There are times when no power can be generated, so that project has no dependable capacity. For example, during the years 1958, 1959 and 1960 there was no power available for a total of 61, 20, and 60 days respectively. In other words, although the economic feasibility of the power portion of the project was based upon the sale of capacity and associated energy, as well as some nonfirm energy, due to the present state of the project, only energy of a quality not susceptible to sale as firm energy is available.

From the beginning of power operations in 1954 until December 28, 1956, Falcon power was sold under a temporary flat rate of 2.7 mills per kilowatt-hour. On December 28, 1956, the Commission approved wholesale power rate schedules R5–S2 and R5–S3 for a five-year period. On January 3, 1962, the Commission extended its approval of these rate schedules for a period ending December 31, 1962. Rate Schedule R5–S2, in brief, provides for the sale of peaking capacity at the rate of $15.00 per kilowatt-year of billing demand, and an energy charge of 1.75 mills per kilowatt-hour for the first 400 kilowatt-hours per kilowatt of monthly billing demand and the balance of energy at 1.0 mill per kilowatt-hour. Rate schedule R5–S3 provides for the sale of dump energy at a rate of 1.75 mills per kilowatt-hour for all dump energy delivered between the hours of 8 a.m. and 10 p.m. of any day except Saturdays and Sundays and a rate of 1.0 mill per kilowatt-hour for all dump energy delivered during other hours.

As explained above, the sale of peaking capacity under R5–S2 has proved to be incompatible with actual project operations. For this reason, on December 15, 1961, Reclamation requested approval of a new rate schedule for a five-year period. The proposed rate schedule provided for rates of 5.5 mills

per kilowatt-hour for peaking energy and 1.5 mills per kilowatt-hour for off-peak energy. Average annual revenues of $444,000 were anticipated and these were estimated to be sufficient to pay all production, replacement, and marketing costs of the United States' portion of power from the Falcon Dam project, including interest charges on the investment allocated to power, and to amortize the initial power investment within 51 years of the beginning of full commercial operation of the project. In response to the Commission's public notice of the filing of this proposed new rate schedule the Central Power and Light Company, the sole purchaser of Falcon Dam Power in the United States, advised the Commission that "the rates and charges submitted for approval are higher than the reasonable and fair value of the power and energy involved and that no market exists or could be developed for such power and energy at such rates and charges." This response was sent to the Department of the Interior, and as a result Interior requested that the filing be withdrawn and the current filing which resulted from subsequent negotiations between Interior and the Company was made in substitution therefor.

Under the proposed contract, the rates can be summarized as 4 mills per kilowatt-hour for energy delivered between the hours of 10 a.m. and 10 p.m.; 1.75 mills for energy delivered at any other time, not over $300,000 for the first 100,000,000 kilowatt-hours per year and 1 mill per kilowatt-hour for energy in excess of 100,000,000 kilowatt-hour per year. The International Boundary and Water Commission presently estimates that the average annual energy available to the United States for marketing to be 120,000,000 kilowatt-hours. The sale of this amount of energy under the currently proposed rates would produce an annual revenue of $320,000. Annual power costs, exclusive of amortization charges are estimated to average about $345,000. Of this estimated annual cost, approximately $180,500 is attributable to interest on the investment. It would therefore appear that although the power revenue to be provided by the project falls short of its total costs, it does exceed the out-of-pocket costs and provides for a substantial portion for the interest on the investment.

According to data submitted by Central Power and Light Company, in FPC Form No. 1, total 1961 production expenses of the Company's steam-electric plants averaged 2.52 mills per kilowatt-hour. The fuel component of such costs averaged 1.84 mills per kilowatt-hour. It would therefore appear that the proposed rates for electric energy of the quality available represent a reasonable value of energy in the area.

The Bureau of Reclamation states that for the past several years it has attempted to market Falcon power to preference customers in the area but, because of the physical location of the plant and the transmission facilities available, the plant is more or less captive. Also, the power can be marketed only to entities having generating facilities or other sources sufficient to supply requirements when Falcon power is not available. It asserts that the proposed rates are the final result of negotiations with the Company and, although the rates fall short of meeting project payout, under the circumstances there is no alternative. Our review of the facts and circumstances pertaining to sale of Falcon Dam power support this conclusion of the Bureau of Reclamation.

Written notice of the proposed new rate schedule was sent to State officials and other interested parties. Notice of the request was also published in the Federal Register on January 31, 1963 (28 F.R. 925), stating that any person desiring to make comments or suggestions for Commission consideration with respect to said rate schedule should submit same in writing on or before February 15, 1963. No comments or suggestions have been received.

The Commission finds:

It is appropriate for the purposes of the Act of Congress, referred to herein, that wholesale power rates in the proposed contract be confirmed and approved for a period of five years beginning with the date of this order.

The Commission orders:

Rates in the proposed contract be and they are hereby confirmed and approved for the sale of the United States' share of electric energy produced at the Falcon Dam for a period of five years from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

PLACER COUNTY WATER AGENCY, PROJECT NO. 2079

ORDER ISSUING LICENSE (MAJOR)

(Issued March 13, 1963)

Application was filed April 11, 1962 and amended September 10, 1962, by Placer County Water Agency (Applicant) of Auburn, California, for license for a proposed project to be known as the Middle Fork American River Project, and designated as Project No. 2079, to be constructed on the Middle Fork of American River and Rubicon River and their respective tributaries, in the counties of Placer and El Dorado, California, and affecting lands of the United States within the Tahoe and Eldorado National Forests.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, have advised that the proposed project will not have any measurable effect on any flood control, debris control and navigation projects of the Corps, or on flood conditions on the lower American and Sacramento Rivers, and terms and conditions in the interest of flood control or navigation are not deemed necessary for inclusion in any license for the proposed project.

The Department of the Interior, in reporting on the application, has advised it has no objection to the issuance of a license for the proposed project provided such license be conditioned upon certain consummated formal agreement and addendum thereto between Applicant and the Bureau of Reclamation, and contain certain special conditions in the interest of fish and wildlife resources and provide for possible archeological survey and salvage work in the area involved.

The Department of Agriculture, in reporting on the application, offered no objection to issuance of a license for the proposed project provided the terms and conditions of Form L–2 (17 FPC 62), with the exception of Article 13 therein, be included in any such license, together with the inclusion therein of a special condition for the suppression of fires on the lands to be occupied under the license. A Memorandum of Understanding with respect to the proposed project was signed September 18, 1962 by Applicant and on September 25, 1962 by the U.S. Forest Service, and amended and signed by Applicant on October 30, 1962 and by the U.S. Forest Service on November 2, 1962.

The Department of Fish and Game, State of California, in reporting on the application, has advised that extensive biological investigation by the Department to determine provisions to protect the fish and wildlife resources to be affected by the project resulted in the execution of an agreement between the Department and Applicant on July 30, 1962. The Department requested the inclusion in any license issued for the proposed project of a special condition in the interest of fish and wildlife resources.

The Department of Water Resources, State of California, in reporting on the application, has advised that according to the application for license, the proposed project would be desirable, would lead toward full basin development, would be in keeping with the concepts of the California Water Plan, and that the Department is in full accord with the plan of development.

The Commission finds:

(1) The proposed project will affect lands of the United States.

(2) Applicant is a "municipality" as defined in the Federal Power Act, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(3) Public notice of the filing of the application was given as required by the Act. There are no pending protests or petitions to intervene before the Commission. There are no conflicting applications pending.

(4) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(5) The issuance of a license as hereinafter provided will not interfere or be inconsistent with the purposes for which the Tahoe and Eldorado National Forests were created or acquired.

(6) The project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, under the terms and conditions hereinafter imposed.

(7) The installed horsepower capacity of the proposed project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 280,000 horsepower.

(8) The amount of annual charges to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified, and the amount of annual charges to be paid under the license for the use, occupancy and enjoyment of its lands should be determined later as hereinafter provided.

(9) The power to be generated by the project will be sold by Applicant at step-up substations to Pacific Gas and Electric Company for public utility purposes.

(10) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Placer County Water Agency of Auburn, California, (Licensee) under Section 4(e) of the Federal Power Act (Act) for a period of 50 years, effective as of March 1, 1963, for the construction, operation and maintenance of Project No. 2079 upon Middle Fork of American River and Rubicon River and their respective tributaries, and affecting lands of the United States within the Tahoe and Eldorado National Forests, and subject to the terms and conditions of the Act which is incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2079 consists of:

(1) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined and/or interest in such lands

necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license, and which are designated and described as follows:

(ii) All project works consisting principally of the following described developments:

Duncan Creek Diversion, a concrete gravity dam about 32 feet high with a crest length of 188 feet at an elevation of 5275 feet; and 11-foot horseshoe tunnel about 7880 feet long extending to the French Meadows Reservoir;

French Meadows Dam and Reservoir, a composite gravel and earthfill dam, on the Middle Fork of the American River, about 229 feet high with a crest length of about 2700 feet at an elevation of 5269 feet and would have 125,000 acre-feet of usable storage:

French Meadows-Hell Hole Tunnel, a 12-foot horseshoe tunnel 13,613 feet long connecting to a 6 foot 3 inch diameter penstock 655 feet in length extending to the French Meadows Powerhouse;

French Meadows Powerhouse, would contain a 24,000 horsepower reaction turbine connected to a 15,300 kilowatt generator; the tailrace would discharge into the Hell Hole Reservoir;

Hell Hole Reservoir, on the Rubicon River would be created by a rockfill dam about 410 feet high with a crest length of 1570 feet at an elevation of 4650 feet and would have 202,600 acre-feet of usable storage;

Hell Hole-Middle Fork Tunnel, a 13 foot 3 inch horseshoe tunnel 55,034 feet long connecting to a steel penstock about 3680 feet long varying from 9 feet to 7 feet 6 inches in diameter branching at a wye to two 66 inch pipes extending to the Middle Fork Powerhouse; the North Fork Long Canyon Diversion would have 26-foot high concrete dam with a crest length of 155 feet at elevation 4695 feet and the South Fork Long Canyon Diversion would have a 26 foot high concrete gravity dam with a crest length of 230 feet at elevation 4658 feet; each

would divert water to the Hell Hole-Middle Fork Tunnel by shafts to be located about midway of its length;

Middle Fork Powerhouse, would contain two 82,000 horsepower impulse turbines connected to two 54,900 kilowatt generators; the tailrace would discharge into the Middle Fork Interbay;

Middle Fork Interbay, on the Middle Fork of the American River to be created by a concrete gravity dam about 75 feet high with a 212 foot crest length at an elevation of 2540 feet;

Middle Fork-Ralston Tunnel, a 13 foot 3 inch horseshoe tunnel 35,326 feet long connecting to a steel penstock 1680 feet long varying in diameter from 9 foot 6 inches to 7 foot 6 inches extending to the Ralston Powerhouse;

Ralston Powerhouse, would contain one 106,000 horsepower impulse turbine connected to a 79,200 kilowatt generator; the tailrace would discharge into Ralston Afterbay;

Ralston Afterbay, on the Middle Fork of the American River would be created by a composite gravel and earthfill dam about 88 feet high, with a crest length of 525 feet long at elevation 1198 feet;

Ralston Afterbay-Oxbow Tunnel, a 16 foot horseshoe tunnel 1320 feet long connecting to an 11 foot steel penstock extending about 100 feet to the Oxbow Powerhouse;

Oxbow Powerhouse, would contain one 8700 hp Kaplan turbine connected to a 6000 kw generator, and appurtenant mechanical and electrical facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the amended application and which are designated and described as follows:

Exhibit M: Comprised of five (5) pages entitled "General Description of Mechanical & Electrical Equipment."

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–2, December 15, 1953, entitled "Terms and Conditions of License for Unconstructed Major Project Affecting Lands of the United States" (17 FPC 62), which terms and conditions are attached hereto and made a part hereof, except for Articles 10, 11, 13, 20 and 21 thereof, and subject to the following special conditions set forth herein as additional articles:

Article 25. The Licensee shall commence construction of the project works not later than July 1, 1963, shall thereafter in good faith and with due diligence prosecute such construction and shall complete construction of such works not later than December 31, 1966.

Article 26. The Licensee shall, within one year following completion of the construction of the project file with the Commission revised Exhibits F and K showing final project boundary prepared in accordance with the Commission's Rules and Regulations.

Article 27. The Licensee shall do everything reasonably within its power and shall require its employees, contractors and employees of contractors to do everything reasonably within their power, both independently and upon the request of officers of the Agency concerned to prevent, make advanced preparations for suppression, and suppress fires on the lands to be occupied or used under the license. The Licensee shall be liable for and pay the cost incurred by the United States in suppressing fires caused from the construction, operation, or maintenance of the project works or of the work appurtenant or accessory thereto under the license.

Article 28. The Licensee shall cooperate with the San Francisco State College in the possible survey and salvage of historical and archeological data (including relics and specimens) in the project area and shall compensate the college for the expenses incurred up to a total of $6,000, upon further order of the Commission.

Article 29. The Licensee shall, prior to impounding water, clear all lands in the bottoms and margins of: Duncan Creek Diversion, North Fork Long Canyon Diversion, South Fork Long Canyon Diversion, Middle Fork Interbay and Ralston Afterbay reservoirs up to high-water level. Licensee shall prior to impounding water, clear all lands in French Meadow Reservoir between elevation 5,120 feet (5 feet below minimum pool elevation) to high-water level and in Hell Hole Reservoir between elevation 4,335 feet (5 feet below minimum pool elevation) to high-water level. Licensee shall dispose of all temporary structures, unused timber, brush, refuse, or inflammable material resulting from the clearing of the lands or from the construction and maintenance of the project works. In addition, all trees along the margins of reservoirs which may die from operation of the reservoir shall be removed. The clearing of the lands and the disposal of the material shall be done with due diligence and to the satisfaction of the authorized representative of the Commission.

Article 30. The Licensee shall keep the two tainter gates of the French Meadows Spillway blocked in a fully open position by November 15 of each year and the gates shall remain in that position until the following April 1, unless special permission is obtained for a specific year from the authorized representative of the Commission.

Article 31. The Licensee shall provide protective concrete at the impact and lip areas at the angled intersection of the French Meadows Spillway and its escape channels, as shown on Drawing Exhibit L, Sheet 4A (FPC No. 2079–162), if so ordered by the Commission.

Article 32. The Licensee shall construct a stilling pool and/or other types of energy dissipating devices below each cascade of the Hell Hole spillway channel in the interest of structure safety after the spillway area foundation conditions are exposed and the quality of rock is determined; also, Licensee shall incorporate into the designs of the French Meadows and Hell Hole spillway channel walls additional protective measures against erosion, if so ordered by the Commission.

Article 33. The Licensee shall construct such unit or units which will comprehensively develop the head on the river downstream from the Oxbow powerhouse when so ordered by the Commission upon its determination that such unit or units are economically feasible, after notice and opportunity for hearing.

Article 34. The Licensee shall construct, maintain and operate such protective devices and shall comply with such reasonable modifications of the project structures and operation in the interest of fish and wildlife resources, provided that such modifications shall be reasonably consistent with the primary purpose of the project, as may be prescribed hereafter by the Commission upon its own motion or upon recommendation of the Secretary of the Interior or the California Department of Fish and Game after notice and opportunity for hearing and upon a finding that such modifications are necessary and desirable and consistent with the provisions of the Act: *Provided further,* That subsequent to approval of the final design drawings prior to commencement of construction no modifications of project structures in the interest of fish and wildlife resources which involve a change in the location, height, or main structure of a dam, or the addition of or changes in outlets at or through a dam, or a major change in generating units, or a rearrangement or relocation of a powerhouse, or major changes in a spillway structure shall be required.

Article 35. Whenever the United States shall desire, in connection with the project, to construct fish handling facilities or to improve the existing fish handing facilities at its expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such fish handling facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall modify the project operation as may be prescribed by the Commissioner, consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish handling facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish handling facilities or to relieve the Licensee of any obligation under the license.

Article 36. The Licensee shall operate Duncan Creek Diversion, French Meadows, and Hell Hole Reservoirs in a manner that will permit maintenance of minimum pools according to the following schedules:

Location and forecasted runoff to Folsom Reservoir in acre-feet [1]	Minimum pool in acre-feet	
	June through September	October through May
French Meadows Reservoir		
More than 2,000,000	60,000	50,000
Less than 2,000,000 but not less than 1,200,000	60,000	25,000
Less than 1,200,000	28,000	8,700
Hell Hole Reservoir		
More than 2,000,000	70,000	50,000
Less than 2,000,000 but not less than 1,200,000	70,000	25,000
Less than 1,200,000	26,000	5,500
Duncan Creek Diversion Reservoir		
Any	Water surface elevation at 5,259 feet.	

[1] Unimpaired run-off of American River to Folsom Reservoir for current year, Oct. 1 through Sept. 30, as estimated by the California Department of Water Resources on or about Apr. 1 of each such calendar year. The estimate shall apply for the period June 1 of each such calendar year to May 31 of the succeeding calendar year. Provided that the schedules may be modified if found appropriate to improve the fishery and recreation value to the extent mutually agreeable to the Licensee, the U.S. Forest Service, the Bureau of Sport Fisheries and Wildlife, and the California Department of Fish and Game.

Article 37. The Licensee shall release from Duncan Creek Diversion Dam, French Meadows Dam, Hell Hole Dam, South Long Canyon Diversion Dam, North Long Canyon Diversion Dam, Ralston Afterbay Dam and Oxbow Powerplant, sufficient flows to meet the following schedule:

Location	Forecasted Runoff to Folsom Reservoir in acre-feet [1]	Streamflow in cubic feet per second
Duncan Creek Diversion Dam	1,000,000 or more	8, or the natural flow, whichever is less.
	Less than 1,000,000	4, or the natural flow, whichever is less.
French Meadows Dam	1,000,000 or more	8, at all times.
	Less than 1,000,000	4, at all times.
Hell Hole Dam	1,000,000 or more	20, June 1 through July 25. 15, July 26 through Aug. 5. 10, Aug. 6 through Oct. 31. 14, Nov. 1 through Jan. 31. 20, Feb. 1 through May 31.
	Less than 1,000,000	8, June 1 through Dec. 31. 6, Jan. 1 through Mar. 25. 8, Mar. 26 through May 31.
South Long Canyon Diversion Dam.	1,000,000 or more	5, or the natural flow, whichever is less.
	Less than 1,000,000	2½, or the natural flow, whichever is less.
North Long Canyon Diversion Dam.	Any forecast	2, or the natural flow, whichever is less.
Ralston or Middle Fork Interbay	1,000,000 or more	23, or the natural flow, whichever is less.
	Less than 1,000,000	12, or the natural flow, whichever is less.
Oxbow Powerplant to provide in Middle Fork of American R. below confluence with North Fork of the Middle Fork.	Any forecast	75, year-round.

[1] See footnote—article 36, *supra*.

Provided that through mutual agreement among the Licensee, the U.S. Forest Service, the Bureau of Sport Fisheries and Wildlife, and the California Department of Fish and Game, the flow schedule for French Meadows Dam and Hell Hole Dam may be altered to improve fishery and recreational values. When the forecasted run-off is 1,000,000 acre-feet or more, total releases shall not

exceed 5,800 acre-feet from French Meadows Dam nor 11,000 acre-feet from Hell Hole Dam. When the forecasted runoff is for less than 1,000,000 acre-feet, total releases shall not exceed 2,900 acre-feet from French Meadows Dam nor 5,500 acre-feet from Hell Hole Dam.

Provided further that Oxbow Powerplant releases shall not cause vertical fluctuations in stream stages (measured in representative section) greater than one foot in one hour; provided that should a cooperative study be conducted by the Licensee and the California Department of Fish and Game to determine the effect of such fluctuations, modifications of this provision may be made, if mutually agreed by those agencies.

Article 38. The Licensee shall take every precaution during the construction period to prevent unnecessary destruction of fish and wildlife habitat, including the provision and enforcement of rules and regulations pertaining to those measures to govern the action of its contractors. Wherever possible, habitat along streams shall not be disturbed. However, if streamside habitat is altered during construction, it shall be left in a condition favorable to the reestablishment of stream-side vegetation. Silts, fines, and other construction debris shall not be placed in the streams, and special care shall be taken in depositing spoil from the construction of project tunnels to avoid destruction of wildlife habitat.

Article 39. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, hydraulically and electrically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, the benefits of which shall be shared equitably by the participants in such coordination. In the event the participants cannot agree thereon, the Commission shall equitably apportion the benefits after notice and opportunity for hearing upon the Commission's own motion or upon motion of any party.

Article 40. The Licensee shall install additional capacity and make other changes in the project as directed by the Commission, to the extent it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 41. The Licensee shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations, in effect from time to time. The authorized installed capacity for such purposes is 280,000 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, an amount to be determined hereafter by the Commission.

Article 42. The Licensee shall, within one year from the effective date of this license, file with the Commission a recreational use plan for the project which shall include not only recreational improvements which may be provided by others, but the recreational improvements the Licensee plans to provide.

(C) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 380

PENNSYLVANIA POWER & LIGHT COMPANY, PROJECT NO. 2268

OPINION AND ORDER DENYING APPLICATION FOR NEW 50-YEAR LICENSE

(Issued March 13, 1963)*

Syllabus

1. Limitation of 50 years placed upon license period is one of most explicit provisions of the Federal Power Act. P. 469.
2. Reviewing legislative history of the Act, Commission *states* there is serious doubt as to propriety of issuing new license where in form an old license is surrendered, but in substance existing license would be extended beyond 50 years—in effect, denying Congress possible recapture at end of 50 years. P. 470.
3. Where changes in over-all project works are relatively minor and basic structure remains as originally licensed, such changes are not sufficient to make it a "new" project, even if this fact were to be determinative. P. 471.
4. In proceeding arising under Section 4(e) of The Federal Power Act, Commission *denies* application for new 50-year license, without prejudice to submission of proposed amendment to existing license. P. 472.

Randall J. LeBoeuf, Jr., For Pennsylvania Power & Light Company.

Thomas M. Debevoise and *Joseph B. Hobbs*, For Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

O'CONNOR, *Commissioner:*

Pennsylvania Power & Light Company (PP&L) on July 31, 1959 filed application, designated Project 2268, requesting a new license for existing project works already under license at its Holtwood project (Project No. 1881) and for certain changes, including additions, thereto. The Holtwood project is located on the Susquehanna River in Pennsylvania about 40 miles downstream from Harrisburg, between the larger Conowingo (Project No. 405) development downstream and the larger Safe Harbor (Project No. 1025) upstream. PP&L proposes to modify certain of the existing project works and to add a new 18,000 kilowatt generating unit "provided a new license for the project is issued for a term of 50 years from the date of issuance of the new license on terms acceptable to Applicant."

The Commission asserted jurisdiction over the Holtwood project in November 1939, and its order requiring a license was affirmed in 1941. *Pennsylvania Water and Power Co.* v. *F.P.C.*, 123 F. 2d 155 (D.C. Cir., 1941) *certiorari* denied 315 U.S. 806. A license for the Holtwood project works, Project No. 1881, was issued in July of 1951, 10 FPC 1162, modified 10 FPC 1368. By its terms the license became effective as of January 1, 1938 and expires on June 30, 1970. PP&L became the licensee of Project No. 1881 in 1955 by merger and Commission approval of the license transfer.

The existing project works of the Holtwood project consist principally of a concrete gravity overflow dam 2,392 feet long and about 55 feet high with a fishway and log chute. The crest of the dam is presently at elevation 165 feet with the effective height of the dam being increased 4¾ feet by flashboards to elevation 169¾ feet, creating a pool extending upstream about 8 miles to the tailwater of the Safe Water Harbor project. A powerhouse integral with the

*Rehearing denied by order issued June 25, 1963, 29 FPC 1294.

dam contains ten main generating units having an aggregate turbine capacity of 158,000 horsepower and generator capacity of 108,800 kilowatts. In addition to the ten main generating units there are two turbine driven exciter units and two 5,000 kva frequency converters. A 25 cycle substation is located within the main structure, and a 60 cycle substation is adjacent to the powerhouse.

In its application (pp. 2, 6–8), PP&L states that the proposed reconstruction will consist of replacing the existing 4¾ foot flashboards with 7 foot flashboards, widening and deepening the tailrace, installing a new 18,000 kilowatt additional generating unit and installing a 48 foot by 35 foot floodgate.

The proposed new construction would increase the head at the Holtwood project by about 8 feet. The present effective capacity of the Holtwood project is 100,000 kw, which would be increased to a net of 140,000 kw after deducting the related 4,000 kw reduction at Safe Harbor. The average annual energy output at Holtwood would increase from a present average output of 585,000,000 kwh to 786,000,000 kwh, about 20,000,000 of which would be used to replace energy lost at the upstream Safe Harbor project.

Using January 1, 1959 price levels, the capital cost of the proposed project changes is estimated at $9,000,000. The estimated average annual cost of the proposed changes in the Holtwood project is $1,304,000 and the estimated average annual cost of alternate steam-electric power is $1,811,000. Thus, the average cost of alternate steam-electric power would exceed the cost of the average additional net power production due to the proposed changes in the Holtwood project by about one-half million dollars ($507,000) annually.

Briefly, PP&L proposes to surrender formally its existing license for Holtwood which terminates in 1970 and to obtain a new 50-year license covering the existing Holtwood project works together with the planned additions. In substance this amounts to a request to extend the existing license to the year 2013. It would mean that the existing portions of the Holtwood project would have been effectively under license from 1938 to 2013, a period of 75 years, without opportunity being afforded the Government to recapture or consider recapture of the project as provided by the Federal Power Act in Section 14 "upon or after the expiration of any license", which according to Section 6 "shall be issued for a period not exceeding 50 years."

The applicant urges that the Commission has legal authority under the Act to issue such a new license, on the argument that the proposed construction is of sufficient magnitude to constitute a "new" project. Applicant further urges that as a matter of policy there is "good public reason" for the Commission to issue such a license in view of the increased and more effective use of the natural resource that would result, and since applicant would be unwilling to proceed with this development in the absence of a new 50-year license.

The limitation of fifty years placed upon the license period is one of the most explicit provisions of the Federal Power Act as revealed both by the express provisions of the statute, in Sections 6, 10(i), 14 and 15, and by a long and specific legislative history.

The General Dam Act of 1906 (34 Stat. 386) placed no time limitation on the duration of its grants. However, President Theodore Roosevelt in vetoing several Congressional authorizations for dams[1] stated a number of conditions which he considered basic to the public treatment of such natural resources, including that there be no grants in perpetuity and that "Provisions should be made for the termination of the grant or privilege at a definite time, leaving to future

[1] See Sen. Doc. No. 438, 60th Cong., 1st Sess.; House Doc. 1350, 60th Cong., 2d Sess.

generations the power or authority to renew or extend the concession in accordance with the conditions which may prevail at that time".[2]

In response, the General Dam Act of 1910 (36 Stat. 593) limited authorization to not more than 50 years but reserved the right to revoke at any time. This proved unsatisfactory and accordingly new legislation was sought, which eventually became the Federal Water Power Act of 1920. This, with but minor amendment, so far as concerns the provisions involved here,[3] became part of the Federal Power Act in 1935.

During the many years when the legislation which finally became the Federal Water Power Act was before the Congress, every major bill proposed contained an express provision for a license to be terminated upon the expiration of no more than a fifty-year period.[4] In fact the 50-year provision was a focal point of the compromise between the conservationists and their opponents which finally resulted in the 1920 Act.[5] Briefly, the conservationists were concerned lest there be an indefinite private grant of public resources and considered 50 years, with the possibility of renewal, too long. Others considered a provision for recapture after 50 years too restrictive, and sought either an indefinite term, or such limitation on recapture after 50 years as to achieve that in practice.

There are a great many references during the Congressional debates extending through the period from 1914 to 1920, to the 50-year expiration term and its significance.[6] There are very few specific statutory provisions which have had more explicit Congressional attention focused upon them, and over a longer period. As a minimum, this long history emphasizes the intention that a license expire at the end of no more than 50 years, rather than becoming an indefinite or perpetual license, or one renewable by the Commission before Congress could have the opportunity of recapture. Running through all this was a clear insistence that the 50-year expiration period be a real, and not nominal, limitation at the end of which the Congress might re-examine the use of the particular natural resource. Once the provisions for expiration of the term after 50 years, for recapture, etc., were finally incorporated into the 1920 Act, the controversy was decided. They were re-enacted in 1935 without significant amendment or debate.[7]

In view of this history, there is serious doubt as to the propriety of issuing a new license where in form and old license is surrendered but in substance the existing license would be extended beyond 50 years. The practical effect would be to deny Congress the opportunity to consider possible recapture at the end of 50 years. Such action by the Commission would risk a conflict with both the letter and the intent of the Act. This conclusion is strengthened by such portions of the Power Act as Section 10(i), which provides that various requirements of the Act may be waived in connection with minor projects but expressly excepts the requirement that the license period be not more than 50 years.

[7] H. Rept. No. 1318, *supra*, note 3; 79 Congressional Record 8757–58, 8773, 8945–6, 9053–55, 10312–15, 10377–79, 10567–69, 10634, 10827–30, 10839, 11095 (May to July, 1935).

If there are circumstances under which it would be proper for this Commission to extend existing licenses prior to their expiration date by including their project works in a new 50-year license, they would have to involve factual situations markedly different from those presented here. Although the new construction proposed by PP&L may substantially increase the present effective capacity and annual energy output of the Holtwood project, the changes in the overall project works are relatively minor, and the basic structure will remain as originally licensed. These additions clearly do not suffice to make it a "new" project, even if that fact were to be viewed as determinative.[8]

The present application does not find support in those situations where a new 50-year license has been granted to cover both existing project works which were not already licensed and new project works (*e.g., Carolina Alumnium Co.*, 19 FPC 704 (1958)). The combined period during which an existing project "should" have been under license, and when it is actually under license, may exceed 50 years in such instances. However, these cases usually present a legitimate argument over jurisdiction and as to when the project "should" have been licensed. Therefore, they do not include the additional element present here of permitting a clearly jurisdictional project work to be formally under license for a period of more than 50 years. In any event, the explicit legislative history noted above and our recent determination to deal more strictly with owners of unlicensed jurisdictional projects[9] make clear that this line of cases cannot be extended nor serve as controlling precedent in the instant proceeding.

Two 1955 opinions, *Pacific Gas & Electric*, 14 FPC 518, *Pacific Gas & Electric*, 14 FPC 556, are also relied upon by PP&L. We recognize that in these cases the Commission took action which could be construed as supporting the instant proposal in that new 50-year licenses were issued incorporating older licensed project works.[10] But the opinions in those cases did not address themselves to the Congressional purpose as to the term of licenses, and in at least two later cases the Commission has expressly refused to follow these precedents. See *Alabama Power Co.*, 18 FPC 257, 263 (1957) and *Georgia Power Co.*, 21 FPC 296, 300–301 (1959). We adhere to the more recent decisions for the reasons set forth above.

The Commission finds:

(1) It would not be in the public interest to accept the surrender of the existing license for Holtwood Project No. 1881 and issue in its place a new 50-year license covering the present Holtwood Project together with proposed changes and additions.

---

[8] As an example of difficulties presented by the argument that the presence of a "new" project justifies a new license, consider the situation where after 49 years under license the licensee proposes to double the existing works, or to tear down the project works and rebuild a completely new and expanded project, and applies for a new 50-year license on the grounds that it is a "new" project. It is not easy to reconcile this with the strictures of the Act against a perpetual private grant.

[9] Opinion No. 357, *Public Service Co. of New Hampshire*, Project No. 2288 (April 25, 1962), 27 FPC 830.

[10] In *Pacific Gas & Electric Co.*, 14 FPC 518, a minor part license (in which recapture had been waived) and a major part license were merged which two new associated proposals for separate developments on the same river, with the package receiving a new 50-year license. By this action the minor part project works (which was for a substantial development) was for the first time made subject to recapture as well as the other provisions of the Act which had previously been waived. In the other case, *Pacific Gas & Electric Co.*, 14 FPC 556, a minor part license and an associated major part license were given a new joint license, having the effect of extending the life of the two projects for 12 and 14 years respectively and making the minor part license subject to recapture, in order to have the licenses run concurrently with licenses being issued to an irrigation district for project works on the same river with which they were to be electrically and financially integrated.

(2) It would be in the public interest to permit an amendment of the existing license for Holtwood Project No. 1881 to permit the proposed changes and additions.

The Commission orders:

Applicant's request for a new 50-year license covering the present Holtwood Project No. 1881 together with proposed changes and additions is denied, without prejudice to the submission of a proposed amendment to the existing license to cover the proposed construction.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

SHELL OIL COMPANY, DOCKET NO. G–17560; PERRY R. BASS (OPERATOR), ET AL., FORMERLY SID W. RICHARDSON D/B/A RICHARDSON & BASS (OPERATOR), ET AL., DOCKET NO. G–17399

ORDER CONDITIONALLY APPROVING OFFERS OF SETTLEMENT AND REISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 13, 1963)

Offers of settlement of the issues in these South Louisiana certificate proceedings have been filed by Shell Oil Company (on December 21, 1962) and Perry R. Bass (on December 26, 1962). These proceedings were severed by notice issued January 7, 1963 from those in Placid Oil Company, *et al.*, Docket No. G–13183, *et al.*

These proceedings were remanded to us as a result of judicial review of a certificate order issued August 10, 1959. *Texas Gas Transmission Corp.* 22 FPC 378, reversed, *Public Service Commission of N.Y.* v. *F.P.C.*, 287 F. 2d 146 (CADC). The sales in question are made to Hope Natural Gas Company under Bass' Rate Schedule No. 5 and Shell's Rate Schedule No. 215.

In general, the proposals follow the pattern approved in *Texaco Inc.*, 28 FPC 247 (order issued July 30, 1962 in Docket No. G–13169 *et al.*) and should be approved subject to the conditions prescribed below. No party has opposed these settlement proposals or waiver of the intermediate procedure in these proceedings.

Each if the settlement offers provides for a tolling of interest on the refunds as of some spscified date (ranging from July 1, 1962, to December 31, 1962). In *Texaco Inc., supra*, we did sanction a tolling of interest; but the settlement proposals there approved were filled within a matter of days of the tolling date there proposed. In *Continental Oil Company*, 28 FPC 1090, (order issued December 21, 1962, in Docket No. G–11024 *et al.*) we required that interest continue to accrue until the date of actual refund; but in that case we were approving a settlement proposal filed after our final order had been issued. Here we believe it equitable to permit a tolling of interest, and to prescribe that interest shall continue to accrue until the last day of the month on which the settlement offer was filed.

The Commission further finds:

(1) Shell Oil Company and Perry R. Bass (Operator), *et al.*, are natural-gas companies within the meaning of the Natural Gas Act, as heretofore found, and are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The sales of natural gas proposed by the applications, as amended, are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales proposed by applicants in the above-captioned dockets, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below effective as of the date of initial delivery.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

The Commission further orders:

(A) The intermediate decision procedure is waived in these proceedings.

(B) Certificates of public convenience and necessity are hereby re-issued upon the conditions set forth herein, to applicants, effective as of the dates of initial delivery, for the sale of natural gas in interstate commerce for resale as proposed, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications.

(C) The certificates issued by paragraph (B), above, are granted upon the express condition that applicants fully comply with the terms of the offers of settlement, which are expressly approved; *provided, however*, that interest on all principal amounts to be refunded shall continue to accrue through December 31, 1962.

(D) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals, applicants shall report to the Commission, in writing and under oath, the amount of the refunds made to their purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from purchaser showing receipt of the refunds in conformity to the settlement as approved.

(E) Upon full compliance of applicants with all the terms of this order and of the settlement proposals, applicants shall be relieved of any further refund obligations in these proceedings and said proceedings shall terminate.

(F) The certificates herein issued are not transferable and shall be effective only so long as the applicant continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(G) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder; *provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(H) The grant of certificates herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter insti-

tuted by or against applicants, particularly any proceeding under Section 5 of the Natural Gas Act, and is without prejudice to claims or contentions which may be made by the Commission, applicant, the Commission staff, or any affected party herein in any other proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

JERSEY CENTRAL POWER & LIGHT COMPANY, PROJECT NO. 2309 AND DOCKET NO. E-7005

ORDER ISSUING LICENSE (MAJOR) AND PERMITTING WITHDRAWAL OF DECLARATION OF INTENTION

(Issued March 14, 1963)

Application was filed on March 13, 1962, and amended on August 1 and December 13, 1962, by Jersey Central Power & Light Company (Applicant) of Morristown, New Jersey, for a license under Section 4(e) of the Federal Power Act (Act) for a proposed project, known as the Yards Creek Pumped Storage Project, and designated as Project No. 2309, to be located on Yards Creek, a tributary of Paulins Kill, which is a tributary of the Delaware River, in Warren County, New Jersey, in the vicinity of Pahaquarry and Blairstown Townships.

On July 25, 1961, as supplemented on September 25, 1961, Applicant filed a declaration of intention under Section 23(b) of the Act to construct the Yards Creek Project (Docket No. E-7005). On December 13, 1962, Applicant filed a request to withdraw its declaration of intention, and we are hereinafter permitting such withdrawal.

The Secretary of the Army and the Chief of Engineers, in reporting on the application advised that the plans of the project structures affecting navigation had been approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended, for inclusion in any license issued for the project, certain conditions in the intrests of recreation, fish and wildlife.

The Delaware River Basin Commission has advised that it has approved the Yards Creek project and offers no objection to issuance of a license for the project.

The Commission finds:

(1) The output of the proposed Yards Creek project will be fed into the interstate network and will flow into New Jersey, Pennsylvania, and possibly New York when operated during the peak load hours during all seasons of the year. During off-peak times, when the proposed Yards Creek project is pumping into storage, power will be utilized from Pennsylvania, New Jersey, and possibly New York.

(2) The proposed Yards Creek Pumped Storage Project will constitute the initial phase of the ultimate plan of development which would be located in and along the Delaware River, a navigable water of the United States within the meaning of Section 3(8) of the Act.

(3) Public notice of the filing of the application was given as required by the Act. No protests were received. There are no conflicting applications before the Commission.

(4) Applicant is a corporation organized under the laws of the State of New Jersey and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(5) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(6) The proposed project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, under the terms and conditions hereinafter imposed.

(7) The step-up transformers and switch gear and the short 230 kv transmission line mentioned in subparagraph (ii) of paragraph (C) below are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(8) The installed horsepower capacity of the proposed project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charges is 450,000 horsepower.

(9) The energy to be generated by the proposed project would be distributed and sold by Applicant for public utility purposes.

(10) The amount of annual charges to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(11) In accordance with Section 10(d) of the Act, the specified rate of return upon the net investment in the project, and the proportion of surplus earnings to be paid into and held in amortization reserves are reasonable as hereinafter provided.

(12) The exhibits designated and described in paragraph (C) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) Permission is hereby granted Applicant to withdraw its pending aforementioned declaration of intention to construct the Yards Creek Project, in Docket No. E–7005.

(B) This license is hereby issued to Jersey Central Power & Light Company (Licensee) under Section 4 (e) of the Federal Power Act for a period of 50 years, effective as of March 1, 1963, for the construction, operation and maintenance of the Yards Creek Project No. 2309 to be located on Yards Creek, tributary of Paulins Kill, which is a tributary of the Delaware River, a navigable water of the United States, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(C) Project No. 2309 consists of:

(i) All lands constituting the project area and inclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2309–1) General Map; and

Exhibit K: (FPC No. 2309–2) Plan of Project

(ii) Project works consisting of:

Lower Reservoir, created by a main earth dam located 3¾ miles upstream from the mouth of Yards Creek, an earth saddle dam and a concrete uncontrolled

spillway; the reservoir will have a maximum water surface of 818.5 feet, a surface area of 300 acres and usable power storage of 4,650 acre-feet; outlet works under the main dam;

Auxiliary Reservoir, created by a low earth dam located on a small tributary of Yards Creek, an excavated spillway having a concrete sill and the dam provided with outlet works; the reservoir will have 480 acre-feet of seasonal storage to be released into the Lower Reservoir as needed;

Upper Reservoir, created by a main earth dam located across an intermittent tributary of Yards Creek near the top of Kittatinny Mountain and earth dikes following the limits of the watershed of the tributary; the reservoir will have a maximum water surface of about 164 acres at elevation 1,555 feet and usable capacity of 4,650 acre-feet; a water passage between the Upper and Lower Reservoirs comprised of an intake channel, a pressure tunnel and a penstock; a powerhouse containing three reversible pump-turbines, each having a rated capacity of 150,500 horsepower when generating and 186,000 horsepower when pumping and connected to a 112,500-kilowatt generator (125,000 kva @ 0.90 P.F.); step-up transformers and switchgear; a short 230 kv transmission line to applicant's Kittatinny Substation (non-project); and appurtenant electrical and mechanical facilities; the location, nature and character of which are more specifically shown by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: General Design Drawings

FPC No.	Sheet No.	Description
2309-3	1 of 12	Upper reservoir, dam and dikes plan, sections and stability diagrams.
2309-4	2 of 12	Lower reservoir, dam and dikes plan, sections.
2309-15	2A of 12	Lower dam spillway plans and sections.
2309-16	2B of 12	Lower reservoir, outlet structure plan and sections.
2309-6	4 of 12	Tunnel and penstock plan, profile and sections.
2309-7	5 of 12	Powerhouse, plans.
2309-8	6 of 12	Powerhouse, cross sections.
2309-13	11 of 12	Auxiliary reservoir, plans and sections .

Exhibit M: One typewritten page, filed in the Commission March 13, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(D) This license is also subject to the terms and conditions set forth in Form L-4, December 15, 1953, entitled "Terms and Conditions of License for Unconstructed Major Project Affecting Navigable Waters of the United States" (16 FPC 1284), which terms and conditions, designated as Articles 1 through 18, are attached hereto and made a part hereof, except for Articles 7, 8, 10, 11 and 12 thereof; and subject to the following special conditions set forth herein as additional articles:

Article 19. The Licensee shall pay to the United States the following annual charge: For the purpose of reimbursing the United States for the costs of administration of Part I of the Act one (1) cent per horsepower on the authorized installed capacity (450,000 horsepower) plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy generated during the calendar year for

which the charge is made; or such other amounts as may hereafter be determined as necessary to reimburse the United States for the costs of administration.

Article 20. The Licensee shall commence construction of the project works within one year from the effective date of this license, shall thereafter in good faith and with due diligence prosecute such construction, and shall complete construction of such project works not later than four years from the effective date of this license.

Article 21. The Licensee shall, within one year from the date of completion of the project, file for Commission approval Exhibits F and K prepared in accordance with the Commission's rules and regulations.

Article 22. The Licensee shall prior to flooding, clear all lands in the bottom and along the margins of all reservoirs up to high water level, and shall dispose of all temporary structures, unused timber, brush, refuse, or inflammable material resulting from the clearing of the lands or from the construction and maintenance of the project works. In addition, all trees along the margins of the reservoirs which may die during the operation of the project shall be removed. The clearing of the lands and the disposal of the material shall be done with due diligence and to the satisfaction of the authorized representative of the Commission.

Article 23. The Licensee shall install additional capacity and make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 24. The Licensee, shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, the benefits of which shall be shared equitably by the participants in such coordination.

Article 25. The Licensee shall cooperate with the National Park Service and make every reasonable effort to protect the scenic and recreational values of the Tocks Island National Recreation Area, if and when authorized, as recommended by the U.S. Corps of Engineers, and the Department of the Interior.

Article 26. The Licensee shall, within one year from the effective date of this license, file with the Commission a recreational use plan for the project which shall include not only recreational improvements which may be provided by others, but the recreational improvements the Licensee plans to provide.

Article 27. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 28. The Licensee shall construct, maintain, and operate such protective devices and shall comply with such reasonable modifications of the project structures and operation in the interest of fish and wildlife resources, provided that such modifications shall be reasonably consistent with the primary purpose of the project, as may be prescribed hereafter by the Commission upon its own motion or upon recommendation of the Secretary of the Interior or the New Jersey Division of Fish and Game after notice and opportunity for hearing and upon a finding that such modifications are necessary and desirable and consistent with the provisions of the Act: *Provided further*, That subsequent to approval of the final design drawings prior to commencement of construction no modifications of project structures in the interest of fish and wildlife resources which involve a change in the location, height, or main structure of a dam, or the addition of or changes in outlets at or through a dam, or a major change in generating units, or a rearrangement or relocation of a powerhouse, or major changes in a spillway structure shall be required.

Article 29. Whenever the United States shall desire, in connection with the project, to construct fish handling facilities or to improve the existing fish handling facilities at its expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such as Licensee's lands and interests in lands, reservoirs, waterways, and project works as may be reasonably required to complete such fish handling facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall modify the project operation as may be prescribed by the Commission, consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish handling facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish handling facilities or to relieve the Licensee of any obligation under this license.

Article 30. The Commission reserves the right to determine at a later date what additional transmission facilities, if any, shall be included in this license as part of the project works.

(E) The exhibits designated and described in paragraph (C) above are hereby approved as part of this license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

OPINION NO. 381

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2082

OPINION AND ORDER ON PETITION TO REQUIRE LICENSEE TO CONSTRUCT, OPERATE, AND MAINTAIN A FISH HATCHERY, AMENDING LICENSE, AND DIRECTING REVISED FILINGS

(Issued March 14, 1963)*

Syllabus

1. Commission *requires* Licensee to construct fish hatchery at its Iron Gate Dam to compensate for spawning areas rendered inaccessible by dam's construction. P. 482.

---

* Initial decision appears on p. 487. Opinion 381–A, issued August 19, 1963, 30 FPC 499. Affirmed in part, remanded in part, *Pacific Power & Light Co.* v. *F.P.C.*, 333 F. 2d 689 (CA9–1964); petition for *certiorari* filed November 2, 1964.

2. Since Licensee has created situation necessitating fish hatchery it is reasonable that it pay cost of construction thereof and substantial portion of operation and maintenance costs. P. 484.
3. Commission *rejects*, as immaterial, argument that Licensee should not be required to pay costs [Note 2, *supra*] on basis of State statutes, since Federal Government in enacting Federal Power Act has occupied entire field of licensing power projects on navigable waters to exclusion of concomitant state jurisdiction. P. 484.
4. Equitable division of costs will be achieved if yearly operation and maintenance costs are assessed 80 percent against Licensee, with California Department of Fish and Game assuming balance. P. 485.
5. Commission retains continuing jurisdiction to settle possible disputes over determination of proper annual amounts to be charged Licensee by State. P. 485.
6. Commission *amends* license to *require* construction of fish hatchery. P. 486.

Gregory A. Harrison and *John E. Sparks*, for the Pacific Power & Light Company.

Ralph W. Scott, for the Attorney General, State of California.

William J. Costello and *Daniel Slater*, for the Department of the Interior, Bureau of Sports, Fisheries & Wildlife.

Ford B. Ford, for California Senate Fact Finding Committee on Natural Resources.

Joseph B. Hobbs and *Daniel Goldstein*, for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

WOODWARD, *Commissioner:*

This proceeding arose before the Commission on a petition filed August 21, 1961, by the State of California, acting by and through its Department of Fish and Game (Department), requesting that the Commission require Pacific Power & Light Company (Licensee), licensee for Project No. 2082,[1] to erect and maintain a fish hatchery and appurtenant facilities, pursuant to Article 49 of the license, to continue the normal runs of salmon and steelhead trout which have been displaced by Licensee's construction of its Iron Gate Development on the Klamath River in northern California. Licensee answered the petition on September 13, 1961, by denying the need for a hatchery or other fishery facilities for the purpose stated, or that it should be required to construct or maintain such facilities. Pursuant to order of the Commission, a hearing was held in San Francisco, California during June 1962. The parties' arguments were consistent with their pleadings, the Department presenting testimony of fish biologists regarding the present and anticipated deleterious effects of the Iron Gate Development to support its contention that the hatchery is vital to the preservation of the fishery resource, while Licensee claimed that the evidence as so presented and as contradicted by testimony of its own biologist fails to establish that the existing resource will not adequately be maintained without the hatchery. The staff of the Commission adopted a position supporting the

[1] By orders issued June 16, 1961, 25 FPC 1154, 1156, the Commission approved a merger between Licensee and The California Oregon Power Company (COPCO), Licensee being the surviving corporation. Pacific Power & Light Company is subject to all conditions of the licenses previously issued to COPCO, which includes Project No. 2082. The license for the project expires February 28, 2006.

need for the hatchery and its construction by Licensee but proposed that the Department and Licensee share equally in the costs of operation and maintenance.

On November 14, 1962, the presiding examiner issued his initial, or recommended, decision (*infra*) in which he determined that Licensee should be required to construct a fish hatchery facility at its expense to replace the natural spawning grounds eliminated by Iron Gate Dam, but that the cost of operation and maintenance of the hatchery and of the other appurtenant facilities thereafter should be borne by the State of California. Exceptions to the decision have been filed by each of the three parties, *i.e.*, Licensee, the Department, and the Commission's staff,[2] and oral argument was held before the Commission on January 24, 1963, at the Department's request Pursuant to leave granted at the conclusion of the oral argument, Licensee and the Department have submitted comments on statements of fact made by opposing counsel, which memoranda have been considered by the Commission.

In order to place the proceeding in its proper context, a brief recitation of the underlying factual background is desirable. As noted in the examiner's decision, the present controversy is the latest episode in a protracted dispute between the Department and Licensee dating from 1918 and 1925 when the two hydroelectric plants known as Copco No. 1 and Copco No. 2 were constructed on the Klamath River in California a few miles below the Oregon border.[3] These dams were too high to permit fish migrations and Licensee therefore constructed a hatchery a short distance below the dams on Fall Creek, a tributary of the Klamath River, conveying the facility to the State in 1919. In 1925 fish trapping facilities and an egg collecting station were constructed and similarly conveyed to the State. The Fall Creek hatchery was operated and maintained until 1948 when it was discontinued as uneconomical. Use of the trapping and egg collecting facilities was continued until the construction of the Iron Gate Development, which includes new facilities for these purposes.

Operation of the existing hydroelectric plants as peak-loaded facilities with alternate storage and release of large volumes of water produced severe changes in the downstream river level and eventually led to the filing of a suit by the State of California in 1950 to enjoin the abnormal fluctuations as a continuing public nuisance. Following a course of extended but inconclusive litigation, Licensee filed an application in January 1957 for amendment of the license to authorize construction of the Iron Gate Development, approximately eight miles below Copco No. 2, the primary purpose being to even out the flows below the Copco plants. On July 27, 1958, Licensee and the Department entered into an agreement under which the Department withdrew its informal objections to the proposed Iron Gate Development and acknowledged that the construction thereof would serve to reregulate the flow of the Klamath River in a manner satisfactory to the State. Licensee agreed that it would construct the permanent fish trapping and egg collecting facilities which are now a part of the development. The necessity for the construction of a fish hatchery at Iron Gate expressly was preserved for future determination, Article 6(b) of the agreement providing" * * * that the right is reserved to all parties hereto to be heard in any future proceedings in regard to fishery facilities, other than the fish trapping and egg-collecting facilities . . ." The agreement was made a part of the record in the 1959 proceeding and was relied on by the examiner in denying a finding proposed by the

---

[2] Representatives of the Department of the Interior and the California Senate Fact Finding Committee on Natural Resources were present at the hearing but did not enter formal appearances nor did they participate therein.

[3] The Klamath River in California and Oregon was held to be a navigable water in the United States in *The California Oregon Power Company*, 13 FPC 1, 12.

Department implying a determination that the hatchery was to be constructed as a condition of the license.[4] No exceptions were filed to the examiner's approval of the application for construction of the Iron Gate Development and, on January 13, 1960, the decision was adopted by order of the Commission.[5]

On March 27, 1961, the Commission, pursuant to application of Licensee, issued an order further amending the license to authorize certain requested changes in design and in the timing of construction.[6] Articles 49 and 50, as presently constituted,[7] were included in the license at that time. These Articles provide as follows:

Article 49. The Licensee shall construct, maintain, and operate or shall arrange for the construction, maintenance, and operation of artificial propagation facilities and such other permanent fish facilities and protective devices including, but not limited to, fish hauling trucks, fish screens or ladders, and comply with such reasonable modifications in project structures and operation in the interest of fish life as may be prescribed hereafter by the Commission upon the recommendation of the Secretary of the Interior and the California Department of Fish and Game, after notice and opportunity for hearing.

Article 50. The Licensee shall construct, concurrently with the construction of Iron Gate Dam, and thereafter operate and maintain permanent fish trapping, collecting, holding, and spawn-taking facilities and appurtenances at or near and downstream from Iron Gate Dam as may be prescribed hereafter by the Commission upon the recommendation of the Secretary of the Interior and the California Department of Fish and Game, after notice and opportunity for hearing.

Construction of the Iron Gate Development, including the fish trapping and egg collecting station, was undertaken in February 1960 and completed in January 1962 at a claimed cost of approximately 8.4 million dollars. In conformity with the license, an 18,000-kilowatt generator connected to a 25,000-horsepower turbine has been installed and is in operation.

One of the issues under dispute in the hearing involved the size of the hatchery as proposed by the Department. At the examiner's request a meeting was held between Licensee and the Department after conclusion of the hearing at which the parties signed a stipulation agreeing to the specifications of the hatchery facilities which would be built if required by the Commission. The stipulation, filed August 17, 1962, is without prejudice to Licensee's position that there is no need for a hatchery and that, if a hatchery is found to be required, it is not liable for the costs associated with the construction, operation, or maintenance thereof. Construction of the fishery facilities as originally proposed by the Department in 1961 was estimated to cost $1,003,020. Although no computations have been made as to the cost of the stipulated facilities, the fact that the total weight of fish to be produced has been lowered in the stipulation from 121,500 pounds to 50,000 pounds per year indicates that the cost of construction will be substantially less than the million dollar figure. The staff has estimated that annual operating and maintenance costs will be reduced from $95,256 which would have been needed to run the proposed facility to approximately $54,278 for those stipulated in the agreement.

[4] 23 FPC 61, 68.

[5] *The California Oregon Power Company*, 23 FPC 59.

[6] *Ibid.*, 25 FPC 579.

[7] Analogous provisions were contained as Articles 42 and 43 in the 1960 license amendment, accepted by the Licensee on January 26, 1960. Article 43, which was similar to present Article 49, was incorporated after consultation with the U.S. Fish and Wildlife Service and the Department, and in line with a modification suggested by Licensee in a letter to the Commission filed September 9, 1957. The March 1961 amendments were accepted by the Licensee on April 10, 1961.

Upon our consideration of the record and the oral arguments presented by counsel, we are of the opinion that the Licensee properly should be required to construct a hatchery of the capacity provided in the stipulation to compensate for the spawning areas which have been rendered inaccessible by the dam's construction. The costs of operation and maintenance of the fish facilities, however, should not, we believe, be assessed wholly against the Licensee. Instead, and assuming that the Department will be the operating agency, we shall direct Licensee to reimburse the Department for 80 percent of the annual expenses incurred in the operation and maintenance.

There is no question that the Commission has the power to require construction of the requested facilities by the Licensee. The question of jurisdiction over Project No. 2082 was considered in the original *California Oregon Power Company* case, 13 FPC 1,[8] and was determined to vest in the Commission generally under Part I of the Federal Power Act on the ground of navigability of the Klamath River. In addition, the Commission found that the project would utilize surplus water from the Link River Dam, a "Government dam" within the definition of Section 3(10) of the Act, and therefore was subject to our licensing authority under Section 4(e). Inclusion of the Iron Gate Development with the previously constructed developments was affirmed by the Commission in its January 1960 order. It is clear that the Commission may require the construction, maintenance, and operation of fishways by a licensee. Section 10(a) of the Act requires the Commission, before issuing a license for hydroelectric development, to find that the project shall be such as in the judgment of the Commission will be best adapted to a comprehensive plan of development of the water resources for power and all other beneficial public uses. This provision has been interpreted to embrace the conservation, preservation, and enhancement of anadromous fish resources, and the Commission, on a number of occasions, has directed the inclusion of fish facilities in licensed projects where appropriate.[9] Licensee has conceded that the Commission has the power and obligation in the present proceeding" . . . to take such measures as are reasonably necessary to preserve fish and wildlife."

The factual evidence presented by the Department is amply covered in the examiner's decision and need not be repeated herein. Although Licensee maintained that the Department has not established the need for a hatchery at Iron Gate, and questioned the accuracy of the Department's estimates as to the number of fish formerly spawning above the site of the Development, it admitted that some spawning and rearing areas have been eliminated by the Dam's construction. Licensee argued, however, that normal runs will be sustained by the spawning grounds located below Iron Gate. The examiner concluded that while the Department's estimate that 57.1 percent of the fish runs at Klamathon Racks spawned above the Iron Gate site was open to question, the estimates were the best available and do support the necessity for additional fishery facilities at Iron Gate to replace the natural hatching and incubation process that would normally have occurred in the lost spawning areas. He also found no apparent evidence in the record to support Licensee's assertion that the fish would turn back on reaching the Dam and spawn downstream.

---

[8] Opinion No. 266, 13 FPC 1, rehearing denied March 29, 1954, supplemental Opinion No. 266–A, 15 FPC 14, affirmed 239 F. 2d 426 (CADC, 1956).

[9] *City of Tacoma, Washington*, 10 FPC 424 (1951); *Portland General Electric Company*, 10 FPC 445 (1951); *Idaho Power Company*, 14 FPC 55 (1955); *City of Eugene, Oregon*, 14 FPC 408 (1955); *Puget Sound Power and Light Company*, 15 FPC 1496 (1956); *Portland General Electric Company*, 17 FPC 58 (1957); *Puget Sound Power and Light Company, et al.*, Projects Nos. 943 and 2114, Order Directing Modifications in Rock Island Dam Fishways, issued October 24, 1962, 28 FPC 718.

Licensee has continued in its exceptions to assert that there is no evidence to support the finding that (1) there are not sufficient spawning grounds elsewhere in the river to support the runs which might have spawned in the eliminated area, or (2) if there are such spawning grounds, they will not be used by the fish. Attacking the Department's estimates of the number of fish formerly spawning above Iron Gate as "completely speculative", it argues that without more definite evidence the need for a hatchery has not been established with adequate certainty. It also contends that the improvement of conditions for anadromous fish runs in the river and of the recreational potential[10] in the upper Klamath area resulting from the construction of Iron Gate Dam more than satisfy the obligations of Licensee and its ratepayers to the public, stating:

> In contrast to the public benefit already conferred by the company and its ratepayers, the benefit which might be realized by the construction of further fishery facilities is insignificant. We have already shown that there is no substantial evidence in the record to support a need for a hatchery. If no need can be shown the prospect for benefit is obviously small. In the face of these circumstances, it is apparent that the point of diminishing return for investment of Licensee's dollars in fishery facilities in the upper Klamath has long since been reached. The Licensee cannot in good conscience be required to pay more.

In support of its position that further expenditures should not be required of it for the development of natural resources, Licensee has cited certain of the past decisions of the Commission. A reading of those cases will reveal, however, that the Commission thoroughly considered on each occasion the effect of the proposed development on the anadromous fish population and found either a negligible result or made suitable provision to insure the perpetuation of the fish resource. Thus, in the *Portland* case,[11] the Commission rejected a request for fish facilities more extensive than those proposed in the application on a finding that the Deschutes River above the Pelton project site ". . . is not now a relatively large producer of anadromous fish and the likelihood of its becoming so in the near future is relatively remote." The cost of fish facilities installed at the project may amount to over five million dollars out of a total cost of approximately $20,575,000. In *City of Tacoma*[12] the Commission directed the licensee to install various fish facilities at an estimated initial cost of $7,100,000. The ultimate cost of facilities and improvements for the fishery resources program was expected to approximate $9,465,000 with an annual cost of operation and maintenance estimated at $610,000. It may be noted that the licensee proposed to construct and operate extensive fish hatchery facilities as a complement to the other fish protection measures. In *City of Eugene*,[13] the provisions in a conservation agreement between the licensee and the State Game Commission were deemed adequate to provide protection for the fishery resource in view of evidence that anadromous and fresh water fish did not ascend the river to the project area. Finally, in the *Idaho* case,[14] a provision was included for the licensee's construction of fishery facilities in recognition that the proposed Oxbow, low Hells Canyon and Brownlee developments on the Snake River ". . . would adversely affect the fish and wildlife resources of the area, and particularly the anadromous fish." The decision shows that an expenditure of about

[10] A reservoir of approximately 1,200 surface acres has been created which is available to the public.

[11] 10 FPC 445 at 450. The decision of the Court of Appeals vacating the Commission's order, 211 F. 2d 347, was in turn reversed in *F.P.C. v. Oregon*, 349 U.S. 435, 75 S. Ct. 832.

[12] 10 FPC 424, 428–432, 436–439, affirmed 207 F. 2d 391, *cert.* denied 347 U.S. 936.

[13] 14 FPC 408, 413, 418.

[14] 14 FPC 55, 63, 77, affirmed 237 F. 2d 777, *cert.* denied 353 U.S. 924.

five million dollars was anticipated for the fishery program, exclusive of a low barrier dam which might be needed.

The cases relied upon by Licensee not only fail to afford support for its claim, but serve to demonstrate the importance attributed by the Commission to the preservation of existing fish resources in the comprehensive development of the nation's waterways. We agree with the examiner that without a hatchery there can be no assurance that the fishery resource will be preserved and maintained at a level approximately equal to that which existed prior to construction of the Iron Gate Development. As brought out in the record, Licensee could have applied for authorization to change its method of operation of the Copco plants, thereby obviating the necessity for the reregulating facility and leaving the spawning areas undiminished. For purely economic reasons it chose not to do so, and has created an impassable barrier which the evidence indicates will have a deleterious effect on the pre-existing fish population. Moreover, the evidence clearly establishes that construction and operation of the fish hatchery and related facilities, whether of the extent specified in the Department's petition or of the more limited capacity called for in the stipulation agreements, will not render the Iron Gate project economically infeasible.[15]

Licensee has excepted to a statement of the examiner tying the hatchery to the Article 50 facilities built under the terms of the July 1959 agreement and since conveyed to the State as elements necessary to a complete fishery facility. In view of the fact that these facilities were constructed solely to replace the trapping and egg collecting station formerly situated at Fall Creek, the argument of Licensee that its assumption of the cost of their construction should not influence the determination regarding responsibility for the hatchery construction costs is well taken and is accepted.

Since Licensee has created the situation which necessitates the fish hatchery, it is no more than reasonable to require that it pay the cost of construction thereof. For this same reason, it must also be required to pay for a substantial portion of the costs involved in the operation and maintenance of the facility. Only in this manner will the taxpayers of the State of California be saved from the imposition of a burden in the form of annual operating and maintenance expenses arising from an election of Licensee in a situation where an alternative course of action could have been selected by it which would not have necessitated the hatchery facilities. Licensee's argument that it should not be required to pay the cost of operation and maintenance on the basis of Section 5938 of the California Fish and Game Code and of the State policy as expressed therein is unavailing, as is its contention that the question as to who shall pay these expenses ". . . is a matter between the State and the Company." Whether the State Legislature intended that the statutory provision would be applicable to federally licensed projects or, as alleged by the Department, the section refers only to hatcheries constructed pursuant to State requirement, is wholly immaterial since the Federal government, in its enactment of the Federal Power Act, has occupied the entire field of licensing power projects on navigable and interstate water, to the exclusion of concomitant state jurisdiction.[16] That no residual or supplementary

[15] Although suitable regulation of the river flow could have been achieved through operating Copco No. 1 and Copco No. 2 as steady flow plants rather than as peak-load facilities, and the Commission could have directed Licensee so to modify its operations, this would have resulted in a loss of one-half of the 56,000 kw generating capacity of those plants. As noted earlier, Licensee has installed 18,000 kw capacity at the Iron Gate Development. At $210 per kw, the average cost given by Licensee for its hydroelectric facilities, the loss of 28,000 kw would have cost it $5,880,000.

[16] *State of Washington Dept. of Game* v. *F.P.C.*, 207 F. 2d 391; *F.P.C.* v. *Oregon*, 349 U.S. 435.

control with respect to the determination of necessary provisions for maintenance of the fish resource has been left to the states was indicated in the passage of the Fish and Wildlife Coordination Act,[17] which contemplates that power companies operating under a federal license would be required to make adequate provision for fish conservation as a condition of the license.

We are not convinced, however, that Licensee should be required to pay the full costs involved in operating and maintaining the hatchery and related facilities.[18] Some sharing in costs already is envisioned in Item No. 1(c) of the stipulation as agreed to by the parties. Reregulation in the flow of the Klamath River by Iron Gate Dam will not only restore the downstream reaches to the condition which existed prior to 1918 but will also serve to diminish or possibly even eliminate destructive natural fluctuations in the river level, particularly in those reaches contiguous to the Development. To this extent, the river and the enjoyment thereof by the people of the State of California will be enhanced over its original condition. Availability of the Iron Gate Reservoir to the public for lake fishing, boating, swimming, and other recreational activities likewise indicates that the advantages to be derived from Licensee's election to construct the Iron Gate Development are not all one-sided. In our opinion, an equitable division of costs will be achieved, commensurate with the benefits attained, if Licensee is required to construct the hatchery and, again assuming State operation, to pay the State for 80 percent of the yearly costs of operation and maintenance of all fishery facilities at the Development. Although we are unable to order the State of California to assume the remaining 20 percent of the operation and maintenance expenses, we believe that the apportionment of costs as herein set out is reasonable and will be so considered by the State agency. Apportionment of the costs in this manner also will provide the State with a financial incentive to assure economy of operation of the fishery facilities. Moreover, while no major difficulties are anticipated under the arrangement, we shall retain continuing jurisdiction to settle possible disputes which may arise over the determination of the proper annual amount to be charged Licensee by the State.

The Commission further finds:

(1) Iron Gate Development is a unit of Project No. 2082, licensed to Pacific Power & Light Company, and is situated on the Klamath River, a navigable water of the United States as previously found by the Commission.

(2) Iron Gate Development has been constructed by Pacific Power & Light Company and is now in operation.

(3) Iron Gate Development blocks and prevents the seasonal migration of anadromous fish to approximately 16 miles of spawning gravels in the Klamath River and its tributaries between the Iron Gate Development and the Copco No. 1 and Copco No. 2 hydroelectric plants.

(4) To compensate for the loss of the spawning areas described in Finding (3) hereof, a fish hatchery should be constructed, operated, and maintained at

---

[17] 16 U.S.C. 661, *et seq.*

[18] Both the Department's brief and that of the Licensee include the question of responsibility for the costs of operation and maintenance of the fish trapping and egg collecting station among the issues to be decided herein. Licensee's statement that the Department undertook to operate these facilities and indicating that the matter is settled is contradicted in the exchange of correspondence between Licensee and the Department wherein the latter was permitted to operate the facilities temporarily in full recognition by both parties that such action was not determinative of the issue as to their continued operation and maintenance. The presentations made by the parties do not distinguish between the facilities on this point nor do they in any way indicate that the matter is now ripe for decision. Our determination herein with respect to operation and maintenance of the hatchery facility, accordingly, is also dispositive of this issue.

Iron Gate Development of a size and capacity to annually hatch and rear 200,000 yearling steelhead trout to a total weight not to exceed 20,000 pounds, 75,000 yearling silver salmon to a total weight not to exceed 5,000 pounds, 6,000,000 fingerling king salmon to a total weight not to exceed 20,000 pounds, and 5,500,000 king salmon swim-up fry; provided, not more than 12,800,000 king salmon eggs should be required to be accommodated in any year at the Iron Gate hatchery facility.

(5) Licensee has constructed a fish trapping and egg collecting station at the Iron Gate Development of sufficient size and capacity to obtain the eggs for supplying a hatchery of the aforesaid size and capacity.

(6) Iron Gate Development will be economically and financially feasible if the aforesaid fish facilities are constructed, operated, and maintained in the manner as hereinafter provided.

(7) The construction, operation, and maintenance of a fish hatchery, as hereinafter provided, of the aforesaid size and capacity is necessary in the public interest to sustain the anadromous fishery resource of the upper Klamath River at a level approximately equal to that which existed prior to the construction of the Iron Gate Development.

The Commission orders:

(A) The license for Project No. 2082, as amended, is further amended to provide as follows:

Article 49. The Licensee shall construct or arrange for the construction, at its expense, of a fish hatchery at Iron Gate Development, together with supplemental structures and ancillary equipment as detailed in the agreement filed with the Commission on August 17, 1962, by the State of California Department of Fish and Game and the Licensee, of a size and capacity to annually hatch and rear 200,000 yearling steelhead trout to a total weight not to exceed 20,000 pounds, 75,000 yearling silver salmon to a total weight not to exceed 5,000 pounds, 6,000,000 fingerling king salmon to a total weight not to exceed 20,000 pounds, and 5,500,000 king salmon swim-up fry; provided not more than 12,800,000 king salmon eggs shall be required to be accommodated in any year. Plans for the aforesaid facility shall be prepared by Licensee, in cooperation with the State of California Department of Fish and Game and the U.S. Fish and Wildlife Service, Department of the Interior, and shall be submitted to the Commission for approval within 60 days of the issuance of this order. The facility shall be constructed within one year from the date of approval of the plans by the Commission.

Article 50. Licensee shall reimburse the State of California Department of Fish and Game for 80 percent of the combined annual cost of operation and maintenance of the facilities and appurtenances constructed pursuant to Article 49 and of the permanent fish trapping, collecting, holding, and spawn-taking facilities and appurtenances constructed at Iron Gate Dam. Should Licensee and the State of California Department of Fish and Game fail to agree on the amount to be paid by the Licensee for this purpose, the Commission reserves the right to determine the amount of such annual payment, after notice and opportunity for hearing.

(B) Pending completion of the aforesaid facility, Licensee shall take all reasonable measures to provide for maintenance of the Klamath River fishery resource.

(C) To the extent not inconsistent herewith, the decision of the examiner is affirmed.

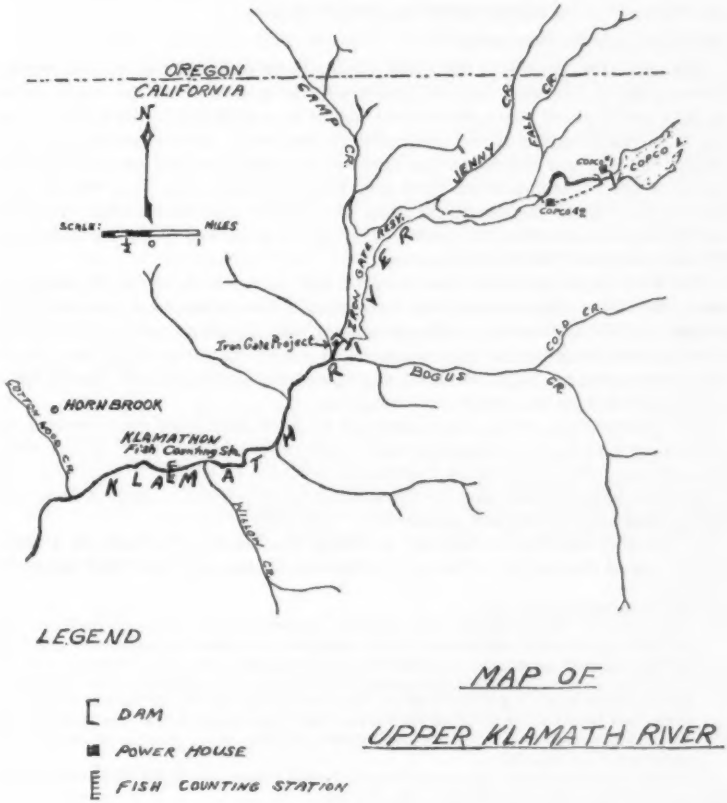
(D) All exceptions to the decision of the examiner not herein granted are hereby denied.

(E) This order amending the license for Project No. 2082 shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for Licensee and returned to the Commission within 60 days from the date of its issuance.

INITIAL DECISION

UPON PETITION BY THE STATE OF CALIFORNIA TO REQUIRE LICENSEE TO CONSTRUCT, OPERATE, AND MAINTAIN A FISH HATCHERY

(Issued November 14, 1962)



MAP OF

UPPER KLAMATH RIVER

LEVY, *Presiding Examiner:* This proceeding is before the Federal Power Commission by reason of a petition filed by the California Department of Fish and Game (Department) on August 21, 1961, requesting that Pacific Power and Light Company (Licensee) be required to construct, operate, and maintain a

fish hatchery at its recently completed Iron Gate Dam (Project No. 2082) pursuant to Article 49 of the license.[1]

The Licensee, in its Answer of September 13, 1961, denied the necessity for any fishery facilities to maintain normal fish runs in the Klamath River, or that it should be required to construct or maintain such facilities. On January 30, 1962, the Commission issued an Order setting the matter down for hearing and prescribing certain prehearing procedures, including the filing and exchange of prepared testimony and exhibits. After the close of the hearing, held June 4th and 5th in San Francisco, Licensee and the Department stipulated, at the request of the Presiding Examiner, to the details of fish hatchery facilities which would be built if required by the Commission. The stipulation filed August 17, 1962 (Appendix A), is without prejudice to the Licensee's position that there is no need for a fish hatchery and that, in any event, it is not liable for construction, operation, or maintenance.

Background of the Proceeding

The instant proceeding is the latest episode in an extended fishery controversy between the Department and the Licensee[2] that goes back to the construction in 1918 and 1925, of two hydroelectric plants known as Copco No. 1 and Copco No. 2 on the Klamath River in California just below the Oregon border (see Map). In lieu of a fish ladder the Licensee constructed a fish hatchery at Fall Creek, a short distance down river and, under an agreement with the Department, conveyed the facility to the State of California in March 1919. In 1925, the Licensee constructed and conveyed to the State an egg collecting station at Klamathon some 15 miles downstream.

The Fall Creek hatchery was operated and maintained by the Department until 1948 when "operations were discontinued due to the high cost of maintaining the installation and high operational cost of raising fish". (23 FPC 66) The egg collecting station was continued in operation by the Department until the construction by the Licensee of new egg collecting facilities in March 1962, pursuant to Article 50 of the Iron Gate license.[3]

The hydroelectric plants were operated to meet peak load requirements by alternately storing and releasing water with increasingly severe downstream fluctuations. The Department maintained, and the Presiding Examiner in the license proceeding found, that the fluctuating water levels ". . . have a decidedly detrimental effect on fish and aquatic life." (23 FPC 66)

In 1950 the Department filed suit to compel the Licensee to construct a regulating dam at Iron Gate. After protracted negotiations and the commencement

[1] Article 49 reads as follows:

Article 49. The Licensee shall construct, maintain, and operate or shall arrange for the construction, maintenance, and operation of artificial propagation facilities and such other permanent fish facilities and protective devices including, but not limited to, fish-hauling trucks, fish screens or ladders, and comply with such reasonable modifications in project structures and operation in the interest of fish life as may be prescribed hereafter by the Commission upon the recommendation of the Secretary of the Interior and the California Department of Fish and Game, after notice and opportunity for hearing.

[2] "Licensee" also includes, where applicable, Pacific Power and Light Company's predecessor, California Oregon Power Company (Copco).

[3] Article 50 (25 FPC 579, 581) reads as follows:

The Licensee shall construct, concurrently with the construction of Iron Gate Dam, and thereafter operate and maintain permanent fish trapping, collecting, holding, and spawn-taking facilities and appurtenances at or near downstream from Iron Gate Dam as may be prescribed hereafter by the Commission upon the recommendation of the Secretary of the Interior and the California Department of Fish and Game, after notice and opportunity for hearing.

of license[4] proceedings to authorize the construction and operation of a regulating dam, the Department and the Licensee entered into an agreement on July 27, 1959, Exhibit 62 in the license proceeding, under which the Department withdrew its objections to the Iron Gate development as proposed by the Applicant. The agreement provided that the Licensee would construct a dam at Iron Gate for the principal purpose of regulating the flow of water in the Klamath River, and would build fish trapping and egg collecting facilities in accordance with plans and specifications to be furnished by the Department. The necessity for the construction of a fish hatchery at Iron Gate was expressly reserved for future determination.[5] Paragraph 6(b) of the Agreement provides as follows:

> The State, the Department and the Commission shall forthwith cause to be withdrawn and dismissed all protests and interventions with respect to the pending applications of Copco before the Federal Power Commission in Project No. 2082, and before the State Water Rights Board in Application No. 17527; provided, that *the right is reserved to all parties hereto to be heard in any future proceedings in regard to fishery facilities, other than the fish trapping and egg collecting facilities referred to in paragraph 3 thereof.* [Emphasis supplied.]

Construction of the Iron Gate facility, in a single stage rather than the two stage construction originally contemplated, was completed in January 1962 at a cost in excess of $8,000,000. Of this amount more than $700,000 was represented by the cost of building the fish trapping and egg collecting facilities. The Iron Gate Development as completed consists of an earthfill dam about 173 feet high with crest elevation of 2,338 feet, a concrete side channel spillway of the overflow type in the right abutment, a reservoir with normal water surface at elevation 2,328 feet and a capacity of about 58,000 acre-feet, a tunnel through the right abutment which will serve as a sluice and diversion during construction, an intake structure, a power conduit through the left abutment, a penstock, a powerhouse with one 25,000-horsepower turbine connected to an 18,000-kilowatt generator, a substation adjacent to the powerhouse, a 66 kv transmission line extending to COPCO No. 2 Switchyard, a fish ladder and fish trapping facilities complete with appurtenant facilities, and other electrical and mechanical facilities. The existing fish facilities are being operated by the Department temporarily, with the consent of the Licensee, pending determination of responsibility for operation and maintenance (See Exh. B attached to California's Reply Brief).

The Issues

The stipulation of August 17, 1962, covering the details of fish hatchery facilities, if required, leaves the following issues for determination:

1. Are additional fish rearing facilities required at Iron Gate to preserve and maintain the fishery resource at a level approximately equal to that which existed before the construction of the Iron Gate Development?

2. If so, who is responsible for construction, operation and maintenance of the fishery facilities?

---

[4] The full history of the proceedings in Project No. 2082 is stated in 23 FPC 59, 62 (1960). The license was further amended at 25 FPC 579 (1961) so as to authorize changes in the design from a concrete arch dam to an earth-filled dam, the erection initially to its ultimate height, and reduction in the size of the generator from 25,000 to 18,000 kilowatts.

[5] The Presiding Examiner denied a request by the Department for the inclusion in the findings of language which could be construed as implying a determination that fish hatchery facilities ought to be constructed as a condition of the license. (23 FPC 68, 71)

The Evidence

The Department's experts, fishery biologists Skinner, Croker, Bailey, Hill, and Fraser testified in substance that the Iron Gate Development prevents access by salmon and steelhead to about 16 miles of spawning gravel between Copco Dam and Iron Gate which historically has been utilized by anadromous fish to spawn and reproduce, and that a hatchery is needed to replace these spawning areas which have been eliminated by the construction of the Iron Gate Development. Croker testified that the general trend of salmon runs above Klamathon is downward (Exh. 11–A) and that, based on live fish counts, aerial surveys, carcass and redd counts, 57.1 percent of the fish passing Klamathon spawned above Iron Gate.

Robert Macklin, the Department's Supervisor of Fish Hatcheries, proposed the construction of a fish hatchery at Iron Gate, based on runs of 15,000 king salmon at Klamathon, designed to incubate, hatch, and rear annually 200,000 yearling steelhead trout, 75,000 yearling silver salmon, and 6,000,000 fingerling king salmon, to a total weight of 121,500 pounds, at an estimated construction cost of $1,003,020, and an annual operating and maintenance cost of approximately $95,256. (Exh. Nos. 6, 7, 8, 9)

J. C. Boyle, Licensee's Vice President, testified in support of the Company's position. Licensee's fishery biologist, Dr. Hamilton, conceded the loss of spawning and rearing areas eliminated by the construction of Iron Gate Dam. His proposed hatchery facilities were smaller and less costly than those proposed by the Department. (Exh. Nos. 15–18, inclusive) The facilities detailed in the stipulation (Appendix A) are also less costly than the Department's original proposals. The total weight of all fish produced is reduced from 121,500 pounds to 50,000 pounds. The holdover of one million fingerlings for fall release is eliminated. Reductions in construction costs are effected by the substitution of rearing ponds for nursery ponds, reduction in the area required to accommodate the hatchery troughs, the number of incubation trays, and the elimination of all of the 14 nursery ponds originally proposed. The Staff estimates that annual operating and maintenance costs will be reduced from $95,256 to $54,278. (Staff br. p. 11)

Discussion

1. Licensee maintains that the Department has not established the need for a fish hatchery at Iron Gate, and questions the accuracy of its estimates as to the number of fish spawning above the Iron Gate Development. It argues that normal runs will be sustained by spawning grounds *below* Iron Gate Dam. The testimony indicates, however, that Iron Gate Dam, completed in 1961, prevents access by salmon and steelhead trout to about 16 miles of spawning gravel, thereby eliminating one of the most popular stream fishing areas in the upper Klamath River. (23 FPC, 66, 67) Licensee's fisheries biologist, Dr. Hamilton, conceded that ". . . the Iron Gate reservoir has eliminated whatever salmon and steelhead spawning areas existing between Iron Gate and COPCO Dam . . ." (Tr. 246) and that ". . . about 970 steelhead were trapped at the site this spring after the Iron Gate egg-taking station was put into operation on February 27, 1962." (Tr. 278, 286)

The historic decline of Klamath River king salmon is documented in Exhibit 11–A, the most detailed data of record. While the accuracy of the Department's estimate that 57.1 percent of the fish runs at Klamathon spawned above Iron Gate may be questioned, these estimates are the best available and do support the necessity for additional facilities to replace the lost spawning areas above Iron Gate Dam. I conclude that facilities for the artificial propagation and the perpetuation of the anadromous fish are required at Iron Gate to preserve and

maintain the fishery resource at a level approximately equal to that which existed before the construction of the Development. The question remains as to whether a hatchery is required at Iron Gate.

Pursuant to the agreement of July 27, 1959, and Article 50 of the Iron Gate license, (Project No. 2082), Licensee has constructed fish trapping and egg collecting facilities which went into operation on February 27, 1962. The Department argues that without the further construction of a hatchery, the egg collecting station is incomplete since "the eggs cannot be simply released back into the river. It is needed as a substitute for [the] natural hatching and incubation process that would normally occur above the Iron Gate Dam had the dam not been constructed". (Tr. 18) The Licensee suggests that any fish which would penetrate the river as far as the Iron Gate Dam will turn back to find suitable spawning grounds down river, and, if this does not maintain the runs, the fish can be transported downstream to other suitable spawning grounds. There is no assurance, however, or evidence that a sufficient number of anadromous fish reaching Iron Gate Dam will turn back and spawn downstream; or that they can be made to do so even if they are trapped and physically transported to downstream areas. In short, I am unable to conclude from the evidence of record that the upper Klamath fish runs can be maintained at an equivalent level without the construction of additional fish rearing facilities. A hatchery[6] is the established method of insuring that the eggs taken from the fish at the trapping facility are properly incubated, hatched, and reared. Licensee's predecessor had constructed a fish hatchery at Fall Creek in 1919, which was operated and maintained by the Department until 1948. I concluded, therefore, that fish hatchery facilities are required to replace natural spawning eliminated by the dam and to complete the fish trapping and egg collecting station heretofore constructed at Iron Gate. Fortunately, the parties have stipulated to the nature of the hatchery facilities to be built if required. These facilities are described in Appendix A, attached hereto and made a part of this decision.

2. The construction costs of the hatchery, as detailed in the stipulation, should be paid for by the Licensee. This is consistent with the agreement between the Licensee and the Department of July 27, 1959 (Exh. 62) pursuant to which the Licensee built the fish trapping and egg collecting facilities. The hatchery will expand the egg collection station into a complete facility for the maintenance of the fishery resource of the upper Klamath River. The agreement provides (para. 3) for the conveyance of the "permanent fish trapping and egg collecting facilities" to be built by the Licensee, ". . . and title thereto, together with the land upon which they are situate . . ." to the State. Similarly, the complementary hatchery should be conveyed to the State to be owned, operated, and maintained by the Department as an integrated fishery facility. The cost of maintenance and operation, however, should be borne by the Department and the State which will now own, control, and operate the entire facility.

The Department argues that the 1959 agreement is not conclusive since it did not expressly agree therein to operate and maintain the fish facilities. The agreement did leave open the issue of hatchery construction and overall operation and maintenance costs. These are the issues to be resolved in this proceeding.

Operation and maintenance by the State is suggested, however, by the following considerations. Historically, the State operated and maintained the Fall Creek fish hatchery constructed by COPCO and conveyed to the State in 1919.

[6] The Department's witness, Macklin, testified that 15 hatcheries are being operated by the California Department of Fish and Game. (Tr. 145.)

and the fish trapping facilities at Klamathon built by COPCO and conveyed to the State in 1925. The Fall Creek hatchery was abandoned [7] by the Department in 1948 as too costly. The Iron Gate hatchery, which Licensee is now required to build under this order, will substantially replace the Fall Creek hatchery previously operated and maintained by the State.

The Fall Creek hatchery was operated and maintained by the State, as are all 15 State hatcheries, under the California Fish and Game Code. Section 5938 thereof provides in pertinent part:

> Whenever in the opinion of the commission it is impracticable, because of the height of any dam, or other conditions, to construct a fishway over or around the dam, the commission may, in lieu of the fishway, order the owner of the dam completely to equip, within a specified time, on a site to be selected by the department, a hatchery, together with dwellings for help, traps for the taking of fish, and all other equipment necessary to operate a hatchery station, according to plans and specifications furnished by the department. *After such hatchery has been constructed, the department shall operate it without further expense to the owner of the dam except as provided in Sections 5940 and 5941.* [Emphasis supplied.]

The Department argues that the Fish and Game Code of California is inapplicable to a federally licensed power project. The Federal Power Commission has the authority under the Federal Power Act, which it has exercised in appropriate circumstances, to require the construction, operation, and maintenance of fish facilities by the Licensee as a condition of the license. State law, policy, and history are, however, relevant considerations in the exercise of such power. The policy of the State of California, as set forth in its Fish and Game Code, is to share in the expense of maintaining fish runs, disrupted by the construction of hydroelectric projects, by operating and maintaining fish hatcheries constructed by the owner of the project at his own expense. This policy is not in conflict with the Federal Power Act or Commission policy. I see no good reason why it should not be followed in this proceeding.

Here the Department by agreement has obligated the Licensee to convey to the State the fish trapping and egg collecting station which it built and the Department is now operating. The fish hatchery when completed should also be conveyed to the State so that its operation can be integrated with the related fishery facilities.

State ownership and control of the Iron Gate fish facilities should carry with it responsibility for the cost of operation and maintenance. This is consistent with California law, with sound fiscal policy, and with the prior pattern on the Upper Klamath.

The Department argues that it is unfair and inequitable to burden California taxpayers with part of the costs of generating power which is distributed and sold interstate. It is not unfair, however, to require taxpayers to participate in the maintenance of a natural resource from which all benefit. The California legislature long ago decided to share in the expense of preserving fish by operating and maintaining hatcheries constructed by the owners of California dams. Moreover, the taxpayers of California also benefit from the construction of licensed power projects. The ratepayers of California and Oregon may well ask why they should be saddled in perpetuity with the unknown and escalating costs of hatcheries operated by the Department, without cost limitations, for the benefit of all citizens and taxpayers. The objective of the Federal Power Act is

---

[7] After its abandonment, eggs taken at Klamathon were reared at the Department's Mount Shasta hatchery.

the maximum development of the entire water resource including power and recreation[8] as well as fish. I am therefore compelled to reject the position of the Department that the Licensee should, in addition to constructing the hatchery, defray *all* operations and maintenance expense. The history of this project and the facts in this proceeding suggest otherwise.

The Staff brief is silent in respect of who is to bear the cost of operating and maintaining the egg collecting facility at Iron Gate. The Staff proposes, however, that Licensee and the State share equally in the costs of operating and maintaining the fish hatchery to be constructed at Licensee's expense. The State would continue to pay for the annual operating and maintenance expense attributable to an annual average of 3,000,000 Klamath River king salmon eggs presently hatched and reared at its Mount Shasta hatchery for release into the upper Klamath River.

Licensee and the Department oppose the Staff suggestion; Licensee on the ground that it has no obligation to pay for half the operation and that the Staff proposal is a compromise[9] "unsupported by law or reason". The Department argues that hatchery construction should not be conditioned on their acceptance of the obligation to operate and maintain the facility. I have concluded for all the reasons previously discussed that the Department should pay for the entire cost of maintaining facilities it will own, control, and operate in conjunction with numerous other hatcheries throughout the State.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, including the pleadings, the evidence adduced, and the briefs filed, it is found and concluded in addition to the findings and conclusions heretofore stated that:

(1) The erection of the Iron Gate development eliminated approximately 16 miles of natural spawning grounds previously used by king salmon, silver salmon, and steelhead trout.

(2) A fish hatchery, the details of which are described in a stipulation filed with the Commission on August 17, 1962, (Appendix A), is required to sustain the anadromous fishery resources of the upper Klamath River at a level approximately equal to that which existed before the construction of the Iron Gate Development.

(3) The public interest in the conservation and the development of the fishery resources affected by the Iron Gate Development requires the construction of the fish hatchery by the Licensee, and its ownership, operation, and maintenance by the Department as hereinafter provided.

ORDER

WHEREFORE, IT IS ORDERED, pursuant to Articles 49 and 50, Project No. 2082, as amended, subject to review by the Commission that:

(A) The Licensee shall provide for a site and arrange for, and pay for, the construction of a fish hatchery as described in the stipulation filed herein on August 17, 1962, (Appendix A).

(B) Plans for the aforesaid facilities shall be prepared by the Licensee, in cooperation with the State of California Department of Fish and Game, shall be submitted to the Commission for approval within 60 days of the issuance of this

[8] The Iron Gate Development has improved the recreational facilities of the upper Klamath by creating a 1,200 acre reservoir available to the public. (Tr. 181–183.)

[9] The Licensee points out (Reply br. p. 3) that sharing costs will create serious allocation problems with respect to administrative overhead and other costs associated with running the Department and its facilities throughout the State of California.

Order, and shall be constructed within one year from the date of approval by the Commission. Upon completion of the aforesaid facilities, all the fish facilities shall be conveyed by Licensee to the State; provided that the Licensee shall not be required to reimburse the State of California for the cost of operation and maintenance.

WILLIAM C. LEVY,
Presiding Examiner.

APPENDIX A

BEFORE THE FEDERAL POWER COMMISSION

IN THE MATTER OF PACIFIC POWER & LIGHT COMPANY—PROJECT No. 2082

Stipulation

WHEREAS, at the hearing in the above entitled matter on June 5, 1962, Examiner Levy requested that representatives of Licensee and the Department of Fish and Game, State of California (Department) meet within fifteen days after the close of the hearing for the purpose of entering into stipulations sufficient to establish specifications agreeable to both parties for fish hatchery facilities which might be built at Iron Gate if the need for any such facilities is determined in this proceeding; and

WHEREAS, said representatives have met and have agreed upon specifications for said fish hatchery facilities;

Now, THEREFORE, Licensee and the Department and their sucessors and assigns hereby stipulate as follows:

1. If the Commission determines that fish hatchery facilities are required at Iron Gate, said facilities shall be sufficient to accommodate the incubation, hatching, and rearing of the following kinds and numbers of fish each year:

(a) Steelhead trout (*Salmo gairdnerii gairdnerii*) Rear up to 200,000 yearlings to a total weight not to exceed 20,000 lbs.

(b) Silver salmon (*Oncorhynchus kisutch*) Rear up to 75,000 yearlings to a total weight not to exceed 5,000 lbs.

(c) King salmon (*Oncorhynchus tshawytscha*) Rear up to 6,000,000 fingerlings to a total weight not to exceed 20,000 lbs., and release an additional 5,500,000 swim-up fry. Not more than 12,800,000 king salmon eggs are required to be accommodated in any one year by the Iron Gate hatchery facility; provided, however, if the total number of king salmon eggs taken at the Iron Gate egg collection facility in any one year is equal to or less than 15,800,000 the fish hatchery facilities described herein shall not be required to accommodate more than 81% of the total king salmon eggs taken during the year.

2. Heath type incubation cabinets, and rearing troughs and ponds of design and construction specified in Exhibit 6 herein or as modified to the satisfaction of both parties, together with necessary water supply and conduits, of the following number are fully sufficient to accommodate the fish propagation program outlined under paragraph 1 above:

(a) *Steelhead trout:*	
Incubation trays	[1] 0
Rearing troughs	12
Rearing ponds	8
(b) *Silver salmon:*	
Incubation trays	25
Rearing troughs	0
Rearing ponds	2

[1] Salmon trays will accommodate steelhead.

(c) *King salmon:*

Incubation trays	2,133
Rearing troughs	0
Rearing ponds	(2)

The fish propagation facility shall include, but shall not necessarily be limited to, the following supplemental structures of standard construction of the type shown in Exhibit 6, together with such other ancillary equipment necessary to accommodate the facility:

a. Aerator with maximum capacity of 10 c.f.s.;

b. Four family type frame residences;

c. One frame building with sufficient space to accommodate shop, garage and office facilities;

d. One elevated storage bin; and

e. One dry storage building.

IN WITNESS WHEREOF this stipulation was executed as of the 20th day of July, 1962.

STANLEY MOSK,
Attorney General, State of California.
By (S) RALPH W. SCOTT,
BROBECK, PHLEGER & HARRISON,
By (S) JOHN E. SPARKS.

Approved:
DEPARTMENT OF FISH AND GAME,
STATE OF CALIFORNIA.
By (S) W. T. SHANNON,
Its Director.
PACIFIC POWER & LIGHT COMPANY,
By (S) D. R. MCCLUNG,
Its President.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

GEORGE S. HAMMONDS, DOCKET NO. G-16520;[1] SCOTT HAMMONDS, DOCKET NO. G-16521[1]

ORDER TERMINATING PROCEEDINGS IN PART

(Issued March 15, 1963)

On December 21, 1962, George S. Hammonds and Scott Hammonds (Respondents) jointly filed a document entitled "Motion for Commission Action on Motions for Reconsideration of Orders Suspending Increased Rates and for Termination of Proceedings." No protests have been received with respect to Respondents' motion.

By separate orders issued October 14, 1958, the proposed increased rates of Respondents, designated as Supplement No. 3 to George S. Hammonds' FPC Gas Rate Schedule No. 1, and Supplement No. 7 to Scott Hammonds' FPC Gas Rate Schedule No. 1, were suspended until May 1, 1959, when, upon proper

---

[2] Not less than 18 or more than 21.

[1] Consolidated with the proceedings in Docket No. AR61-1, *et al.*, by order issued December 23, 1960, 24 FPC 1121.

motions, they became effective subject to refund. The gas involved in these proceedings, sold to Northern Natural Gas Company (Northern), is from the Ellenburger Formation in the Puckett Field, Pecos County, Texas (Railroad Commission District No. 8).[2] The gas contains a high percentage of carbon dioxide, which must be removed to convert the gas to pipeline quality gas. The increased rates here involved are 16¢ per Mcf, an increase of 1¢ per Mcf, for the sale of gas at the tailgate of the plant, but include a 5¢ per Mcf processing charge by Northern for removal of the carbon dioxide. In effect, Hammonds is receiving a net rate of 11¢ per Mcf for pipeline quality gas.

On January 5, 1959, and February 2, 1959, George S. Hammonds and Scott Hammonds, respectively, filed motions for reconsideration of the suspension orders. Thereafter, on January 30, 1961, Respondents filed motions to terminate these proceedings, and these motions were denied by order of March 29, 1961. Motions for reconsideration of the order of March 29, 1961 were denied by order issued July 21, 1961. As stated by Respondents in the instant motion, the motions filed January 5, 1959, and February 2, 1959, were never acted upon by the Commission. However, the arguments made by Respondents in those motions were answered in the orders of March 29, 1961, and July 21, 1961.

Motions for termination were filed by Respondents in the instant case prior to the termination of the suspension proceedings involving *Phillips* and *Atlantic*, *infra*, whereby those producers were permitted to collect without refund obligation the same 16¢ rate involved here for the same quality of gas from the same formation. Had action been taken upon Respondents' motions at that time consistent with the action taken in *Phillips* and *Atlantic*, the proceedings involving Respondents would also have been terminated. The sales covered by Respondents' rate schedules represent the only jurisdictional sales of Ellenburger gas for which producers are not receiving at least as high a price, without obligation to refund, as that sought herein by Respondents for the same quality of gas.[3] Moreover, Respondents' sales cover only a small portion of the jurisdictional sales made from the Ellenburger formation.

Under the special circumstances set forth above, we conclude that the instant proceedings should be terminated consistent with the action taken in the *Phillips* and *Atlantic* cases. Our action in this case, however, is without prejudice to any action that we may take with respect to Respondents' rates for the sales involved here in connection with the Section 5(a) aspects of the Permian area rate proceeding in Docket No. AR61–1, *et al.*

The Commission finds:

The proceedings in Docket Nos. G–16520 and G–16521 should be terminated insofar as they pertain to the sale of gas from the Ellenburger formation, Respondents' refund obligations with respect to the sale of such gas should be discharged, and in all other respects the proceedings should remain in full force and effect.

---

[2] Respondents state in their motion that gas is being sold from both the Ellenburger and Devonian formations under George S. Hammonds' rate schedule, but only Ellenburger gas is sold under Scott Hammonds' rate schedule. However, acreage dedicated under Scott Hammonds' rate schedule includes the Devonian formation. Respondents' motion relates only to the Ellenburger gas.

[3] See, for instance, *Phillips Petroleum Company*, Docket No. G–17071, order issued May 3, 1960; *Atlantic Refining Company, et al.*, Docket No. G–13919, *et al.*, order issued October 13, 1960; and Opinion No. 328, *Transwestern Pipeline Company, et al.*, Docket No. G–14871, *et al.*, opinion issued August 10, 1959, 22 FPC 391, and order issued in reopened proceedings on July 11, 1962, 28 FPC 109, rehearing denied. August 29, 1962. 28 FPC 393.

The Commission orders:

The proceedings in Docket Nos. G–16520 and G–16521 are hereby terminated insofar as they pertain to the sale of gas from the Ellenburger formation, Respondents' refund obligations with respect to the sale of such gas are hereby discharged, and in all other respects the proceedings shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

CITY OF NEOSHO RAPIDS, KANSAS, DOCKET NO. CP63–142

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 15, 1963)

On November 23, 1962, the City of Neosho Rapids, Kansas, (Applicant) filed in Docket No. CP63–142 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Cities Service) to establish physical connection of its transmission facilities in Lyon County, Kansas, with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in Neosho, all as more fully set forth in the application.

Applicant proposes to construct and operate a distribution system in Neosho as well as a 1 mile lateral transmission line extending from the proposed distribution facilities to Cities Service's transmission line. The estimated total cost of the proposed facilities is $45,000, which cost will be financed by the issuance of General Obligation and Revenue Bonds.

Applicant's estimated third year peak day and annual natural gas requirements are 120 Mcf and 10,500 Mcf, respectively.

On December 10, 1962, Cities Service filed an answer to the subject application stating that it had no objection to the granting of the application.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on February 2, 1963 (28 F.R. 1085). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) Applicant, City of Neosho Rapids, Kansas, is a municipal corporation incorporated under the laws of the State of Kansas and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in the City of Neosho Rapids.

(3) It is necessary and desirable in the public interest that Cities Service be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 120 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Cities Service within one year from the date of issuance of this order.

(5) The requirement that Cities Service serve Applicant, as proposed, will not place any undue burden upon Cities Service nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Cities Service Gas Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 120 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application.

(B) Applicant shall be prepared to receive natural gas from Cities Service within one year from the date of issuance of this order.

(C) Cities Service shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

MEMORANDUM OPINION AND ORDER REJECTING PROPOSED RATE INCREASE FILINGS, DISALLOWING PROPOSED INCREASES IN RATES AND ORDERING REFUNDS

(Issued March 15, 1963)*

Syllabus

1. Reaffirming *Pure Oil*, Commission *finds* respondents lack "contractual support" necessary to permit proposed increases to be filed—failing to show that their gas is comparable to West Texas gas or that their favored nation clauses have been triggered. PP. 501; 503.
2. Commission *holds* it will not approve a rate increase based upon another rate increase which has been rejected. PP. 501; 504.
3. Commission *rejects* contention as to mootness—fact that producer filed renegotiated rate lower than, and in place of favored-nation clause, does not moot triggering issue for period during which producer's favored-nation rates were allegedly effective. PP. 501; 505.
4. Respondents' argument that by "accepting" their rate filings, Commission later was barred from rejecting them for lack of contractual support has little legal basis. P. 503.
5. Producer filing a favored-nation rate increase must show: (1) the validity of the triggering rate, and (2) the justness and reasonableness of the increased rate. P. 504.

---

* Initial decision appears on p. 510. Memorandum Opinion Opinion No. 382–A issued April 26, 1963, denied rehearing and stay, 29 FPC 851. Affirmed, *Shell Oil Co.* v. *F.P.C.*, 334 F. 2d 1002 (CA3–1964).

6. Commission *rejects* proposed rate increase filings and *disallows* proposed increases in rates in proceeding arising under Section 4, of the Natural Gas Act. P. 505.

Commissioner Morgan *concurring.*
Commissioner Ross *concurring*, joins in Commissioner Morgan's statement.

Joseph C. Spalding, for Shell Oil Company.
R. A. Lynch and *Albert J. Feigen*, for Claude E. Aikman.
H. W. Varner, Roland B. Voight and *Homer F. Penn*, for the Superior Oil Company.
John A. Ward, III; Charles F. Heidrick, J. Colbert Peurifoy, Robert E. May, Porter E. Noble and *Richard F. Generelly*, for Sun Oil Company.

Robert W. Henderson, for A. G. Hill, New Seven Falls Company, Lyda Hill Trust Estate and Albert Hill Trust.
C. Hayden Ames, for San Diego Gas Electric Company.
Samuel B. Ross, for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

This proceeding involves the most-favored-nation clauses in certain producer contracts executed prior to April 3, 1961.

Typically, as here, a most-favored-nation contract clause provides that if a purchaser of gas from a certain producer pays another producer in the same area a higher rate, the first producer may raise or escalate his rate to that purchaser correspondingly. The clause is said to be activated or "triggered" by the purchaser's paying the other producer a higher rate. But in order for "triggering" to occur, where (as here) the contract so provides, the producer filing the most-favored-nation rate increase must show that the other producer is the type of seller contemplated and produces in the area indicated in the contract, that the gas being purchased from the other producer is comparable gas, and that the rate being paid for it is "higher" in fact as well as in appearance. By showing that these and any other conditions precedent (to triggering) exist, the producer filing for the escalated increase shows that his proposed increase has the "contractual support" or consent of his purchaser; and the increased rate may be accepted for filing.[1] If he fails to show that these necessary conditions exist, his

[1] Thereafter, the producer must show that his proposed increase is "just and reasonable." The fact that his increase was filed because his most-favored-nation clause was triggered in no way eliminates his burden of proving his proposed rate economically justifiable.

filing is rejected as a contractually unauthorized, unilateral rate increase.[2]

"Artificial" rate increases contemplated by most-favored-nation clauses such as these—that is, increases based purely on contract provisions and not on cost or on other relevant economic grounds—are largely forbidden in contracts filed with us which were executed after April 2, 1961.[3]

Issues Presented

(1) Were the "favored-nation" escalation clauses contained in the contracts which the 15 respondents herein executed before April 3, 1961, "triggered" by El Paso Natural Gas Company's purchase at a "higher price" of gas from the West Texas Gathering Company? If they were, then the "contractual support" or consent of El Paso that must exist before the respondents' increased rates may be accepted for filing has been provided. Although El Paso paid West Texas a number of cents more per Mcf than the contracts between El Paso and the respondents herein called for, this would not constitute a "higher price" if the latter contracts are interpreted to take account of evidence which shows that the West Texas gas was of higher quality and usefulness to El Paso than respondents' gas.

(2) Are favored-nation or other "artificial" escalation clauses to be construed as being triggered by a rate increase that this Commission has rejected? This issue[4] is implicit in Superior's contention[5] that its rate increases, with one exception, were not based on the subject West Texas purchase, but on El Paso's purchases from Hunt Oil Company and Shell at increased rates that allegedly were triggered by the subject West Texas purchase. (In fact, Shell's proposed increases were based upon other increased rates of Shell itself that were allegedly triggered by the subject West Texas sale.)

Finally, there is the minor issue presented by the contention of the Hunt interest that inasmuch as they have filed renegotiated rates[6] which are lower than and in place of the favored-nation rates at issue here, the case is moot where they are concerned.

SUMMARY

By an order to show cause dated June 26, 1961, 25 FPC 1219, the issues herein were restricted to the question of whether or not respondents' contracts had been triggered; that is, whether they had the contract support that must exist before their proposed increases may be accepted for filing.

---

[2] In *United Gas Pipe Line* v. *Mobile Gas* (1956), 350 U.S. 332, as modified by *United Gas Pipe Line* v. *Memphis Light, Gas and Water* (1958), 358 U.S. 103, the Supreme Court held that the Commission must reject any filing for a rate increase which is inconsistent with or not authorized by the basic contract between the parties.

[3] Section 154.93 of our Regulations incorporates Commission Orders 232, 232A and 242, which state that most escalation clauses which provide contractual consent to price increase unrelated to the producer's cost of service, are contrary to the public interest and that they will be treated as void with respect to any contracts executed after April 2, 1961. Contracts executed after April 1, 1962, which contain these forbidden types of escalation will be rejected for filing. The only exceptions are provisions changing a price (1) as reimbursement for increased taxes, (2) to a specific amount at a definite date, (3) once in five years consistent with applicable and non-controverted (*i.e.*, not "suspect") producer rates for the area.

[4] This issue was also raised obliquely but not specifically treated by the examiner: See Question No. 7 on page 512 of his decision, where he inquires whether suspended favored-nation increases must be refunded if the increases that triggered them are disallowed.

[5] Superior's Exceptions, pp. 3–4.

[6] With the exception of Superior Oil Company all respondents have renegotiated their contracts with El Paso to provide for increased rates, usually no more than fractionally lower than the favored-nation rates. These renegotiated rates have all been suspended subject to refund. Certain of the Hunt entity renegotiated rates are involved in Docket No. G–9065, recently remanded to the examiner by *Hunt Oil Company*, Opinion No. 365, issued October 17, 1962 (28 FPC 623). Others of the renegotiated rates have been consolidated with the Permian Basin area rate proceeding, AR61–1.

The examiner's decision dealt directly only with this question (issue (1) above)—that is, did the West Texas purchase serve to trigger *any* of these favored-nation clauses? This exact issue has for all practical purposes been previously litigated in the *Pure Oil* case, Opinion No. 341, 25 FPC 383, aff'd (7 Cir. 1962) 299 F. 2d 370. In fact, the increase sought here is based on the same El Paso purchase from West Texas that was held not to trigger similar escalation clauses in the *Pure Oil* case.

Our decision in *Pure Oil*, which we here reaffirm, is adequate authority to dispose of this issue. As is discussed below, the examiner properly held that *Pure Oil* is controlling, and that respondents fail to demonstrate that their gas is comparable to the West Texas gas, or that their favored-nation clauses have been triggered. He therefore concluded that respondents lack the "contractual support" necessary to permit their proposed increases to be filed. We adopt the examiner's decision, subject to the modifications later noted.

In regard to the second issue, we hold that we will not approve a rate increase based upon another rate increase which we have rejected. It would be inconsistent to deny the first increase and yet approve the later increase based upon the first.

Hunt's contention as to mootness is rejected. Since there was a time period between the effective dates of Hunt's favored-nation rates and its renegotiated rates, and since favored-nation rates are proposed for that period, the issue of triggering is not moot.

The procedural and factual background of this case is fully stated in the examiner's decision.

The Pure Oil Case

Pure Oil presents the same issue as that presented here: namely, whether the gas purchased by El Paso from West Texas is sufficiently comparable to respondents' gas to make the price El Paso paid to West Texas "higher" in fact [7] than the price El Paso paid to respondents. In *Pure Oil*, as here, the examiner admitted evidence which demonstrated that the West Texas gas was of such high quality and was available in such large volumes and high pressures, that it was not comparable to respondents' gas.

Pure Oil went on to find that artificial escalations such as favored-nation clauses "are contrary to the public interest." [8] But it did not declare such clauses "void" lest this result in voiding the contracts also; and in thereby making possible unlimited filings of unilateral rate increases, unrestrained by the *Mobile Gas* requirement that rate increases to purchasers with whom contracts exist must have the "contractual support" of the purchaser.

Shortly after this *Pure Oil* decision,[9] the regulations noted above [10] were issued to provide that most artificial escalations would be banned from contracts executed after April 2, 1961.

---

[7] In *Pure Oil*, West Texas received 18¢ as against about 11¢ in the original contracts. Here, the original contract rates range from about 10¢ to about 14¢, and the favored-nation rate filed for is usually 16¢, with a few filings at 18¢.

[8] 25 FPC 383 at p. 388.

[9] The 7th Circuit affirmed the *Pure Oil* decision (1962), 299 F. 2d 370. The court commented that while contract interpretation is not within the Commission expertise, the Commission was correct there in holding that the "other pertinent factors" referred to in the contract clause (quoted at footnote 11 below) were not limited to those factors specified in the contract clause. And the court held that the determination that the West Texas gas has special peaking qualities, so that its price was not higher on a comparative basis, is a matter within Commission expertise.

[10] Note 3, *supra*.

The Contentions of the Parties

The contentions of the parties here are similar in most respects to those raised in *Pure Oil*. Respondents urged that the operative facts in the present case are not similar to those in *Pure Oil*, but they did not list any major differences. They merely stressed that *Pure Oil* is a different case and not controlling here. They argued that these favored-nation clauses are valid and unambiguous,[11] and that extrinsic evidence therefore may not be used to determine whether the price of gas sold under the West Texas contract is higher than the price of gas sold under respondents' contracts. To determine whether gas is comparable to gas sold under an alleged triggering contract, and whether the price of the latter gas is higher, respondents claim that it is sufficient to place the two rate schedules side by side, and to give "due consideration" to the differences specified in each contract. Applying this (their so-called "contract comparison" theory), respondents mentally summed up the contractual differences between their gas and West Texas'; found that they cancelled out, and concluded that their basic contract rates were lower by a few cents than the 18 cent West Texas contract rate. But respondents offered no quantification or specific computations in proof of this. They also argued that by initially "accepting" the increased filings, the Commission was estopped or barred by an unnamed principle comparable to laches from further questioning the justification for their filings.

The staff, supported by certain interveners,[12] rejected respondents' contentions. Staff emphasized that the rate schedules are not merely private contracts, but that they affect and are affected by the public interest and must be interpreted accordingly. Staff stressed that most of respondents' arguments regarding gas comparability were based on a vague use of a group of subjective judgments, and that they were unsupported by specific computation. Staff also argued that the favored-nation clauses here involved are too vague and uncertain for use in the administrative process, and that as parts of private contracts they must yield to consideration of public policy, and therefore should be denied effect under the primary jurisdiction doctrine. In any event, staff concluded, the West Texas gas was so superior to respondents' gas that the former gas was not "higher" in price in fact than respondents' gas, and that respondents' contracts therefore had not been triggered.

---

[11] Pure filed for increased rates under contracts containing these favored-nation clauses, whose language is virtually verbatim with those in this case. The contract clause in the present case reads as follows:

> If, at any time or times after the date of this agreement Buyer shall purchase from any other seller gas from "dry gas" or "gas distillate" wells within one hundred twenty-five (125) miles of the town of Andrews, Andrews County, Texas, at a price per thousand (1,000) cubic feet higher than the price at the time payable hereunder, Buyer agrees that the price payable to Seller for gas delivered hereunder shall be immediately increased to equal such higher price paid to such other seller, and such higher price hereunder shall continue in effect so long as, but only so long as, any such higher price is paid to such other seller. In determining whether the price payable under such other contract or agreement is "higher" than the price payable under this agreement due consideration shall be given to the provisions of this agreement as compared with such other contract or agreement as to quantity and quality of gas, delivery pressures, gathering and compressing arrangements, provisions, regarding measurement of gas, including deviation from Boyle's law, taxes payable on or with respect to such gas, and all other pertinent factors.

[12] Particularly, the State of California, the Southern California companies and El Paso. The full list of interveners is set out in the examiner's decision, *infra.*, p. 511.

The Examiner's Decision

The Examiner [13] held that *Pure Oil* should be followed as a matter of *stare decisis*, noting that the "dominant operative facts and the questions of law applicable thereto [are] substantially identical to . . . the *Pure Oil* case." [14] He held the unusual qualities of the West Texas gas made it not comparable to respondents' gas, that the West Texas price therefore was not "higher", and that triggering did not occur. He also found that the subject favored-nation clauses are contrary to the public interest, because they are "inherently unreasonable, since there is no economic or other substantial justification for the increase" proposed thereby.[15]

Exceptions to the Examiner's Decision

Respondents reiterate their general position that the two gas purchases are comparable; that favored-nation clauses are valid; that rate contracts are personal to the parties and not subject to interpretation in light of public policy, even if ambiguous; that these were unambiguous and not open to interpretation by extrinsic evidence; and that having originally accepted respondents' filings, the Commission was now stopped from scrutinizing the increases proposed.

Staff re-emphasized the vagueness of these favored-nation clauses; and the failure of respondents to quantify their arguments that the two gas purchases are comparable. Staff also urged that favored-nation clauses in general were invalid; and it asserted that the fear that a flood of unilateral filings would result if such clauses are held invalid is largely imaginary.

Conclusions on First Major Issue

The examiner's decision, and the *Pure Oil* opinion upon which it is based fully dispose of this case. Respondents' presentations fail to meet the real questions present here.

(1) They fail to show any significant distinction between this case and *Pure Oil*.

(2) They fail to make a showing, based upon a factual comparison of the relevant gas purchases, that the price El Paso paid to West Texas was "higher" than the prices El Paso paid respondents.

(3) The argument that by "accepting" these filings the Commission later was barred from rejecting them for lack of contractural support has little legal basis.[16]

(4) The claim that favored-nation clauses are valid for all purposes is contrary to the Commission holding in Pure Oil, and to Section 154.93 of the Natural Gas Regulations.[17]

---

[13] The Examiner who presided at the hearings herein (as well as in the *Pure Oil* case) died shortly after their termination. He was replaced, the Commission rejecting a motion to omit the intermediate decision procedure.

[14] Decision, page 520.

[15] Decision, page 521.

[16] The Supreme Court in *Mobile Gas* compelled the Commission to reject, for lack of contractual support, unilateral filings which had been "accepted" in a more complete sense than was true here. Aside from the difficulties of applying estoppel or laches against the Government, the question of contract support goes to the issue of jurisdiction and can be raised at any time. Furthermore, Section 154.101 of the Regulations under the Natural Gas Act provides that acceptance for filing is not necessarily approval.

[17] Both treat them as contrary to the public interest. In both instances the Commission declined to declare them void retroactively only because of a fear that a flood of unilateral filings, which would cause even greater injury to the public interest, would result.

(5) Respondents' claim that rate schedules are merely private contracts that are immune from public policy considerations to the extent that ambiguities in contracts subject to regulation cannot be resolved in favor of regulation in the public interest, has little support in Supreme Court or other decisions.

Triggering of Artificial Escalation Clauses by Disapproved Rates

Although the examiner found that Superior's contract clauses, like those of the other respondents, were not triggered by the El Paso purchase from West Texas—a finding we approve—Superior contends that the legality of its filings is not affected by that finding, because its increases were based on increased rates that El Paso paid to Hunt and Shell. But those increases, all of which were suspended and are subject to refund, were themselves based on the West Texas sale.

We have already found that those increases were not authorized by the contracts between El Paso, Shell, and Hunt. For that reason, we think that Superior was not entitled to collect higher rates under its contracts with El Paso.

Superior's contracts provide that in the event El Paso agrees to purchase gas from another seller at a price higher than the price provided in Superior's contract, "the price . . . payable to [Superior] . . . shall be immediately increased so that it will equal the price payable at the same time *under such other contract*, and such higher price shall continue in effect so long as, *but only so long as*, any such higher price is *payable* for gas by *Buyer under any such other agreement*." [Emphasis supplied.] It seems plain that since El Paso was not obliged to pay higher prices under its contracts with Shell and Hunt—as we found above—Superior could not claim an increased price under its contract. Accordingly, Superior's rate increase must also be rejected. *United Gas Pipe Line Co.* v. *Mobile Gas Service Co.*, 350 U.S. 332 (1956).

Any producer filing for an increase under a favored-nation clause of necessity has two hurdles to overcome in ultimately justifying the rate increase. First, his increase is dependent upon the validity of the rate which triggered his favored-nation clause. If the triggering rate is later found to be invalid or unreasonable in whole or in part, then any rate filing based on such triggering rate is without contractual justification to the extent the triggering rate is reduced. After establishing what rate is valid under the contract clause for the favored-nation increase, it must also be shown that such rate is just and reasonable. In sum, the validity of his filing is at all times subject to the ultimate determination of the validity of the triggering rate as well as the justness and reasonableness of the increased rate.

The Retroactive Amendment of the Hunt Favored-Nation Rates

A final minor issue is posed by the contention of the Hunt interests that since they have filed renegotiated rates lower than, and in place of, the favored-nation rates at issue here, the case is moot where they are concerned. However, while our orders of March 18, 1960 and June 2, 1960 in Docket No. G–18464 permitted the Hunts to substitute their renegotiated rate filings for the proposed favored-nation rates, the Hunt request to make the substitution fully retroactive was refused. Instead the substitutions were made effective only as of June 7, 1960 by our March 18th order and as of March 17 and 18, 1960 by our June 2nd order. This left a period of some months between the original effective dates of the favored-nation rates (October and December 1959) and the dates of the substitute filings. Even though the Hunts have refunded to El Paso the differences between their favored-nation rates and their renegotiated rates, they have not refunded the differences between the favored-nation rates and their originally

effective rates for this period. In any event, the triggering issue presented by this case is not moot for this period during which hunt's favored-nation rates were allegedly effective.

It seems appropriate that we add a word concerning the views expressed in the concurring opinion. It is there suggested that favored-nation clauses in producer contracts should be construed to have contemplated that a higher rate being collected by another producer in the area cannot be a basis for triggering until the higher rate is approved by this Commission. Such a construction of these clauses is inconsistent with their main purpose of placing the producer on a par with other producers selling to the same pipeline. Moreover, the effect of the concurring view would be to foreclose to such a producer the right to file under Section 4 of the Act for contractually authorized rate increases prior to Commission determination of just and reasonable rates for the area, thereby permanently depriving him of any opportunity to recover higher rates for this extended period of time even though such rates should ultimately prove to be just and reasonable.

We believe the use of indefinite escalation clauses of the type here involved is not in the public interest. The Commission has prospectively outlawed such clauses by Section 154.93 of its regulations. It has also encouraged the elimination of such clauses in many older contracts under the Second Amendment to our Policy Statement No. 61–1 and in the provisions of many of our producer settlements. However, to outlaw almost all such clauses retroactively, and by guise of giving the language a meaning exactly opposite to that which was clearly intended, would raise serious questions both of law and fairness.

The Commission further finds:

(1) The initial decision of the presiding examiner issued herein on July 24, 1962, should, except to the extent inconsistent herewith, be adopted by the Commission as its decision in this case, effective as of the date of issuance of this opinion and order. Except to the extent granted herein, exceptions to that decision and all other motions and appeals of all parties should be denied.

(2) Respondents' proposed increased rates as itemized in Appendix A to our Order to Show Cause, and as modified in the case of the Hunt interests by our orders of March 18 and June 2, 1960 in Docket No. G–18464, should be denied and are rejected for filing.

(3) The respondents should be required to refund to El Paso, with interest from the date of payment, all sums collected under and by reason of the proposed increased rate schedules referred to in paragraph (2) of these findings.

The Commission orders:

(A) The initial decision of the presiding examiner issued herein on July 24, 1962, is, except to the extent inconsistent herewith, adopted by the Commission as its decision in this case, effective as of the date of issuance of this opinion and order. Except to the extent granted herein, exceptions to that decision and all other motions and appeals of all parties are denied.

(B) Respondents' proposed increased rates as itemized in Appendix A to our Order to Show Cause, and as modified in the case of the Hunt interests by our orders of March 18 and June 2, 1960, in Docket No. G–18464, should be denied and are rejected for filing.

(C) Respondents shall, within forty-five (45) days from the date of issuance of this opinion and order, refund to El Paso, with interest at the rate of 6 percent per annum, the difference between the amounts collected from El Paso under the Rate Schedules listed in paragraph (B) above, and the rates and charges due and payable by El Paso to respondents under said Rate Schedules prior to the

filing and suspension of the proposed increased rates; and respondents shall bear the cost of such refunds.

(D) Respondents shall, within sixty (60) days of the date of issuance of this opinion and order, report to the Commission in writing and under oath the details of its calculations resulting in refunds ordered pursuant to paragraph (C) above, together with copies of releases from El Paso with respect to such refunds.

(E) Upon satisfactory compliance by respondents with the refund requirements of this opinion and order, the proceeding in this docket shall be terminated.

Commissioner Morgan *concurring*, filed a separate statement.

Commissioner Ross *concurring*, joined in the statement filed by Commissioner Morgan.

MORGAN, *Commissioner, concurring:*

I concur with the limited result reached here.

But this case stands as a lost opportunity. It presented the problem of how to interpret indefinite price escalation clauses, written before producers were made subject to regulation, which permit producers to increase their rates whenever another producer succeeds in establishing a higher rate.

I think it should have been decided on the ground that favored-nation clauses in contracts executed before April 1961 must be interpreted in a manner fairly accommodating the public's interest in reasonable rates as well as the producer's interest in collecting the highest rates permitted under the Act.

Favored-nation rate increases bear no necessary relation to the costs of the gas being sold under the original contract. They were never intended to. The clause is a relic of pre-regulatory days. It was designed and adopted as a general and generous means by which a producer sought to recover his investment, cover himself against any increase in costs, and benefit from any general rise in the price level which might occur over the life of his contract. As a result, favored-nation price levels bear no relation to "just and reasonable" rates.

Yet because the Act to which producers were made subject[1] leaves them free to negotiate their own contract terms; and because it says that companies may collect increased rates if they agree to refund the amount that exceeds the level later determined to be just and reasonable, since 1954 producers have merely filed their favored-nation rate increases with us, and have proceeded to collect rates subject to refund, many of which were and are economically unjustified.

These clauses are plainly contrary to the public interest.[2] Their use in producer contracts executed after April 2, 1961 is prohibited; and those contained in contracts executed before that date would be prohibited also, were it not for the apprehension that this would legally void some of the contracts themselves, and bring on a rash of contract replacement filings at high rates. But as we all know, producers were made subject to regulation because the operation of just such devices drove the price of gas to unjustified levels. In any event, we now must decide, in the public interest, how those clauses should be interpreted under the Act and under proper regulatory standards.

As applied (partially) after 1954, the Act had an immediate effect on those clauses entirely unforeseen when they were written. Now, when a favored-nation clause is triggered by a suspended rate being collected subject to refund,[3]

---

[1] *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672 (1954).

[2] The Commission on three separate occasions has declared them to be ". . . undesirable, unnecessary, and incompatible with the public interest." It found that limited, five-year price redetermination clauses are enough to enable producers to adjust to changing economic conditions. See Order No. 232, issued March 3, 1961, 25 FPC 379; Opinion No. 341 in *Pure Oil*, issued March 3, 1961, 25 FPC 383, Order No. 232A, issued March 31, 1961, 25 FPC 609; and Regulations Sect. 154.93.

[3] Whatever the reason for its filing, a rate increase filed with us that exceeds the interim level indicated in our Policy Statement No. 61–1 is suspended. 24 FPC 820.

the producer whose rate is triggered collects his increase subject to possible reduction to the just and reasonable level of the triggering rate, when the latter is determined,[4] and to possible refund of any excess with interest.

This is illustrated by four[5] of the five Superior filings considered in this case. Here because of the 18¢ rate at which West Texas sold to El Paso allegedly was higher in fact that the rates at which Shell and Hunt sold to El Paso,[6] Shell and Hunt raised their rates to 16¢ and 18¢. Then—even though these increases were suspended for the statutory period and thereafter were collected subject to refund—Superior increased its rates to El Paso[7] to 16¢ and 18¢ because Shell and Hunt had done so! The result was that for almost the next two years, and *for no economically justifiable reason whatsoever*, Superior collected from 25 to 50% more for gas under those four schedules than under its prior rates. Yet Superior now must refund the entire increase, with interest, because the alleged triggering never really occurred.

Superior, however,—by persisting that its filings were ". . . justified by the Favored Nation clauses of its respective rate schedules,"[8]—raises the basic issue of whether escalation clauses can or should be construed to contemplate triggering by *any and all* price increases including those which are suspended and are being collected subject to refund.

The wording of most of these pre-regulatory clauses gives no indication whether it was the intention of the parties that the clauses would be triggered by suspended or unapproved rates which were, themselves, subject to subsequent reduction and refund.[9] So the question is, now that these clauses *have* been made subject to regulation, should they be construed under ordinary rules of contract interpretation as being triggered by higher unapproved rates that may include (refundable) excesses which it is finally determined the producer never had a right to collect; or should they be construed, where appropriate, as being triggered only by higher, finally-approved rates?

I believe that the latter is the proper interpretation. The rule for deciding this question is that all contracts, even the most private and personal, must be interpreted in the light of public policy.[10] Where the contract has been made subject to public regulation and is filed as a jurisdictional rate schedule having the force of law, the operation of its provisions is necessarily limited or confined by the provisions and purpose of public law and by considerations of public policy. Although a gas price contract is a matter for private agreement, *insofar as that contract operates as a public rate schedule*, we must resolve any doubts we may have as to the intent of that contract in a manner that accommodates, or at least does not supersede, the purpose and intent of the regulatory law, which is that the price of gas shall be limited" . . . to the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest."[11]

When the clause is construed as being triggered by higher, unapproved rates, there is an egregious impact on consumers. The inescapable consequence is that each higher, unapproved rate triggers an everspreading round of

---

[4] Then the triggered producer also has to show whether the triggering rate, as reduced, is reasonable for him.

[5] Superior's FPC Rate Schedules Nos. 9, 30, 10, and 8.

[6] 10¢ and 14¢; raised to 16¢ and 18¢ in September and October 1959.

[7] 10¢ and 12¢; raised to 16¢ and 18¢ in April 1960.

[8] Superior's Exceptions, p. 19.

[9] If the clause expressly provides that it shall be triggered by higher suspended or unapproved rates, I would be constrained to so interpret it.

[10] See 3 Corbin on Contracts, 1960, Sec. 560 at pages 194–6; and 4 Williston on Contracts, 3d Ed., 1957, Sec. 626 at page 851 *et seq.*

[11] *Atlantic Refining Co.* v. *Public Service Commission*, 360 U.S. 378 at 388 (1959).

economically unjustified rate increases. As one producer escalation elevates another, we are inevitably confronted by an ever-rising price level;[12] an ever-increasing need for consumers to pay higher rates "subject to refund"; an ever-increasing backlog of administrative proceedings; and an ever-increasing contingent liability against the financial stability and solvency of producers. After lengthy delays, produced partly by an inflated backlog of such cases, the Commission determines what the proper rate level should have been; and refunds are made.[13]

But the damage is done: the price level was and remains raised. Of course, the refund requirement, as we have repeatedly explained to the courts and to Congress, is an ineffective means[14] of protecting the public against and compensating it for paying economically unjustified charges.[15] And the additional effects of this process upon contracts written during the period of escalation and suspension are not removed by the eventual refunds and reductions.

If this inflationary pricing practice occurred in any other sector of the economy, it would be met with vigorous "roll-back" movements.[16] Yet here it is considered acceptable because it takes place within the protective confines of a regulatory statute enacted to prevent inflationary practices and to protect the consumer from unjust rates! This, I submit, institutionalizes inflation through regulation. This is the interpretation that has been followed in the past; and this is the interpretation the majority perpetuates here.

I am convinced that this interpretation is improper. The increased-rate collection provisions of Section 4(e) should not be exploited in this manner; and it was never intended that they should be. They were placed in the Act because Congress felt that "companies should not be precluded by law from increasing the prices of their product *whenever that is the economically necessary means of keeping the intake and outgo of their revenues in proper balance . . .*" [emphasis supplied].[17] Yet the Commission's interpretation of these clauses treats those provisions as nothing more than a mechanism for the collection of economically unjustified rates based on the favored-nation clause—a clause repeatedly found "contrary to the public interest." This debases the statute.

---

[12] In *Pure Oil* the increases claimed by Pure amounted to only $98,000 a year; but their cumulative effect would have been at least $18,000,000 a year! 25 FPC 383 at 389.

[13] More often than not—and in order to keep its contingent refund liability from becoming too swollen as one escalation is "pancaked" atop another—the company itself offers to settle and voluntarily to refund some stated proportion of the "excess" agreeable to the company and its customers.

[14] *See FPC* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145, 31 U.S. L. Week 4029 (December 3, 1962); *United Gas Pipe Line Co.* v. *Memphis Light, Gas & Water*, 358 U.S. 103 at 119 (1958).

[15] The majority's answer to the problem (of how to prevent these clauses from lifting prices above the just and reasonable level required by the Act and holding them there for extended periods) is signally unsatisfying. They stress that after an economically unjustified rate goes into effect, and while it is being collected subject to refund, the producer will be required to show (1) that his rate actually was triggered, and if it was, then (2) he has to go through another proceeding to show that his triggered rate is just and reasonable.

True as all this may be, it utterly ignores the position in which the consumer is placed, the period for which he is held there, and the fate which befalls him while he is being held. This case itself shows how ineffectual that answer is. Here (1) it finally was found that the filings were never authorized. So the whole thing falls, and refunds eventually will be made—two years, at least, after collections started! And if the gas had been found "comparable," then (2) at some time in the future course of human events, we would have undertaken an additional proceeding to determine whether the favored-nation price level was just and reasonable. And in the meantime the companies would have gone on collecting the unjustified rate!

[16] See Economic Report of the President for 1962, page 87.

[17] *United Gas Pipe Line Co.* v. *Memphis Light, Gas & Water, supra*, at 113.

Inasmuch as the sole purpose of making producers subject to the Act was to prevent the price of gas from exceeding just and reasonable economic levels,[18] I believe that the purpose and public policy of the Act compels us, whenever possible, to construe favored-nation clauses as not triggered by higher rates unless and until those higher rates have been found economically justified.

It is true that we may permit a higher rate found economically justified to trigger these clauses; and it is true that we may permit a producer to collect, under a favored-nation clause so triggered, a higher rate subject to refund even though that rate has not been found economically justified for him (and even though there is little reason to believe that it will be). This is permitted to the extent that the Act preserves "the 'integrity' of private contractural arrangements for the supply of natural gas, (subject of course to any overriding authority of the Commission) . . ."[19] However, as the purpose of the Act is to insure that rates for natural gas "shall be just and reasonable," it is also true that a rate should not be permitted to trigger a widespread price increase unless it has first been found to be just and reasonable or compatible with the public interest.[20]

I therefore believe we should have here ruled that rate increases (in excess of our interim ceilings), which are based upon indefinite price escalation clauses such as those before us, may not take effect unless the (triggering) rates on which they are based have been found just and reasonable or in the public interest.

Adoption of such a policy would mean that the level and amount of favored-nation rates (in excess of our generous interim ceilings) hereafter collected subject to refund would be lower; and the moment when they become collectible would be deferred longer than presently is the case. Another advantage, conferred upon producers and consumers alike, would be to permit this Commission to concentrate its attention upon, and to treat with greater administrative fairness, those major cases which clearly pose the threat of triggering.[21] I further believe that under such a policy, producers whose rates are triggered by a rate thus found to be economically justified should be allowed to collect their increases after a one-day suspension period.[22]

Inasmuch as the Act was applied to producers in order to protect the public from unjust and unreasonable prices, I believe that if one interest here must defer to or be made compatible with the other, it is the producer's interest in collecting economically unjustified prices that must defer to the public's interest in just and reasonable rates.

In sum, I believe that these favored-nation clauses should be construed as being triggered by higher rates only if those higher rates have been found just and reasonable or compatible with the public interest; I believe that this interpretation should have been adopted at the outset of producer regulation; I believe we should adopt it now; and I believe that until we do adopt it, our efforts to

[18] *Phillips Petroleum, supra,* at page 685.

[19] *United Gas Pipe Line Co.* v. *Memphis, supra,* at page 114. The language quoted was not addressed to "private contractual arrangements" found "undesirable, unnecessary, and incompatible with the public interest." Footnote 2, *supra.*

[20] *Cf. United Gas Improvement Co.* v. *FPC* (9 Cir., 1960), 283 F. 2d 817 at 824–5; *cert. den'd,* 365 U.S. 881 (1961).

[21] See, for example Opinion No. 369 (and dissent) in *H. L. Hunt, et al.,* issued November 30, 1962, 28 FPC 897, granting staff's motion to dismiss producers' rate increases, which would have led ". . . to the triggering of almost a million dollars a year in rate increases," on the ground that those producers had failed to meet their burden of proof under Sec. 4(e).

[22] Rates so triggered would still be subject to independent economic justification later.

restrict the price of gas "to the lowest possible reasonable rate" will remain suspect in the eyes of the consumer.[23]

The majority claim that the effect of the interpretation advanced here would prevent producers from collecting rate increases for an "extended period of time"—that is, until just and reasonable rates for the various pricing areas are determined. This misinterprets my position, for I have made it clear that important, above-ceiling rate increases involving triggering should be handled promptly and, if necessary, individually; and that favored-nation clauses may be activated after (but not until) the just and reasonable level of those triggering rates is determined. This does not "permanently deprive" a producer of his favored-nation rights. It merely holds that they must be *determined* as promptly as possible, and then *exercised* in a manner consistent with the public interest.[24] Specifically, because the purpose of the Act is to prevent the price of gas from going above economically justified levels, my interpretation merely holds that such clauses cannot be activated by rates that have not been economically justified. This is not the deprivation of a right; it is the regulation of a right in the public interest.[25]

But I am more disturbed by the majority's implication that hereafter, as in the recent *Slade* case,[26] the Commission will permit producers to collect their rate increases subject to refund, pending the far-off day when just and reasonable rates are determined in area proceedings. Most of those proceedings have not even been initiated! Regardless of the method that may be followed once area rates are established, that day is so distant that we cannot refuse to determine such a question in the interim. The Act at Section 4 (e) says this Commission must give rate increase questions "preference over other questions pending before it and decide the same as speedily as possible." And the reason for this, as we ourselves have said, is because "experience has shown that refunds do not afford full protection to consumers who ultimately pay the excessive charges."[27] Accordingly, to the extent that the aforementioned implication is responsible for the result reached by the majority, I must respectfully express my total disagreement.

Commissioner Ross joins me in this concurring statement.

INITIAL DECISION

FINDING THAT THE SALE OF NATURAL GAS TO EL PASO BY WEST TEXAS GATHERING COMPANY DOES NOT JUSTIFY PROPOSED INCREASED RATES AND CHARGES TENDERED FOR FILING BY THE RESPONDENTS, DISMISSING APPLICATIONS FOR SAID PROPOSED INCREASED RATES AND CHARGES, AND REQUIRING REFUNDS

(Issued July 24, 1962)

LANDE, *Presiding Examiner:* This proceeding is concerned with a special type of contract provision, frequently referred to in the industry as a favored-nation

[23] *Atlantic Refining Co.* v. *Public Service Commission, supra.*

[24] "It is hereby declared that the business of . . . selling natural gas for ultimate distribution to the public is affected with a public interest, and that Federal regulation thereof . . . is necessary in the public interest." Natural Gas Act, Section 1.

[25] This interpretation is also consistent with the Fifth Circuit's recent ruling in the *Hunt* case—i.e., that we may not use our certificating power to deny producers their right to file for a rate increase. And I cannot reconcile the majority's position here with the assertions in the Commission's petition for rehearing in the *Hunt* case—i.e., that we can deprive producers of that right. (See Respondent's petition for rehearing en banc, dated August 1962, in *H. L. Hunt, et al., v. Federal Power Commission,* Fifth Circuit, Nos. 19065, etc., July 19, 1962, 306 F. 2d 334.) [Fifth Circuit reversed, 376 U.S. 515 (1964)].

[26] Opinion No. 376 in *Slade, Inc.,* Docket No. G–19986, et al., issued January 3, 1963, 29 FPC 11; Reconsideration Denied (two Commissioners dissenting), February 27, 1963, 29 FPC 408.

[27] Our brief to the Supreme Court in *FPC* v. *Tennessee Gas Transmission Company,* footnote 14, *supra.*

clause. When a pipeline company and a producer have a favored-nation clause in their gas sale contract, the pipeline company becomes obligated to pay to the producer the equivalent of any higher price which the pipeline company may subsequently pay another producer for comparable gas within a certain geographical area. The new purchase is the act which "triggers" the clause.

The 15 Respondents named herein (Respondents) support their proposed rate increases, directly or indirectly, upon such a favored-nation contract clause allegedly "triggered" by the sale of West Texas Gathering Company (West Texas) to El Paso Natural Gas Company (El Paso). Within about a year each Respondent tendered for filing proposed changes in rates and charges which were suspended by orders of the Commission, and upon motions duly filed under Section 4(e) of the Natural Gas Act, their rates were made effective subject to refund with respect to their FPC Gas Rate Schedules identified in the Appendix hereto and on the dates indicated therein.

Certain of the increased rates and charges proposed by the Respondents were embraced in other proceedings pending before this Commission at the time the Show Cause order was issued. Respondents cited this fact and other considerations in their various motions objecting to a hearing of their cases in the instant proceeding. Noteworthy among said motions are: Motions to dismiss filed by Shell Oil Company (Shell) on July 11, 1960, by Hunt Oil Company, N. B. Hunt, Lamar Hunt, W. H. Hunt, H. L. Hunt, Lyda Hunt-Margaret Trusts, Lyda Hunt-Caroline Trusts, Lyda Hunt-Herbert Trusts, Lyda Hunt-Bunker Trusts, Lyda Hunt-Lamar Trusts (Hunt Entities) on July 12, 1961, and by Sun Oil Company (Sun) on July 19, 1961; and Motions of the Superior Oil Company (Superior) filed on July 19, 1961, pleading that it be permitted to present its case without reference to the Pure Oil record in Docket No. G–17930 and, among other things, that Docket No. G–20075 not be consolidated for hearing. The foregoing motions were denied by the Commission by orders issued herein on July 21, 1961, 26 FPC 185 and September 15, 1961.

By order issued July 21, 1961, El Paso, Pacific Gas and Electric Company, Amerada Petroleum Corporation, Southern California Gas Company, Southern Counties Gas Company of California, and San Diego Gas Electric Company were permitted to intervene. The Public Utilities Commission of the State of California filed a notice of intervention on July 11, 1961. By order, issued August 4, 1961, the Hunt Entities, A. G. Hill, Lyda Hill Trust Estate, Albert Hill Trust and The New Seven Falls Company were also permitted to intervene.

The record in the instant proceeding reports the testimony of 11 witnesses presented by Respondents, El Paso, and the Staff and comprises 1962 pages of transcript, 43 exhibits and 50 items incorporated by reference. The hearing began July 24, 1961, and subsequent to recesses was concluded on November 20, 1961, after 13 trial days. The initial briefs of Respondents were filed on March 1, 1962; reply briefs on March 29th, and the final briefs of Respondents on April 19, 1962.

On January 10, 1962, following the death of Presiding Examiner Glen R. Law, the El Paso Natural Gas Company filed a motion moving that the intermediate decision procedure be omitted in this case pursuant to paragraph 1.30(c) of the Commission's Rules of Practice and Procedure and that the five-day filing requirement set forth in subpart (3) of said paragraph 1.30(c) be waived, that the Commission cause the record herein to be certified, that final decision of this matter be rendered by the Commission, and for such other relief as may be just and equitable.

This motion was opposed by Superior on January 16, 1962, by Hunt Entities on January 18, 1962, and by Sun on January 19, 1962, and on February 7, the

Commission issued an order denying the motion to omit the intermediate decision procedure. By a supplemental designation of Presiding Examiner dated May 21, 1962, Allen C. Lande was designated herein to succeed the late Glen R. Law, with power and authority to do and perform all of the duties and responsibilities of the Presiding Examiner yet remaining to be done including the preparation, service and filing of the initial decision and the certification of the record herein.

Questions Presented

The various parties to this proceeding worded the issues herein differently, depending on their respective positions. Pertinent questions presented are:

1. Did the purchase of natural gas by El Paso from West Texas constitute the condition precedent which would cause the favored-nation clauses to become legal justification for the tender and unconditional acceptance for filing of the subject rate increases.

2. Can the Respondents' favored-nation provisions be triggered on an unknown future rate such as the interim rate of 18 cents per Mcf, which is revisable under the terms of the contract.

3. Whether the favored-nation clauses in the Respondents' contracts are ambiguous.

4. Whether alleged activation of the favored-nation clauses in the Respondents' gas well contracts is supported by the record.

5. Whether the favored-nation clauses in residue gas and casinghead gas contracts are activated by a contract relating to gas-well gas.

6. Whether the favored-nation clauses of casinghead gas and residue gas contracts can be activated by higher prices paid to the same producer.

7. Whether favored-nation increases collected subject to final disposition must be refunded if the higher prices upon which they are based are disallowed.

8. Whether the favored-nation clauses were intended to be activated by purchases from a gas gathering company.

9. If not, does the Commission have power to grant relief in this or any other favored-nation clause proceeding.

10. Why, in view of the record in the recently finalized *Pure Oil* case, the Commission should not find that no triggering had occurred and why Respondents should not be ordered to make refunds.

11. If so, what is the exact nature and extent of that relief and, in this connection, what is the effect of various "validating" filings made by the Respondents.

12. Should the filings identified in the Appendix hereof be severed from other proceedings.

Positions of Respondents

Although the positions adopted by the Respondents are by no means identical in all respects, common views are held at least with respect to certain issues. All denied the applicability to the facts in this proceeding of the Commission's decision in the *Pure Oil* case, Docket No. G–17930, 25 FPC 383. On the fundamental favored-nation clause activation issue presented by this case, all contend that their respective clauses were validly and legally activated. They further agree that determination of this question depends solely upon a comparison of contract provisions, and that since these clauses are presumed in no way ambiguous, extrinsic evidence cannot properly be received to aid in construing them. They uniformly insist that factors extrinsic to the contracts cannot be considered in determining whether or not the price paid by El Paso, which allegedly activated their particular favored-nation clauses, was in fact higher than the price which El Paso was paying them.

Shell contends that as for those favored-nation filings made by it under casinghead and residue gas contracts based upon the price paid by El Paso to West Texas for gas-well gas, the favored-nation clauses refer simply to "gas," and that therefore such residue and casinghead contracts can be triggered by a purchase of gas-well gas. Shell also in three instances made favored-nation filings based upon "higher" rates being paid to it by El Paso under other Shell rate schedules. As for those favored-nation filings made upon the basis of "higher" rates being collected subject to refund by other Respondents herein, which "higher" rates were themselves the product of a favored-nation increase based upon El Paso's purchases from West Texas, Sun and Superior contend that the reason why these "higher" rates were paid is immaterial to the validity of their filings based upon them. Sun further insists that if these "higher" rates were subsequently disallowed by the Commission and refunds thereof ordered, Sun would not be required to make similar refunds.

Position of El Paso

El Paso's position in this proceeding is diametrically opposed to the Respondents' positions. El Paso contends that the favored-nation clauses are ambiguous; that resort to extrinsic evidence must be had to properly construe them; that the extrinsic evidence clearly establishes that the Respondents' favored-nation clauses were not triggered; that residue and casinghead gas contracts cannot be activated by a contract relating to gas-well gas; that a producer such as Shell cannot validly file for a favored-nation increase based upon rates for other gas being paid to it; that favored-nation clauses were not intended to apply to pipeline companies such as West Texas; and that all of these favored-nation filings, whether based directly or indirectly upon the El Paso-West Texas transaction, must be disallowed and refunds of the amounts collected thereunder ordered.

Position of the Southern California Companies

The Southern California Companies take the position that none of the subject rate increases are contractually authorized; that all of the increases should therefore be dismissed or denied; that none of the "validating" filings made by the Respondents are effective to change the foregoing result; that the Commission possesses ample power to give complete relief in this proceeding; that nothing which has occurred or failed to occur in the past bars the Commission from exercising that power.

Position of the State of California

Respondents have failed to carry the burden placed upon them by the order to show cause in this proceeding. As in the *Pure Oil* case, the evidence shows that their favored-nation clauses are triggered only if El Paso pays a higher price to another producer. West Texas is not a producer. But beyond that, as in the *Pure Oil* case, the evidence proves that the West Texas price is not higher than Respondents' prices, and that there was no triggering under their contracts. The situation here being indistinquishable from the situation of the producers in the *Pure Oil* case, the Commission must, in ruling upon the order to show cause, decided the issue against the Respondents in all matters and particulars. Even independently of the *Pure Oil* decision. Respondents have not shown that their favored-nation clauses have been triggered, either directly or indirectly.

Most important, there never existed any lawful basis for Respondents' filings. The favored-nation clauses which support the filings are derogatory of the public interest and void in this regulatory setting.

Position of Other Interveners

Amerada Petroleum Corporation's (Amerada) position corresponds with that of Respondents. Interveners, A. G. Hill, Lyda Hill Trust Estate, Albert Hill Trust and The New Seven Falls Company have a community of interest with the Hunt Entities and appear to take a position corresponding with that of the Respondents outlined above, except for certain minor modifications.

Position of Staff Counsel

The West Texas gas has unique quantity, quality and delivery pressure features, which make it more valuable than the gas supplied by any one of the Respondents; therefore, West Texas' price is not "higher" than the underlying rates of Respondents and no triggering has occurred. Respondents cannot properly compute comparative values of "higher" prices of gas by using the terms of their own contracts. Respondents failed to prove that the West Texas contract rate triggered their favored-nation provisions. The Commission has already determined that West Texas is not a dummy corporation under the control of El Paso; therefore, Respondents cannot use the price paid by West Texas to its suppliers as the price triggering its favored-nation provisions.

Respondents' own testimony demonstrates that their favored-nation contract clauses are too vague and indefinite. The Commission should not go beyond making an inspection of the uncertainty of the terms for the purpose of determining whether they are fit for rate making. The power of primary jurisdiction reposed in regulatory bodies buttresses the principle that private parties cannot cause enforcement through the Commission of privately made contracts so as to diminish the Commission's jurisdiction.

Respondents' filings should be dismissed and appropriate refunds ordered.

The Contested Contract Clauses

Each of the 15 Respondents in this proceeding is an independent producer of natural gas subject to regulation by the Federal Power Commission pursuant to the provisions of the Natural Gas Act, 15 U.S.C. § 717 *et seq.* Each produces natural gas in the Permian Basin of west Texas and southeast New Mexico, and each sells gas thus produced to El Paso under one or more contracts duly filed as rate schedules with the Federal Power Commission.

Each of the Respondents' contracts in this case contains a so-called favored-nation clause. All of such clauses are of the same type in that all are two-party favored-nation clauses which provide in essence that in the event El Paso pays any other producer within a designated area a price higher than it is paying to the particular producer, it will increase the price to the latter to the same amount. This assumes that the price being paid to such other producer is being paid for gas of like or similar quality and that all other pertinent factors encompassed in purchasing of gas from such other producer are substantially similar to the same factors being utilized with respect to the producer party to the contract.

Favored-nation clauses were first used extensively by El Paso in late 1947. El Paso had more than 750 favored-nation contracts with producers in the Permian Basin of western Texas and New Mexico when it filed a complaint and petition for issuance of declaratory order in *El Paso* v. *Amerada Petroleum Corporation, et al.*, Docket No. G–18900, July 6, 1959. El Paso's petition requested a judgment by the Commission to the effect that, among other things, the spiral escalatory provisions contravene public policy, that the purchase by El Paso from West Texas does not constitute a "purchase" of gas within the

meaning of the favored-nation provisions and that filings on the basis of indefinite escalation clauses, including favored-nation clauses, be rejected by the Commission. This proceeding had not been set for hearing when El Paso renegotiated its contracts with over 400 producers so as to eliminate the favored-nation clauses in consideration of agreements for limited increased prices.

On various dates in 1959, each of the Respondents herein filed with the Federal Power Commission a notice of change in rates under its respective rate schedule or schedules increasing the price of gas produced by it in the Permian Basin and sold to El Paso. In each instance the filing was made pursuant to the claimed activation of the favored-nation clause in the particular contract between the Respondent and El Paso. Each Respondent alleged that favored-nation clause activation occurred as a result of the purchase of gas-well gas by El Paso from West Texas pursuant to a contract dated January 1, 1958, and filed with the Commission as West Texas Gathering Company's FPC Gas Rate Schedule No. 1. El Paso protested each of these filings as having been made unilaterally and without contractual assent. All were suspended by the Commission, and thereafter the increased rates thus proposed were permitted to be collected subject to refund. Pertinent data concerning these filings are set forth in the Appendix attached hereto.

In addition to the above, certain of the Respondents at other times in 1959 and 1960 filed notices of change in rates under other rate schedules also involving sales to El Paso of gas produced in the Permian Basin. Again each filing was made pursuant to the claimed activation of the favored-nation clause in the particular contract between the Respondent and El Paso, but in these instances the alleged activation occurred as a result of a "higher" price being paid by El Paso to the same or to another Respondent, which "higher" price was in turn the result of a favored-nation increase based upon El Paso's purchase from West Texas and being collected subject to refund. Again El Paso protested these filings, and again, they were suspended by the Commission and thereafter the rates proposed were permitted to be collected subject to refund. Pertinent data concerning these filings are set forth in the attached Appendix.

With the exception of Superior, all of the Respondents in this proceeding have subsequently renegotiated their Permian Basin gas purchase contracts with El Paso. By this renegotiation the favored-nation clauses were deleted from the Respondents' contracts, the terms of the agreements were extended, new acreage was dedicated in some instances and prices higher than the prior contract prices, but generally lower than the favored-nation rates at issue in this proceeding, were agreed upon. The new rates negotiated with Claude E. Aikman and Shell Oil Company were finalized by agreements dated October 26, 1959, to become effective as of January 1, 1960. A similar effective date was provided in the amendatory agreements entered into with Sun Oil Company. The Hunt Entities, however, filed the amendatory agreements which they entered into with El Paso as substitutes for their previous favored-nation filings, and made refunds to El Paso of the difference between the higher favored-nation rates and the renegotiated rates.

On June 26, 1961, 25 FPC 219 the Commission ordered Respondents to show cause why their proposed favored-nation rate increases to El Paso Natural Gas Company should not be denied and refunds made. Respondents have 35 favored-nation contracts pending, all involving sales to El Paso from gas fields in the Permian Basin area. The resulting increases to the purchaser total more than 1.8 million dollars annually. It is estimated that such rates collected subject to refund and in issue in this proceeding would total about two million dollars.

The Pure Oil Case

The favored-nation clauses in issue are similar to those contained in the contracts between Pure Oil and others and El Paso, the increases in which were denied by the Commission on March 3, 1961, 25 FPC 383. The Commission denied the Pure Oil increases on the ground that they had not been triggered by El Paso's purchase of gas from West Texas at a higher price. The increase proposed by the 15 Respondents herein are based on the same "triggering" action as Pure Oil's. The Commission's order in effect directs the Respondents to show cause why their filings should not be treated the same as those in the *Pure Oil* case.

The facts developed in the instant proceeding are very similar to those determined by the Commission and the Court of Appeals in the *Pure Oil* case. It will be helpful to highlight some of the pertinent features of the *Pure Oil* case.

On January 30, 1959, Pure Oil tendered for filing three proposed increases in rates and charges upon the basis of alleged activation of favored-nation clauses by reason of the same sales by West Texas to El Paso. Pure Oil's proposed increased rates were suspended and made subject to a public hearing. Pure Oil claimed in substance that West Texas is a dummy corporation under the control of El Paso and indistinguishable from it except for the corporate veil. Pure Oil thus alleged triggering of the gas on an individual supplier to West Texas. The Commission issued subpoenas *duces tecum* upon El Paso and West Texas officials for relevant documents and ordered depositions taken. This ancillary proceeding became part of the record in the *Pure Oil* case and the Commission held that there was no foundation for the contention that West Texas was El Paso's dummy subsidiary. After lengthy hearings, exchange of briefs and oral argument the Examiner who presided in that proceeding ordered the rejection of the increased rate filings. He concluded that the clauses could be triggered only by El Paso's purchases from other producers and not by a purchase from a nonproducer, West Texas. Secondly, he concluded that the usefulness of the West Texas gas for peaking purposes was a "pertinent factor" within the meaning of the comparability provision of the favored-nation clauses and that, giving due consideration to this unusual property, the West Texas price was not higher than Pure Oil's price. The Commission specifically agreed with the second of the Hearing Examiner's findings. The Commission held, among other things, that the favored-nation clauses in Pure Oil's above-identified rate schedules and contracts had not been activated. Pure Oil obtained court review of the Commission's decision. On February 26, 1962, the Court of Appeals affirmed the Commission, 299 F. 2d 370. Pure Oil's proposed increased rates and charges tendered upon the basis of its favored-nation provisions had become effective subject to refund of August 2, 1959.

Consistent with its findings in the *Pure Oil* case, the Commission amended its regulations to prohibit, effective April 3, 1961, the use of indefinite escalation provisions in new producer contracts (Order Nos. 232 and 232A, 25 FPC 609). On April 25, 1962, the U.S. Court of Appeals for the Fifth Circuit denied Sun's petition to review said order, 304 F. 2d 293 [Companion case at 304 F. 2d 290.]. A petition for *certiorari* is pending. [Denied, 371 U.S. 861.]

The Testimony

The Respondents stated in general that the price El Paso is paying West Texas is "higher" than the Respondents' pre-escalation rates by the number of cents per Mcf of increase in rates they have filed for in the instant proceedings;

that the correct method for determination whether the West Texas price is "higher" calls for side-by-side comparisons of the West Texas rate schedule with each of Respondents' rate schedules; that this process does not require arithmetic comparisons but that the equating of "contract provisions" by the judgment of company witnesses should, and does, show a precise difference in cents per Mcf between the Respondents' underlying rates and the 18.0 cent interim rate for sales by West Texas to El Paso. They presented testimony on the general theory of rate schedule construction, which they call "contract comparison." The witnesses said that they placed the West Texas rate schedule and a rate schedule of a Respondent side by side, examined the provisions of each, did a mental summing-up of the plusses and minuses attributable to the differences in named "factors," treated these with "due consideration" and arrived at their decisions that the Respondents' rate schedule had been triggered by the sale of the West Texas gas. With regard to the phrase "all other pertinent factors" the company witnesses said that this applied only to "factors" and things named in the rate schedules, but not to data concerning deliverability and similar knowledge which could be learned only from testimony. Respondents' witnesses conceded that differences exist in values of "factors" in their various rate schedules as compared with West Texas' Rate Schedule No. 1, but contended that in some instances these differences favored the Respondents and in other instances favored El Paso; that all such variations tended to cancel out to zero; that this left a clear justification for their filings as demonstrated by the difference between the 18.0 cent price tag for West Texas gas and the approximate 10.5 cent price tag for Respondents' allegedly equivalent gas at the underlying rates.

El Paso presented five witnesses, who testified that casinghead and residue gas are inferior from an operational standpoint because El Paso cannot "swing" such gas, use it for peak covering purposes, nor utilize the sources as storage. Almost all of the gas purchased from West Texas comes from the Emperor Field which gives it a high value for El Paso's operations because the gas is equivalent to sizable storage with the required high deliverability; the contract with West Texas allows El Paso to purchase large volumes of gas on a day-to-day basis, and also gives it a large amount of system peak covering capacity, e.g., during the year 1959, El Paso's low day was approximately 43 million cubic feet and its peak day was approximately 325 million cubic feet from West Texas; the location of the gas from the Emperor Field can offset deficiencies which may occur from practically any source of supply in the Permian Basin; and El Paso has acquired the equivalent of storage in exactly the optimum point on its system.

The Staff presented one witness who summarized the details of Respondents' favored-nation clauses and compared the contract provisions in Respondents' rate schedules with those in the alleged triggering rate schedules in respect of the "factors" named in the favored-nation clauses. The Staff also introduced data showing the gross sales of gas under Respondents' rate schedules involved herein as compared with those under the West Texas rate schedule. Because the Commission's Show Cause order made the *Pure Oil* record and Opinion No. 341 the reference of said order, the Staff witness summarized the details of Pure Oil's favored-nation clauses. The Staff's case also compared the contract provisions in Pure Oil's rate schedules with those in West Texas' rate schedule with respect to the "factors" named in the favored-nation clauses.

Regulatory Considerations

Respondents' favored-nation clauses contain features of concern to the public interest. The sellers' prices are subject to triggering should El Paso pay any of

the producers a higher price. The contract does not require economic justification for the increase. The rate does not necessarily have to be "fair and reasonable" under the recognized standards. Under Respondents' interpretation, increases whether excessive or not would be permitted to take effect, and the eventual rate adjustments would be delayed.

The record clearly demonstrates that favored-nation clause issues are complex and give rise to a multitude of controversial contractual provisions. This in turn places on the Staff of the Commission an undue administrative burden. Respondents contend that in face of rising trends in costs, an unchanged gas price would result in substantial liquidation. This contention was dealt with by the Commission in the *Pure Oil* case where it stated that:

> Assuming that indefinite escalation clauses in producer contracts had some justification years ago, when a lack of purchaser outlets and lack of consumer demand forced prices to abnormally low levels, this justification no longer exists today, when purchasers of gas are numerous, consumer demand is strong, and buyers are competing eagerly for available supplies of gas. In our judgment, in the light of continuing increases in the price of gas in recent years and the present high level of prices, escalation clauses such as Pure's have by now outlived whatever economic function they may have had. [25 FPC 383 at page 391]

The favored-nation clauses in Respondents' contracts are no longer consistent with the public interest, and therefore they must not be encouraged in a regulatory setting.

The enforcement of producer-pipeline contracts as embodied in filed rate schedules is not a right personal to the parties. Under the Natural Gas Act the consuming public is entitled to protection. The Supreme Court has consistently held that it is the purpose of the Natural Gas Act "to protect consumers against exploitation at the hands of natural gas companies." *F.P.C.* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1 (1961); *F.P.C.* v. *Hope Natural Gas Co.*, 320 U.S. 591, 610 (1944). Respondents contend that the Natural Gas Act precludes the Commission from seeking to modify practices that would be permissable under general principles of contract law. This is contrary to the Commission's clear power to find existing contracts affecting rates to be unjust or unreasonable. Section 5(a), 15 U.S.C. 717d(a). Clearly, if a gas sales contract involved in an application for a certificate of convenience and necessity includes provisions against public policy, the Commission would not be compelled to grant such a certificate. It may condition the certificate upon removal of provisions contrary to public policy. *Texaco, Inc.* v. *F.P.C.*, 290 F. 2d 149 (CA5). The Commission has the same power in an increased rate proceeding, *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 332. The cases cited by Respondents fail to support the proposition that prospective contract terms are immune from a determination by the Commission that they are contrary to public policy.

In *Atlantic Refining Co.* v. *Public Service Commission*, 360 U.S. 378, the Supreme Court held that in issuing certificates the Commission had an obligation to consider the initial price to be charged for the proposed service and, if it issued a certificate, to impose price conditions if the initial price was excessive. Since the prices proposed by the producers are fixed by contract, such a price condition results in a contract modification. In the *Texaco* case the Court affirmed the Commission's imposition of price conditions upon issuance of producer certificates. And in *Mobile*, as the Court observed in the *Texaco* case, *supra*, the Supreme Court did not immunize rate contracts from Commission review or control. The court recognized that if rates could be filed they were subject to paramount powers of the Commission. Almost invariably when the Commission reduces natural gas companies' rates it affects a rate which is con-

tractually authorized. The price provision of a contract is of utmost concern to the parties. In rate cases pipeline companies have numerous contracts with the distributors and, yet, in the Section 5(a) rate cases the Commission orders changes in prices, delivery terms, etc. As pointed out above, such regulatory action has been upheld by the courts. Under the doctrine of primary jurisdiction a private interest in favored-nation contracts must give way to public policy. If Respondents' favored-nation clauses do not serve the public interest under the Act, they should be accorded no force, though of course they may remain in the rate schedules on file with the Commission. If the contracts which the Respondents have made with El Paso prove to be so economically improvident as to endanger the continuity of supply, Respondents have an avenue for relief under the Act. *F.P.C.* v *Sierra Pacific Power Co.*, 350 U.S. 348 (1956).

Favored-nation clauses may not necessarily be against public interest *per se*. They undoubtedly serve a useful purpose in their time. It is conceivable that under certain circumstances an escalation clause is proper. For example, when it takes automatic notice of valid changes in cost to reflect a new "fair and reasonable rate" based on all data recognized pertinent to such pricing. However, it appears to be contrary to public policy to approve the new tariffs herein under consideration because of the particular facts developed in the record. Respondents did not fully meet the burden of proof prescribed in Section 4(e) of the Act. To be sure, an attempt was made to put in the record a general statement that "value of service" jusified the increase. However, Respondents chose to place basic reliance on the triggering affect of the favored-nation clauses. This they did without proper consideration of the "fair and reasonable" level of the rate increases.

Discussion of Contentions

The Respondents, as well as the other parties to the proceeding, stress various single considerations which in their opinion are of sufficient weight to justify a decision in their behalf. None of said contentions are by themselves of sufficient weight to be controlling. The decision in the instant proceeding cannot properly rest on the disposition of any such single contention made. The decision will necessarily reflect the aggregate consideration of all of the contentions made by the Respondents, and be evaluated in light of the counterarguments made by the other parties herein.

When the parties herein entered into the contested contracts apparently they did not foresee subsequent developments. They did not envision a difference of opinion whether a gathering and transportation company such as West Texas is to be considered a seller within the meaning of the favored-nation clause. They did not anticipate controversies pertaining to dry gas as compared with casinghead gas. The type of gas and the pressure consideration was not focused upon either. Now the parties seem to be beyond reconciliation. Respondents claim that the contracts are sufficiently clear; that the absence of specifics merely warrants the application of general contract provisions, a matter for resolution under their respective state contract laws. The interveners and the Staff claim that if the parties had envisioned current developments the contracts would have been written differently; that furthermore, contractural provisions must not impair the regulatory discretion and responsibility of the Commission.

Respondents claim that "acceptance for filing" by the Commission created a status which is *res judicata;* that a principle comparable to laches estops the Commission's surveillance of these rates. The other parties argue that the standard of just and reasonable rates by which the Commission is bound extends to the legal justification for tender and acceptance of changes in rates and charges. *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 332 at 347.

The presentation made by the Respondents herein is essentially the same as the one made in the *Pure Oil* case, though much effort was exerted to make the arguments appear different. However, the differences are not truly substantive. Respondents spent much time highlighting some minor distinctions while the other parties attempted to counter such distinctions. Respondents did not undertake to establish that the proposed increases in charges result in "fair and reasonable rates," though they contended that the value of the service justifies the price increase. Respondents in effect placed utmost reliance on a different interpretation of the contract provisions. The Respondents herein contend that their favored-nation clauses are not ambiguous. The other parties contend that the contract provisions are susceptible to at least two interpretations. They point out that the favored-nation contracts in issue have the following provision:

> * * * due consideration shall be given to the provisions of this agreement as compared with such other contract or agreement as to quantity and quality of gas, delivery pressures, gathering and compressing arrangements, provisions regarding measurement of gas, including deviation from Boyle's law, taxes payable on or with respect to such gas, and all other pertinent factors.

The language "all other pertinent factors" clearly may refer back (1) to the clause "due consideration shall be given to" and, possibly (2) to the clause "the provisions of this agreement as compared with such other contract or agreement as to." On the first interpretation, which the Commission and the Seventh Circuit adopted, we should consider all pertinent factors regarding the sales, whether or not set forth in the contract; on the second, which Respondents advance, just the provisions of the contract themselves are pertinent. Respondents seek to support their interpretation by reference to the fact that no "and" precedes "taxes payable," thereby allegedly giving rise to an inference that all of the phrases, including the final "all other pertinent factors," are in a single parallel series.

On the other hand, the first interpretation can even more easily be supported by noting that the language, "provisions regarding measurement," does not fit into the series which begins with "quantity and quality," but rather, because of the reintroduction of the term "provisions," appears to stand independently. Accordingly, the following two phrases, including the crucial one, are similarly independent of "provisions of this agreement."

That the first interpretation of the contracts is permissible seems to be the opinion of the Commission and the Seventh Circuit Court in the *Pure Oil* case. Query, how much weight should be given herein to the *Pure Oil* decision.

The support presented by Respondents for their favored-nation filings of proposed increased rates and charges appears to rest, directly or indirectly, upon the same operative facts as did the companies in the *Pure Oil* case. It appears that should the legality of the favored-nation increases proposed by the Respondents herein be tested upon the limited issue of whether or not the condition precendent for activation of the provisions of their contracts had occurred by reason of the West Texas sale of gas to El Paso, the dominant operative facts and the questions of law applicable thereto would be found substantially identical to those of record for the increased rates reviewed in the *Pure Oil* case. Thus the Commission's findings and orders here should be consistent with those issued in that proceeding.

The doctrine of *"stare decisis et non quieta movere,"* to stand by precedents and not disturb settled points, is not inflexible or so imperative as to require perpetuation of an error. However, departure from a Commission policy declared is justified only upon substantial grounds and the force of the rule depends upon the nature of the question to be decided and the extent of the dis-

turbance of rights and practices which a change may create. The Commission pointed out that the doctrine of *stare decisis* has applicability even in the field of rate making. In *Panhandle Eastern Pipe Line Co.*, 13 FPC 1570 at page 1573, the Commission held that:

> * * * While we do not take the position that a form of tariff once promulgated by us cannot be changed where facts and circumstances warrant, such changes must be supported by substantial evidence of significant facts and circumstances which would warrant our reconsideration. Mere allegations are insufficient.

Adherence in this proceeding on a *stare decisis* basis to the legal and regulatory principles established in the *Pure Oil* case will not deprive the Respondents of due process.

Summary

The Commission has primary jurisdiction to hear and decide what is in the public interest concerning jurisdictional sales of gas. Respondents failed to discharge their burden of proof and show that their "favored-nation" clauses conform with the criterion of public interest. Two-party favored-nation clauses in Respondents' contracts with El Paso, and indefinite escalation clauses generally, are contrary to public interest. Respondents' favored-nation clauses are contrary to public interest in that they are by their nature and in their effects inherently unreasonable, since there is no economic or other substantial justification for the increase. Pricing practices appropriate to other commodities and businesses, which are either unregulated or are subject to type of regulation unlike that provided by Natural Gas Act have little applicability in determining proper pricing practices for the regulated producer segment of the natural gas industry. Escalation clauses such as appear in Respondents' contracts have by now outlived whatever economic usefulness they may have had. Evidence does not establish that El Paso set up West Texas as a "dummy" corporation to defeat activation of favored-nation clauses in Respondents' contracts. Ambiguities as to language in Respondent-El Paso contracts should be resolved so as to promote objectives of regulation and public interest. The price paid by El Paso to West Texas is not "higher" than the Respondent prices, within the meaning of the escalation provisions, so there has been no escalation of Respondent prices.

FURTHER FINDINGS AND CONCLUSIONS

Upon the facts in evidence, together with the pleadings and the briefs of counsel, it is further found and concluded that:

(1) Respondents, independent producers engaged in the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial and other uses, are "natural-gas companies" within the definition of that term contained in Section 2 of the Natural Gas Act.

(2) Respondents sell natural gas to El Paso Natural Gas Company (a Delaware corporation and a natural gas company operating an interstate transmission pipeline) for resale in interstate commerce under contracts filed with the Commission as Respondents' Gas Rate Schedules specified in the Appendix hereto.

(3) Respondents' said gas rate schedules contain provisions for price escalation of the favored-nation type, which, by their terms, are to be activated by the purchase by El Paso of natural gas produced within certain geographical limits, and under conditions similar to those pertaining to the gas sold to El Paso by Respondents under the said rate schedules, at a price higher than is then being paid to Respondents under said rate schedules.

(4) These rate schedules provide that in determining whether a future purchase of natural gas by El Paso has activated the favored-nation escalation clause of said rate schedules, due consideration shall be given to all other pertinent factors.

(5) On or about December 26, 1958, the West Texas Gathering Company entered into sales of natural gas to El Paso Natural Gas Company at a base price of 18 cents per Mcf. The Respondents, as well as other natural gas companies, thereafter tendered for filing proposed increased rates and charges, in support of which they alleged that the foregoing sale had activated the favored-nation provisions in their contracts or had activated, directly or indirectly, escalation provisions of their contracts for the sale of gas subject to the jurisdiction of the Commission.

(6) Because of the large average volumes available for the wells contracted to and connected with West Texas' pipeline system and the high pressures at which gas is produced from the Emperor Field wells so connected in the Devonian, Fusselman and Ellenberger formations, these wells can be utilized, in periods of peak demand to meet heavy requirements upon the El Paso system in the same manner and with approximately the same effect as an equal volume of gas could be made available from a storage field located as conveniently to the same main line connection points with the said El Paso system.

(7) The availability and usefulness (in lieu of gas from storage) of the gas purchased by El Paso from West Texas under the contract constitutes a "pertinent factor" within the meaning of the terms as used in the contracts filed by the Respondents.

(8) The evidence of record conclusively establishes that the gas purchases by El Paso from the Respondents are of a different nature from the gas purchases from West Texas. The differences are of sufficient magnitude to preclude the activation of the favored-nation clauses.

(9) Respondents' applications for rate increases, specified in the Appendix, are not justified and should be dismissed.

(10) Respondents should be required to refund to El Paso, with interest from date of payment, all sums collected under and by reason of the undertakings filed with the Commission and specified in detail in the Appendix hereto.

(11) The Respondents should be required to bear all cost incidental to the making of the refunds hereinafter ordered.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission, that:

(A) The applications for proposed increased rates and charges named and specified in the Appendix hereto are hereby dismissed for lack of justification.

(B) The increased rates and charges contained in said applicable FPC Gas Rate Schedules are hereby cancelled.

(C) The rates and charges for the sale of natural gas by Respondents to El Paso Natural Gas Company under Respondents' FPC Gas Rate Schedules which were filed and made effective subsequent to the effective dates of the favored-nation rates in issue herein shall remain in force until further action by the Commission.

(D) Within 45 days from the date on which this order shall become effective, Respondents shall refund to El Paso the difference between the amounts collected from El Paso under the supplemental filings and gas rate schedules described in the Appendix hereto, and the rates and charges due and payable by El Paso to Respondents and the said rate schedules of Respondents prior to the filing and suspension of said supplements; together with simple interest at the rate of six percent per annum for the rate schedules suspended before March 1, 1960,

and seven percent for the schedules suspended thereafter (*cf.* Order No. 215A, 23 FPC 474), from the respective dates of the receipt of said excess amounts by Respondents to the date of refund. Respondents shall bear all costs incidental to the making of such refunds.

(E) Within 60 days from the date when this Order shall become effective, Respondents shall report to the Commission in writing and under oath the details of their calculations resulting in refunds ordered pursuant to Paragraph (D) above, together with copies of releases from El Paso with respect to such refunds.

(F) Motions made by various parties during the hearing but thus far not specifically granted are hereby denied.

ALLEN C. LANDE,
Presiding Examiner.

APPENDIX

FAVORED NATION RATE INCREASES IN THE PERMIAN BASIN AREA BASED UPON THE SALE OF WEST TEXAS GATHERING COMPANY TO EL PASO NATURAL GAS COMPANY IN WINKLER COUNTY, TEXAS [1]

[1] All rates shown are at 14.65 psia and include tax reimbursement when applicable.
[2] High pressure gas only.
[3] Based upon increased rates of Shell Oil Company and Hunt Oil Company which were in turn based upon the West Texas Gathering Co. sale.
[4] Based upon increased rates of Shell Oil Company which were in turn based upon the West Texas Gathering Co. sale.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

CITIES SERVICE COMPANY, DOCKET NO. G-16563, ET AL.

ORDER SEVERING APPLICATION AND GRANTING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 18, 1963)

On January 31, 1963, Cities Service Company (Cities), one of the six applicants in the above-consolidated Section 7(c) certificate proceedings, filed a motion for severance and disposition of its certificate applications under the abridged procedure provided in Section 1.12 and Section 1.32 of the Commission's Rules of Practice and Procedure.

Notice of the filing of Cities' application for a certificate and an order providing for hearings upon the application was issued on March 2, 1961. Subsequently hearings were held and concluded. On October 15, 1962 the presiding examiner filed his recommended initial decision. Meanwhile, on October 12, 1962, Cities submitted a Settlement Proposal with respect to the rate issues in a number of its proceedings then pending before the Commission, including its application in Docket No. G-16563.

The sole issue in the proceedings on the instant application of Cities is centered upon the level of the initial price provided for in the gas purchase contract with United Gas Pipe Line Company. However, as Cities has indicated in its Proposal, it is now willing to reduce the initial price from 18.2304¢ to 15.0¢ per Mcf, and accept a certificate on that basis. None of the parties to the settlement proceedings opposed the Proposal and on December 26, 1962, an order issued conditionally approving it.[1] Likewise, none of the parties to the instant consolidated proceeding opposes Cities' motion here. Answers to the motion were due for filing on February 10, 1963, and none were received.

Accordingly, we shall sever Cities' application from the above-captioned proceeding and since all hearings have been completed we shall issue a certificate of public convenience and necessity as hereinafter provided.

The Commission finds:

(1) Good cause exists for the severance of the certificate application in Docket No. G-16563 from the other applications in the above-captioned consolidated proceedings.

(2) Cities Service Company, having already commenced sales to United Gas Pipe Line Company, is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission and is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(3) The sales of natural gas hereinbefore described, as more fully described in Cities' application, will be in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The sales of natural gas by Cities, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered.

---

[1] See "Order Conditionally Approving Rate Settlement Proposal, etc.," issued in *Cities Service Company, et al.*, Docket No. G-8921, *et al.*, on December 26, 1962, 28 FPC 1108.

(5) Cities is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) The application for a certificate of public convenience and necessity filed by Cities Service Company in Docket No. G–16563 is hereby severed from the above-captioned consolidated proceedings.

(B) The certificate of public convenience and necessity be and the same is hereby issued upon the terms and conditions of this order authorizing the sale by the applicant herein of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission used for the sale of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application, amendments and exhibits in this proceeding.

(C) In accordance with the Settlement Proposal, conditionally approved by order of the Commission on December 26, 1962, the initial rate chargeable after that date by Cities Service Company to United Gas Pipe Line Company for the sale of gas certificated herein shall be 15.0¢ per Mcf at 14.65 psia including tax reimbursement; and further, the other provisions of the accepted Settlement Proposal relating to the instant sale are incorporated herein and made a part of this order, including Cities' waiver of its right to file for contractually authorized increased rates until April 1, 1965.

(D) The grant of certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Section 154 of the Commission's Rules and Regulations thereunder, requiring the filing of rate schedules for the services herein authorized, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Cities Service Company. Further, our action in this proceeding shall not foreclose or prejudice any future proceedings or objection relating to the operation of any price or related provisions of the gas purchase contract herein.

(E) The certificate issued herein is not transferable and shall be effective only so long as the applicant continues the acts and operations herein authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

CONTINENTAL OIL COMPANY (OPERATOR), ET AL., FPC GAS RATE SCHEDULE NO. 115

ORDER DENYING APPLICATION FOR REHEARING

(Issued March 18, 1963)

On February 21, 1963, United Gas Pipe Line Company (United) filed an Application for Rehearing of the Commission's acceptance of a unilateral rate increase filing by Continental Oil Company (Operator), *et al.*, (Continental) under its FPC Gas Rate Schedule No. 115. Continental makes jurisdictional

sales of natural gas to United under its FPC Gas Rate Schedule No. 115, from the Johnson Bayou Field, Cameron Parish, Louisiana (South Louisiana). Although the gas purchase contract between Continental and United expired on January 31, 1963, pursuant to notice by Continental to United, authorization to abandon the sale under 7(b) of the Act has not been sought by Continental.

On December 28, 1962, Continental tendered a unilateral proposed rate increase providing for a rate of 15.75¢ per Mcf, including tax reimbursement, at 15.025 psia which is the ceiling rate for increased rate filings in South Louisiana. United protested the proposed increase in January 18, 1963. The proposed increased rate, designated as Supplement No. 7 to Continental's FPC Gas Rate Schedule No. 115, was accepted for filing on January 25, 1963, to be effective as of January 31, 1963.

United contends that Continental has no right to make a unilateral filing. However, in *Sunray Mid-Continent Oil Co.* v. *F.P.C.*,[1] the Supreme Court, distinguishing a producer's (obligations under the Act and under) its contract with the purchaser, stated that:

> The obligation that petitioner will be under after the contract term will not be one imposed by contract but by the Act. It will be free then, as it was not free during the contract term under the contract here in question, to make rate changes under § 4 without United's consent. [364 U.S. 137, at page 155].

While it can be argued that this language in the *Sunray* case is dictum, we think it properly states the law.[2] Since the contract has expired, Continental is not barred from filing a unilateral increase.

United further contends that the Commission was required to institute a formal hearing on United's protest to Continental's rate filing. United's argument is a legal one, presenting no factual issues for determination. Under these circumstances, we were not required to hold a hearing. See *Mississippi River Fuel Corp.* v. *F.P.C.*, 281 F. 2d 919, at 927.

United's other arguments are related to Continental's petition for an order to show cause, filed on February 1, 1963 in Docket No. CI63-979. Accordingly, these arguments will be considered in connection with that matter.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing present no new facts or principles of law which were not considered by the Commission in accepting Continental's increased rate filing, or which having now been considered warrant any change or modification of the Commission's action.

The Commission orders:

The application for rehearing filed by United Gas Pipe Line Company on February 21, 1963, is hereby denied.

---

[2] Our position here is also consistent with the action taken by us in a number of previous cases. See *Phillips Petroleum Company*, Docket No. G-20352, order issued December 16, 1959; *Continental Oil Company*, Docket No. RI60-165, and *Wrightsman Oil Company*, Docket No. RI60-163, order issued February 24, 1960; *Phillips Petroleum Company*, Docket No. RI60-336, order issued May 11, 1960.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP60-58

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 18, 1963)

On August 27, 1962 as supplemented on September 11, 1962, El Paso Natural Gas Company (El Paso) filed in Docket No. CP60-58 an application to amend the Commission's order issued September 2, 1960, 24 FPC 394, as amended, in said docket to delete therefrom authorization to construct and operate facilities necessary to provide an additional 4800 compressor horsepower and additional purification and dehydration capacity at El Paso's Goldsmith Compressor Station in Ector County, Texas, all as more fully set forth in the application to amend.

The order of September 2, 1960, issued El Paso a certificate of public convenience and necessity authorizing the construction and operation of certain facilities to provide an additional 6,800 compressor horsepower and additional purification and dehydration capacity at the Goldsmith Compressor Station. El Paso states herein that it has installed only 2000 of the authorized horsepower and that the remaining authorized 4800 horsepower and the purification and dehydration facilities were not constructed and are not needed. El Paso states further that 4800 of the authorized horsepower facilities and the purification and dehydration facilities are not required because of the extension of the term of an industrial sales contract, thus eliminating the need for processing and compressing this gas in the immediate future. Further, El Paso indicates that the deliverability estimates for the field supplying gas to the Goldsmith Station, relied upon in the original application herein, were based upon a monthly average of 11 producing days, whereas the allowable producing days for these fields have averaged less than 9 days per month since filing of the application. Hence, the total additional quantities of natural gas originally contemplated to be available at the Goldsmith location have never been realized. El Paso states that further incremental horsepower additions and additional dehydration and purification capacity will be required only upon significant upward variation in the present level of producing days established by the Texas Railroad Commission and termination of the industrial sale.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on February 12, 1963 (28 F.R. 1358). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued September 2, 1960, in Docket No. CP60-58 be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued September 2, 1960, in Docket No. CP60-58 be and the same is hereby further amended to delete therefrom authorization for the construction and operation of 4800 compressor horsepower and the purification and dehydration facilities therein authorized, all is hereinbefore described and as set forth in the subject application, as supplemented.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP63-196

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 18, 1963)

On January 7, 1963, Florida Gas Transmission Company (Applicant), filed in Docket No. CP63-196 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities for the purpose of making sales of natural gas to the Town of Altha, Calhoun County, Florida, for resale to consumers in the municipality and surrounding area. The facilities proposed consist of a metering and regulating equipment at a point on Applicant's 24-inch main transmission pipeline, all as more fully described in the application.

The estimated gas requirements for the area to be served through these facilities are as follows:

	First year	Second year	Third year
	Mcf	*Mcf*	*Mcf*
Peak day	95	95	95
Annual	8,400	8,520	8,640

The proposed sale is to be made under Rate Schedule G of Applicant's FPC Gas Tariff, Original Volume No. 1. The total estimated cost of the facilities is $10,640 which will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 7, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation having its principal place of business in Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1956, in Docket Nos. G-9262 and G-9960 (16 FPC 118).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Florida Gas Transmission Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sales of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

LONE STAR GAS COMPANY, DOCKET NO. CP63-152

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued March 18, 1963)

On November 30, 1962, Lone Star Gas Company (Applicant) filed in Docket No. CP63-152 an application pursuant to Section 7(b) of the Natural Gas Act, for authority to abandon 5,615 feet of 4-inch Line TE-A, extending from the tap for Line FX-398-T to Station 1 plus 23 in a southwesterly direction to the connection of the Ambassador Oil Corporation, *et al.* Virgil McPhail No. 1 Well, in Loco District, Stephens County, Oklahoma, as more fully described in the application.

Applicant states that the said facilities are connected with the well which can no longer produce gas against the working pressures normally maintained in its pipeline system so that no service is being rendered by such facilities.

The total estimated cost of removal of the facilities above described is $2,026, and the salvage value is $1,830.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 4, 1963 respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff Counsel moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company within the meaning of the Natural Gas Act and the facilities described herein above were authorized by the Commission in Docket No. G–14136 by order issued on May 12, 1958, and are subject to the jurisdiction of the Commission, 19 FPC 670.

(2) The available supply of natural gas from the well to which the facilities are attached has become so depleted as to render further service therefrom unwarranted so that the present and future public convenience and necessity permits abandonment thereof.

(3) A request made during the public hearing by Staff Counsel for the omission of the intermediate decision procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record, and not having been denied by the Commission is granted pursuant to Section 1.30(c)(1) of the rules.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon and remove the facilities heretofore described, as more fully described in the application.

(B) Applicant shall within ten days after removal of the said facilities from their emplacement advise the Commission thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62–307

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 18, 1963)

On June 29, 1962, as supplemented on August 20, 1962, Northern Natural Gas Company (Applicant) filed in Docket No. CP62–307 an application pursuant to Section 7(c) of the Natural Gas Act for certificate of public convenience and necessity authorizing the construction and operation of facilities for the testing and development of the Vincent underground natural gas storage field in Humboldt, Webster, and Wright Counties, Iowa, all as more fully set forth in the application as supplemented.

Information made available to Applicant by the Iowa Geological Survey indicates the possible existence of a suitable underground structure, and Applicant desires to initiate a program of shallow well drilling to test the structure. The Iowa State Commerce Commission has issued a permit to Applicant authorizing the storage of natural gas in the proposed Vincent Storage Field. Before engaging in full scale operation of any proven reservoirs, Applicant will make the necessary certificate application to the Commission.

The total estimated cost of the necessary facilities is $209,600 of which $90,000 reflect cost of material which can be transferred from the Redfield Storage Field and thus will not involve any additional cash outlay. The project will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 7, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or notice of intervention has been received. A petition to intervene was filed on September 4, 1962, by Northwestern Public Service Company and was withdrawn on January

14, 1963. No other petitions to intervene have been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceedings, will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) Public convenience and necessity require that the maximum inventory of gas stored in the Vincent Storage Field should be limited to 5,000,000 Mcf and that this order should not be construed as authorizing accounting provisions for estimated ultimate losses (or depreciation) of stored gas, other than may be authorized in accordance with the provisions of the Commission's Uniform System of Accounts.

(7) Public convenience and necessity require that Applicant should submit monthly reports on the testing operations containing such information as hereinafter ordered.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities as hereinbefore described, and as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's

Regulations under the Natural Gas Act, within one year from the date on which this order issues.

(D) The maximum inventory of gas stored in the Vincent Storage Field shall be limited to 5,000,000 Mcf, and this order shall not be construed as authorizing accounting provisions for estimated ultimate losses (or depreciation) of stored gas, other than may be authorized in accordance with the provisions of the Commission's Uniform System of Accounts.

(E) Applicant shall submit monthly reports containing the following information on the proposed testing operations:

(a) The volumes of natural gas injected or withdrawn together with the corresponding total volumes in the reservoir;

(b) The maximum daily injection or withdrawal rate experienced during the month;

(c) The average working pressure on such maximum days taken at a central measuring point where the total volume injected or withdrawn is measured;

(d) The water level in each observation well;

(e) The stabilized shut-in wellhead pressure of each observation and active well when pressure stabilization exists; and a graph shall accompany the report showing the injection and withdrawal rates by days, the water levels, and the stabilized shut-in wellhead pressures for each observation well by days;

(f) All gamma ray, neutron, or other electric log surveys;

(g) All core analyses;

(h) For each well, the date on which gas was first noted during injection and the date on which water seriously encroached during withdrawal;

(i) A map showing the latest concept of structure based on development and the pressures requested in (e) above shall be shown when taken together with the area occupied by the gas bubble, as indicated by the information requested in (b) above;

(j) Status of acreage control for storage purposes;

(k) Status of permits required by State agencies having jurisdiction;

(l) Back pressure data and curves;

(m) Discussion of current operations and conclusions with respect to input capacity at various inventories, input pressure at wells, and the ability of the storage reservoir to retain gas; and

(n) any other data which may aid the Commission in the evaluation of the Vincent gas storage project.

Before Commissioners: Joseph C. Swidler, Chairman: Howard Morgan, and L. J. O'Connor, Jr.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP63–160

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 18, 1963)

On December 7, 1962 (supplemented on January 18, 1963), The Ohio Fuel Gas Company (Applicant) filed in Docket No. CP63–160 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 0.6 mile of 20-inch O.D. and 10.2 miles of 16-inch O.D. natural gas transmission pipeline in Montgomery and Miami Counties, Ohio, looping part of its existing facilities serving the Troy-Sidney market area, together with valves, fittings and other incidental facilities necessary for practical operation, all as more particularly described in the application.

Applicant shows that the proposed facilities are necessary to maintain adequate service to its existing market areas north of Dayton, Ohio. Service will be rendered under filed rates.

The estimated cost of construction of the proposed facilities is $580,000 which will be financed through The Columbia Gas System, Inc., the parent company of Applicant.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 7, 1963, respecting the matters involved in and the issues presented by the application, as supplemented. No protest to the granting of the application and no petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) The Ohio Fuel Gas Company is a "natural-gas company" within the meaning of the Natural Gas Act and the facilities proposed to be constructed and operated will become integral parts of the Applicant's existing transportation system.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing The Ohio Fuel Gas Company, to construct and operate the facilities described all as more fully described in the application, upon the terms and conditions of this order.

(B) The certificate issued and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable rules and regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(C) The construction of the facilities authorized by this certificate shall be completed and the facilities be placed in operation within eight months from the date of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

PUBLIC UTILITY DISTRICT NO. 1 OF PEND OREILLE COUNTY, WASHINGTON, PROJECT NO. 2042

ORDER APPROVING REVISED PROJECT EXHIBITS AND ADJUSTING ANNUAL CHARGES

(Issued March 18, 1963)

On June 12, 1961, Public Utility District No. 1 of Pend Oreille County, Washington, licensee for major Project No. 2042 [issued, 11 FPC 786 (1952)], filed for Commission approval revised Exhibits K and L. The project, known as the Box Canyon Project, is situated on the Pend Oreille River in the State of Washington, and affects lands of the United States within the Kaniksu and Coleville National Forests.

Commission approval of revised Exhibit L would allow the project to be so operated that the backwater on the Albeni Falls project of the Corps of Engineers, Department of the Army, would be two feet instead of one foot. Commission approval of revised Exhibit K would reflect minor changes in the project boundary to include therein 0.29 acre of lands of the United States affected by the increase in backwater effect in the lower end of the project reservoir, with a resultant increase in the annual charges for the use of such lands.

The licensee states that the proposed changes are necessary and desirable because experience has shown that the original backwater curves do not provide for sufficient head loss through the canyon immediately upstream from the Box Canyon dam, thus reducing the available head at Box Canyon when maintaining one foot of backwater at Albeni Falls. The licensee stated also that the proposed two feet of backwater at Albeni Falls will provide some additional head over that originally contemplated at Box Canyon dam.

The Secretary of the Army and the Chief of Engineers, have reported that the proposed increase in backwater will have no adverse effect on navigation interest; that additional license terms or conditions in the interest of navigation are not considered necessary; and that the existing agreement between the licensee and the Corps, required by Article 29 of the license, provides for repayment of power loss at Albeni Falls based on the actual backwater experienced during operation, and, therefore, the agreement will not require change because of the proposed increase in backwater.

The Department of Agriculture has advised that the affected Exhibit K, sheet 1 (FPC No. 2042–12), as revised to show the additional lands of the United States to be occupied by the project, is adequate for the protection and utilization of the Coleville National Forest, and there is no objection to Commission approval of the revised exhibit.

The staff has made the changes in the affected Exhibit K and L tracings pursuant to the licensee's authorization in letter dated October 11, 1961.

The Commission finds:

(1) Exhibit K–1 through –5 (FPC No. 2042–12 through –16), as revised, and Exhibit L–5 and –6 (FPC No. 2042–23 and –24), as revised, conform to the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit K–1 through –5 (FPC No. 2042–12 through –16) and Exhibit L–5 and –6 (FPC No. 2042–23 and –24) now parts of the license and which have been superseded should be eliminated from the license.

(2) The increased annual charges for recompensing the United States for the use of additional lands of the United States by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The revised exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2042, and the exhibits described in the same finding as being superseded are hereby eliminated from the license.

(B) Subparagraph (ii) of the Article 36 of the license, as revised, is further revised to read as follows:

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, $338.26.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

TENNESSEE GAS TRANSMISSION COMPANY AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP63-177

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 18, 1963)

On December 21, 1962, Tennessee Gas Transmission Company (Tennessee) and Texas Eastern Transmission Corporation (Texas Eastern), filed in Docket No. CP63-177 their joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity to construct and operate four interconnections between their pipeline systems at points located in Jackson County, Texas, Allen Parish, Louisiana, Scioto County, Ohio and at river crossings in Issaquena County, Mississippi, all as more fully set forth in the application.

The Applicants state that the purpose of the facilities proposed is to enable them to render emergency gas service to each other when required. All emergency deliveries will be returned in kind.

The estimated total cost of the interconnections is $404,380. $243,640 of this amount will be shared equally and the difference will be paid by each Applicant for separate taps and side valves on its own facilities. All costs will be financed from company cash on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 6, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff Counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Tennessee Gas Transmission Company and Texas Eastern Transmission Corporation are natural gas companies within the meaning of the Natural Gas Act.

(2) The facilities hereinbefore described are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the

Commission, and the construction and operation thereof as integral parts of these Applicants' pipeline systems are subject to the requirements of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations thereunder.

(4) The construction and operation of the proposed interconnection facilities for the purposes stated in the application are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by Staff Counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicants, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP63-96; ALGONQUIN GAS TRANSMISSION COMPANY, DOCKET NO. CP63-97

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 18, 1963)

On October 16, 1962, as supplemented on November 6, 1962, Texas Eastern Transmission Corporation (Texas Eastern) filed in Docket No. CP63-96 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities to provide approximately 40,800 Mcf (14.73 psia) of additional natural gas capacity per day on its pipeline system and the sale and delivery of an additional 39,384 Mcf of natural gas per day to certain customers, all as more fully set forth in the application, as supplemented.

Specifically, Texas Eastern proposes to construct and operate the following facilities, together with necessary appurtenances:

(1) A compressor station near Yazoo, Mississippi, of approximately 8,000 horsepower;

(2) Approximately 57 miles of 30-inch pipeline loops on its transmission system at various locations and in varying amounts between Kosciusko, Mississippi, and Station 21-A in Lafayette County, Pennsylvania;

(3) Approximately 5.75 miles of 30-inch pipeline loops on its transmission system at various locations and in varying amounts between Delmont Station in Westmoreland County, Pennsylvania, and Station No. 26 in Hunterdon County, Pennsylvania;

(4) Changeout impellers in existing compressors at various compressor stations, including compressor stations near Egypt, Mississippi; Barton, Alabama; Mt. Pleasant, Tennessee; Gladeville, Tennessee; Tompkinsville, Kentucky; Owensville, Kentucky; Wheelersburg, Ohio; Athens, Ohio, and Berne, Ohio;

(5) Changeout guide vanes in existing compressors at Armagh and Entriken, Pennsylvania, Compressor Stations;

(6) A meter and regulating station located on the Public Service lateral near Hanover, New Jersey, for deliveries to New Jersey Natural Gas Company;

(7) A meter and regulating station located on the Public Service lateral near Hanover, New Jersey, for deliveries to Algonquin Gas Transmission Company, and,

(8) A meter and regulating station located on the Perth Amboy lateral for deliveries to Elizabethtown Consolidated Gas Company

Texas Eastern proposes to sell and deliver, under long term service agreements and its Annual Firm FPC Gas Rate Schedules, the following daily quantities of natural gas, in addition to the volumes previously authorized, to the following customers:

Customers	*Mcf at 14.73 psia*
Algonquin Gas Transmission Company	22,333
City of Batesville, Indiana	221
Elizabethtown Consolidated Gas Company	1,530
Town of Franklin, Tennessee	204
Illinois Electric and Gas Company	1,020
Missouri Utilities Company	2,550
National Gas and Oil Company	1,020
New Jersey Natural Gas Company	5,100
Public Service Electric and Gas Company	5,100
United Cities Gas Company, Illinois Division	204
United Cities Gas Company, Tennessee Division	102

The application shows the estimated cost of the proposed facilities to be $14,839,000, which cost will be financed by the issuance of 4½% revolving credit notes.

On October 16, 1962, Algonquin Gas Transmission Company (Algonquin) filed in Docket No. CP63-97 an application pursuant to Section 7(c) of the Natural Gas Act authorizing the construction and operation of certain facilities necessary to provide additional daily design capacity on its pipeline system and the sale and delivery of an additional 22.115 Mcf (14.73 psia) of natural gas per day to certain customers, all as more fully set forth in the application.

Specifically, Algonquin proposes to construct and operate the following facilities, together with necessary appurtenances:

(1) Approximately 18.2 miles of 30-inch pipeline loop in New Jersey and New York extending from Valve 11, Oakland, New Jersey, to the Stony Point Compressor Station;

(2) Approximately 3.1 miles of 30-inch pipeline loop in New York extending from Stony Point Compressor Station to Valve 14A at the Hudson River;

(3) Approximately 22.7 miles of 30-inch pipeline loop in New York and Connecticut extending from Valve 15, Yorktown, New York, to Valve 19 in Danbury, Connecticut, and,

(4) Approximately 11.4 miles of 30-inch pipeline loop in Connecticut and Rhode Island extending from Valve 35, Pomfret, Connecticut, to the Burrillville Compressor Station.

Algonquin proposes to sell and deliver, under long-term service agreements and its FPC Gas Rate Schedule F–1, the following daily quantities of natural gas, in addition to the volumes previously authorized, to the following customers:

Customer	*Mcf at 14.73 psia*
Boston Gas Company	8,500
Brockton Taunton Gas Company	2,602
Buzzards Bay Gas Company	800
The Connecticut Gas Company	2,700
Fall River Gas Company	1,500
The Hartford Gas Company	1,400
New Haven Gas Company	2,000
North Attleboro Gas Company	50
Norwood Gas Company	263
Providence Gas Company	1,500
Worcester Gas Light Company	800

The application shows the estimated cost of the proposed facilities to be $12,116,300, which cost will be financed by retained earnings and short-term bank loans.

Algonquin states that it will purchase from its sole supplier, Texas Eastern, the additional volumes of natural gas necessary to make the proposed sales.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 5, 1963, respecting the matters involved in and the issues presented by the applications in this consolidated proceeding. A number of petitions to intervene have been filed in the subject dockets by various interested companies. In all cases, the burden of such filings has been that the petitioners did not request formal hearing herein and did not object to the hearing and disposition of the subject applications under the shortened procedure provided for by the Commission's Rules, but that each petitioner desired to preserve its rights to appear and participate fully in the event that these matters should be set for formal hearing. Inasmuch as the abridged hearing procedure is being used herein, no further action on the various intervention petitions appears necessary.

No protests to the granting of the applications having been received and no other appearances having been entered at the hearing, staff counsel moved orally that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G–880 (6 FPC 148).

(2) Applicant, Algonquin Gas Transmission Company, a Delaware corporation having its principal place of business in Boston, Massachusetts, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of February 26, 1951, in Docket No. G–1319 (10 FPC 35).

(3) The facilities hereinbefore described, as more fully described in the applications in Docket Nos. CP63–96 and CP63–97, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation

and sales of natural gas by Texas Eastern and Algonquin are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Texas Eastern and Algonquin are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities and the proposed sales of natural gas by Texas Eastern and Algonquin are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulation.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Applicant, Texas Eastern Transmission Corporation, and Applicant, Algonquin Gas Transmission Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, in Docket No. CP63–96, and the application in Docket No. CP63–97, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized in Docket Nos. CP63–96 and CP63–97 shall be constructed and placed in actual operation and the sales of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

TWIN GAS COMPANY,[1] DOCKET NO. CP63–144

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued March 18, 1963)

On November 23, 1962, as supplemented on December 31, 1962, and February 20, 1963, Twin Gas Company (Applicant) filed in Docket No. CP63–144 an application

[1] The subject application was originally filed as and noticed as John H. Ware, III, C. E. Martin and Ralph N. Evans, Original Incorporators of Twin Gas Company. The second supplement, filed on February 20, 1963, indicates that by order of February 18, 1963, the Pennsylvania Public Utility Commission approved the incorporation, organization and creation of Twin Gas Company.

pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Texas Eastern Transmission Corporation (Texas Eastern) to establish physical connection of its transmission facilities near the Borough of Bedford, Pennsylvania, with the proposed facilities of Applicant, and to sell natural gas to Applicant for resale and distribution in Bedford, and environs, all as more fully set forth in the application, as supplemented.

Applicant proposes to construct and operate a distribution system in Bedford as well as 8 miles of 4-inch pipeline from Texas Eastern's transmission line to Bedford and to a proposed plant of Standard Register Company (Standard) which plant Applicant proposes to serve.

The cost of the proposed facilities is estimated to total $194,400, which cost will be financed by funds provided by Penn Fuel Gas, Inc., the parent of Applicant. Standard will also provide $12,000 as an advance in aid of construction.

The application shows the estimated third year peak day and annual natural gas requirements of Applicant to be 488 Mcf and 72,550 Mcf, respectively.

The application indicates that Applicant has received appropriate authorization from the Pennsylvania Public Utility Commission and from the Borough of Bedford.

On December 12, 1962, Texas Eastern filed its answer to the subject application, stating that it would abide by the Commission's order issued herein.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on February 2, 1963 (28 FR 1087). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G-880 (6 FPC 148).

(2) Applicant, Twin Gas Company, is a public utility duly organized and existing under the laws of the Commonwealth of Pennsylvania and authorized to engage in the business of distributing and selling natural gas within said Commonwealth.

(3) It is necessary and desirable in the public interest that Texas Eastern be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 488 Mcf of natural gas per day to Applicant, as set forth in the application, as supplemented, and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Texas Eastern within one year from the date of issuance of this order.

(5) The requirement that Texas Eastern serve Applicant, as proposed, will not place any undue burden upon Texas Eastern nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Texas Eastern Transmission Corporation be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 488 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application, as supplemented.

(B) Applicant shall be prepared to receive natural gas from Texas Eastern within one year from the date of issuance of this order.

(C) Texas Eastern shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-108

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 18, 1963)

On October 29, 1962, as supplemented on December 19, 1962, United Gas Pipe Line Company (Applicant) filed in Docket No. CP63-108 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas to the Village of Tangipahoa, Tangipahoa Parish, Louisiana (Village), for resale and distribution in said Village, all as more fully set forth in the application, as supplemented.

Applicant proposes to construct and operate approximately .01 mile of 2-inch pipeline, a sales meter station and appurtenant facilities on its 30-inch pipeline in Tangipahoa Parish, Louisiana. The estimated cost of the proposed facilities is $6,137, which cost will be financed by Applicant out of current working funds.

The application indicates that the Village will purchase the existing distribution facilities within the corporate limits of said Village from the present owner and distributor, the Town of Kentwood, Louisiana. Village will also construct and operate a pipeline from the distribution system to Applicant's proposed facilities. The approximate cost of construction of facilities and the purchase cost of distribution facilities is estimated to be $31,000. Village will finance these costs by the issuance of revenue bonds and by a proposed grant of $77,600 from the Federal Government under the Accelerated Public Works Program. $12,000 of the Federal grant would be applicable to the Village's natural gas project.

The third year estimated peak day and annual natural gas requirements for the Village are 88 Mcf and 6470 Mcf, respectively.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 7, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and

necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) The certificate hereinafter issued to Applicant is conditioned upon the Village's obtaining a grant of $77,600 under the Accelerated Public Works Program, $12,000 of said grant being applicable to the Village's natural gas project.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sales of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) The certificate issued to Applicant in paragraph (A) above is hereby conditioned upon the Village's obtaining a grant of $77,600 under the Accelerated Public Works Program, $12,000 of said grant being applicable to the Village's natural gas project.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

CARNEGIE NATURAL GAS COMPANY, DOCKET NO. CP63-191

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND SERVICE AND ACCEPTING NOTICES OF CANCELLATION OF RATE SCHEDULE AND TERMINATION OF SERVICE AGREEMENT

(Issued March 19, 1963)

On December 26, 1962, Carnegie Natural Gas Company (Applicant) filed in Docket No. CP63-191 an application pursuant to Section 7(b) of the Natural Gas Act for permission to abandon certain facilities located in Lincoln District, Marion County, West Virginia and to abandon the sale of gas to Hope Natural Gas Co. from such facilities. The facilities consist of valves, gates, fittings and other appurtenances which were used and useful in making deliveries of natural gas to Hope Natural Gas Company from lands in Marion and Magnolia Counties, West Virginia until December 1961, at which time gas availability declined to a point where the sale and purchase of gas was no longer economical. No sale

of natural gas by Applicant to Hope Natural Gas Company has been made during the 12-month period preceding December 1962. Carnegie states that Hope has disconnected its metering facilities from Carnegie's facilities.

Applicant shows that the facilities above described are no longer of any use to it or to the public and the public convenience and necessity does not require them.

Concurrently with its abandonment application, Carnegie filed First Revised Sheet No. 7 to its FPC Gas Tariff, First Revised Volume No. 1 constituting a Notice of Cancellation of its Rate Schedule S–2 and a Notice of Termination of its service agreement with Hope, dated October 22, 1957, under which it sold gas to Hope from the subject facilities. Carnegie requested an effective date of January 28, 1963 for the rate filings.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 7, 1963 respecting the matters involved in and the issues presented by the application. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision herein pursuant to Section 1.40(c) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company within the meaning of the Natural Gas Act and the facilities and sale hereinbefore described are subject to the jurisdiction of the Commission.

(2) The available supply of natural gas from the field served by the facilities has declined to the point that further operation thereof is unwarranted and abandonment thereof and sale of gas to Hope Natural Gas Co. therefrom should be permitted and approved.

(3) A request during the public hearing by Staff Counsel for omission of the intermediate decision procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the said rules.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon the facilities and sale of gas as heretofore described, as more fully described in the application.

(B) Applicant shall advise the Commission as to the date of abandonment of the facilities within 10 days thereof.

(C) Applicant's request for an effective date of January 28, 1963, for its rate filings, described herein, is hereby denied. Such rate filings are hereby accepted to become effective on the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

CENTRAL WISCONSIN GAS COMPANY, DOCKET NO. G–9813

ORDER DISMISSING APPLICATION

(Issued March 19, 1963)

On December 23, 1955, Central Wisconsin Gas Company, (Central) filed an application pursuant to Section 7(a) of the Natural Gas Act for an order directing Midwestern Gas Transmission Company (Midwestern) to establish physical

connection of its proposed transportation facilities with the facilities of Central and to sell and deliver to Central its natural-gas requirements for the cities of Waupaca, Sparta, and Tomah, Wisconsin. Central's application was dependent upon Midwestern's receipt of a certificate of public convenience and necessity authorizing the construction of the pipeline system which Midwestern proposed to construct and operate in its application filed in Docket No. G–9451. The order accompanying Opinion No. 316 issued October 31, 1958, in *American Louisiana Pipe Line Company, et al.*, Docket No. G–2306, *et al.*, 20 FPC 575, denied Midwestern's application filed in Docket No. G–9451. Thereafter Michigan Wisconsin Pipe Line Company was authorized to sell gas to Central for initiating natural-gas service in Waupaca by the order accompanying Opinion No. 331 issued October 31, 1959, in *Midwestern Gas Transmission Company, et al.*, Docket No. G–18313, *et al.*, 22 FPC 775.

On November 20, 1961, Central filed a notice of withdrawal of its application in Docket No. G–18227 wherein Central sought, *inter alia*, to have Northern Natural Gas Company (Northern) ordered to supply Central with natural gas for distribution in Sparta and Tomah, Wisconsin. Central's notice stated that Milwaukee Gas Light Company (Milwaukee Gas) had acquired all the assets of Central and that Central no longer operated as a gas public utility in the State of Wisconsin. This notice of withdrawal also indicated that on September 28, 1961, Northern had filed an application in Docket No. CP62–85 in which Northern is proposing to sell and deliver natural gas to Milwaukee Gas for distribution by the latter in Sparta and Tomah, Wisconsin.

The Commission finds:

The denial of Midwestern's application in Docket No. G–9451, the acquisition by Milwaukee Gas of Centrals' assets, and the actual extension of natural-gas service, or present proposal to extend such service, to all the communities for which Central sought to obtain natural gas in its application in Docket No. G–9813 renders the application filed by Central in Docket No. G–9813 moot.

The Commission orders:

Central Wisconsin Gas Company's application in Docket No. G–9813, filed December 23, 1955, is hereby dismissed as moot.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

LONE STAR GAS COMPANY, DOCKET NO. CP63–195

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 19, 1963)

On January 4, 1963, Lone Star Gas Company (Applicant) filed in Docket No. CP63–195 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 1.24 miles of 6-inch natural gas pipeline attached to and extending from a point on Applicant's existing Line E in a northerly direction to the proposed measuring station and including appurtenant metering and regulating facilities, to be located on the premises of the Campbell Soup Company Plant near the north boundary of the City of Paris, Lamar County, Texas.

The estimated volumes of gas requirements of the customer are as follows: 390,000 Mcf during the first year, 1,170,000 Mcf by the end of the fifth year, with an estimated peak day demand not to exceed 5,470 Mcf.

The estimated costs of the proposed facilities are $21,000 for the pipeline and $10,200 for the measuring station, all of which costs will be financed from working capital.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 4, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff Counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Lone Star Gas Company, is a natural gas company within the meaning of the Natural Gas Act and as heretofore found by the Commission in Docket No. G–442 (4 F.P.C. 565).

(2) The proposed facilities hereinbefore described will become an integral part of Applicant's existing interstate pipeline and will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission and the construction and operation thereof by the Applicant are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Lone Star Gas Company to construct and operate the facilities hereinbefore described, and to sell and deliver natural gas to the Campbell Soup Company in volumes not to exceed 5,470 Mcf per day in any one day for industrial purposes.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly Section 157.20 of said Regulations.

(C) Applicant shall advise the Commission of the date of completion of the facilities on or before September 1, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

SUN OIL COMPANY, DOCKET NO. RI60-370

ORDER DENYING MOTION TO TERMINATE PROCEEDING

(Issued March 19, 1963)

On July 15, 1960, Sun Oil Company (Sun) filed a motion requesting that the above-designated rate suspension proceeding be terminated.

On May 5, 1960, Sun tendered for filing a notice of change in its FPC Gas Rate Schedule No. 84, for the jurisdictional sale of natural gas to Northern Natural Gas Company (Northern) from the West Perryton Field, Ochiltree County, Texas (Railroad Commission District No. 10). Concurrently with the above tender, Sun tendered for filing the amendatory agreement to its rate schedule, upon which the notice of change was based. By order issued June 1, 1960, the amendatory agreement and the proposed increased rate of 16.5¢ per Mcf, designated respectively as Supplement Nos. 5 and 6 to its FPC Gas Rate Schedule No. 84, were suspended until November 5, 1960, when, upon proper motion, the proposed increased rate became effective subject to refund.

Sun's amendatory agreement provided that in return for Sun's waiver of its right to extract liquefiable hydrocarbons from the gas, Northern would pay an additional 1¢ per Mcf to Sun. In support of its motion to terminate, Sun states that Sunray Mid-Continent Oil Company (Sunray)[1] filed an identical amendatory agreement with the same purchaser in the same area, which was accepted by the Commission without suspension.

Sunray's filing of the amendatory agreement was not treated by the Commission as a change in rate but merely a contractual vehicle under which Sunray could at a future date file a notice of change in rate. It was accordingly accepted for filing as a contractual amendment.[2] Sunray thereafter tendered a notice of change in rate, based on the amendatory agreement, which was suspended by Commission order issued October 14, 1960, in Docket No. RI61-119. We also note that Sun's increased rate exceeds the applicable area price level announced in the policy statement.[3] Under these circumstances, no basis exists for Sun's motion to terminate.

The Commission finds:

For the foregoing reasons, Sun's motion to terminate the proceeding in Docket No. RI60-370 should be denied.

The Commission orders:

The motion to terminate the proceeding in Docket No. RI60-370, filed by Sun on July 15, 1960, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

THE OHIO FUEL GAS COMPANY, DOCKET NO. CP63-185

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 20, 1963)

On December 27, 1962, The Ohio Fuel Gas Company (Applicant) filed in Docket No. CP63-185 an application pursuant to Section 7(c) of the Natural

[1] Now Sunray DX Oil Company.

[2] The proper interpretation of the Commission's action was clearly set forth by the Commission in a letter issued July 25, 1960. Such interpretation was thereafter affirmed in *Sunray Mid-Continent Oil Company* v. *F.P.C.*, 290 F. 2d 552 (1961).

[3] Statement of General Policy No. 61-1, issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

Gas Act for a certificate of public convenience and necessity authorizing the construction and acquisition during the calendar year 1963 and the operation of unspecified minor natural gas transmission facilities and the sale of natural gas in the general area presently served by Applicant, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in establishing new delivery points for rendition of service to communities, not now being served, or expansion of service in and around communities presently served either at retail by Applicant or through sales to existing wholesale customers for resale.

Total peak day volumes to be delivered under the subject authorization will not exceed a maximum of 25,000 Mcf of gas, and volumes to be delivered through any single delivery point will not exceed 5,000 Mcf of gas, in the third year of proposed service.

The total cost of the proposed facilities will not exceed a maximum of $250,000, and no single project will exceed a cost of $50,000. The proposed facilities will be financed from the sale of securities to The Columbia Gas System, Inc.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 7, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, The Ohio Fuel Gas Company, an Ohio corporation having its principal place of business in Columbus, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued August 21, 1945, in Docket No. G-371 (4 FPC 1033).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction, acquisition, and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction, acquisition, and operation of facilities, and the transportation and delivery of natural gas as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate to require that none of the facilities constructed under the certificate herein granted shall be used for the transportation or sale of natural gas for consumption as boiler fuel for the generation of electricity.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration

of the authorization hereinafter granted, a statement showing by projects: (a) location of facilities, including delivery points; (b) communities served, including respective distributors; (c) description and actual final cost of facilities; (d) anticipated third year peak day and annual deliveries; (e) applicable rate schedules and expected third year annual gross revenue; and (f) the volumes of gas sold directly or for resale for interruptible industrial consumption.

(8) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the service hereinafter authorized should be conditioned upon receipt by Applicant or its wholesale customers of all necessary state and local authorizations to render the local service described.

(9) The authorization hereinafter granted should be limited to construction and acquisition during the calendar year 1963, and the total expenditures for facilities to be constructed and acquired thereunder should be limited to a maximum of $250,000, with no single project to exceed a cost of $50,000.

(10) Public convenience and necessity require that the estimated deliveries for the third year peak day at any single new delivery point should be limited to a maximum of 5,000 Mcf of gas and for all new delivery points established should be limited to a combined maximum of 25,000 Mcf of gas.

(11) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, The Ohio Fuel Gas Company, to construct and acquire during the calendar year 1963 and to operate the proposed facilities and to transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (a) and (e) of Section 157.20 of such Regulations.

(C) None of the facilities constructed under the certificate herein granted shall be used for the transportation or sale of natural gas for consumption as boiler fuel for the generation of electricty.

(D) Applicant shall submit within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) location of facilities, including delivery points; (b) communities served, including respective distributors; (c) description and actual final cost of facilities; (d) anticipated third year peak day and annual deliveries; (e) applicable rate schedules and expected third year annual gross revenue; and (f) the volumes of gas sold directly or for resale for interruptible industrial consumption.

(E) The service authorized by paragraph (A) above is conditioned upon receipt by Applicant or its wholesale customers of all necessary state and local authorizations to render the local service described.

(F) The authorization herein granted is limited to construction and acquisition of facilities during the calendar year 1963, and the total expenditures for facilities to be constructed and acquired hereunder are limited to a maximum of $250,000, with no single project to exceed a cost of $50,000.

(G) The estimated deliveries for the third year peak day at any single new delivery point is limited to a maximum of 5,000 Mcf of gas and for all new delivery points established is limited to a combined maximum of 25,000 Mcf of gas.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Conner, Jr., Charles R. Ross and Harold C. Woodward.

EX PARTE COMMUNICATIONS, DOCKET NO. R-235

ORDER NO. 265

AMENDING § 1.4(d) OF RULES OF PRACTICE AND PROCEDURE

(Issued March 20, 1963)*

The Commission on March 13, 1962, adopted regulations (§ 1.4(d) of our Rules of Practice and Procedure) expressly outlawing all *ex parte* communications to the Commissioners, the hearing examiners, and other staff personnel responsible for aiding the Commission in the preparation of their decisions, in all contested proceedings pending before the Commission (Order No. 244, 27 FPC 521; 27 F.R. 2573). This regulation, in our opinion, has successfully achieved its primary objective of reminding participants in Commission proceedings of what has always been true—that the Commission operates in quasi-judicial capacity in rendering decisions which by statute or regulation are to be decided on the record after public hearing, and that in such circumstances private communications, be they directed to matter of fact, law, or policy, cannot be considered or entertained.

We have given further consideration to these regulations in the light of our experience thereunder and in context of the recommendations of the Administrative Conference of the United States, which has recently made a general survey of the problem as it affects the administrative process generally. Based upon this study, we are by this order revising our existing regulations to define more clearly the nature of the prohibited communications and to specify in somewhat greater detail the procedures which the Commission will follow if and when prohibited communications are nevertheless received.

The regulations as here amended continue the existing prohibitions against off-the-record communications by parties to proceedings or persons acting on their behalf, but make clear that the Commission's duty to determine contested proceedings on the hearing record equally precludes it from giving consideration to non-record pleadings or communications submitted by persons not associated with any of the parties who seek to present their views as to the contested issues by any means other than those provided for in our rules. In addition, the regulations as amended prescribe the procedures by which written communications of an *ex parte* nature received by the Commission will be associated with the Commission's public files relating to the proceeding. The regulations make clear that permission to file rebuttal information will be granted only in extraordinary circumstances where dictates of fairness so require and that the normal treatment of such communications will be to ignore them.

It appears that the amendments adopted herein pertain to Commission practice and procedure and hence that the notice requirements of section 4(a) of the Administrative Procedure Act are not applicable.

---

*Published in the Federal Register on March 23, 1963 (28 F.R. 2899).

The Commission finds:

(1) The amendment adopted herein is necessary and appropriate for the purposes of administration of the Federal Power and Natural Gas Acts.

(2) Good cause exists that the amendment herein adopted becomes effective forthwith.

The Commission, acting pursuant to the authority granted by the Federal Power Act, as amended, particularly sections 308 and 309 thereof (49 Stat. 858; 16 U.S.C. 825g, 825h) and the Natural Gas Act, as amended, particularly sections 15 and 16 thereof (52 Stat. 829, 830; 15 U.S.C. 717n, 717o) *orders:*

(A) Paragraph (d) of § 1.4, Rules of Practice and Procedure, Subchapter A, Chapter I of Title 18 of the Code of Federal Regulations, is amended to read as follows:

(d) *Ex parte communications.* In order to avoid all possibilities of prejudice, real or apparent, to the public interest and persons involved in proceedings pending before the Commission—

(1) No person who is a party to, or his counsel, agent, or other person acting on his behalf, and no interceder in, any on-the-record proceeding, shall submit *ex parte*, off-the-record communications to any member of the Commission or of his personal staff, to the hearing examiner, or to any employee participating in the decision in such proceeding, regarding any matter at issue in any contested on-the-record proceeding, except as authorized by law; and no Commissioner, member of his personal staff, hearing examiner, or any employee participating in the decision in such proceeding, shall request or entertain any such *ex parte*, off-the-record communications. For the purposes of this paragraph, the term "contested on-the-record proceeding" means a proceeding required by statute, constitution, published Commission rule or regulation or order in a particular case, to be decided on the basis of the record of a Commission hearing, and in which a protest or a petition or notice to intervene in opposition to requested Commission action has been filed; the term "interceder" shall include any individual outside the Commission, whether in private or public life, partnership, corporation, association, or other agency, other than a party or an agent of a party, who volunteers a communication.

(2) All written communications prohibited by subparagraph (1) shall be delivered to the Secretary of the Commission who shall place the communication in public files associated with the case, but separate from the record material upon which the Commission can rely in reaching its decision.

(3) A Commissioner, member of his immediate staff, hearing examiner, or employee participating in the decision in such proceeding who receives an offer of any communication concerning any matter at issue in as on-the-record proceeding shall decline to listen to such communication and shall explain that the matter is pending for detemination. If unsuccessful in preventing such communication, the recipient thereof shall advise the communicator that he will not consider the communication, and he shall promptly and fully inform the Commission of the substance of the communication and the circumstances thereof, so that the Commission will be enabled to take appropriate action.

(4) Requests for an opportunity to rebut, on the record, any facts or contentions contained in an *ex parte* communication which the Secretary has associated with the record may be filed in writing with the Commission. The Commission will grant such requests only where it determines that the dictates of fairness so require. Where the communication contains assertions of fact not a part of the record and of which the Commission cannot

take official notice, the Commission in lieu of receiving rebuttal material normally will direct that the alleged factual assertion and any proposed rebuttal be disregarded in arriving at a decision. Nor will the Commission normally permit rebuttal of *ex parte* endorsements or oppositions by civic or other organizations by the submission of counter endorsements or oppositions.

(5) The prohibitions contained in subparagraph (1) hereof shall apply from the time the Commission announces that an on-the-record hearing will be held.

[Secs. 308 and 309, 49 Stat. 858; 16 U.S.C. 825g, 825h; secs. 15 and 16, 52 Stat. 829, 830; 15 U.S.C. 717n, 717o.]

(B) The amendments herein adopted shall become effective upon the issuance of this order.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

APPLICATIONS FOR SALE, LEASE OR OTHER DISPOSITION, MERGER OR CONSOLIDATION OF FACILITIES OR FOR PURCHASE OR ACQUISITION OF SECURITIES OF A PUBLIC UTILITY, DOCKET NO. R-236

ORDER NO. 266

AMENDING § 33.1 OF REGULATIONS UNDER THE FEDERAL POWER ACT

(Issued March 20, 1963)*

This order amends § 33.1 of the Commission's Regulations under the Federal Power Act so as to clarify the applicability of the Commission's Regulations governing the filing of applications for sale, lease or other disposition, merger or consolidation of facilities and for the purchase or acquisition of securities of a public utility. As amended the section sets forth in more detail the situations where applications must be filed, and codifies the Commission's previous interpretative order (*Southern California Edison Co.*, Docket No. E-7049, issued November 5, 1962, 28 FPC 787) holding that Section 203 applies to the acquisition by a public utility of all electrical facilities, irrespective of the legal status of the seller, including facilities of muncipalities and intrastate companies not otherwise subject to the Federal Power Act.

The Commission finds:

(1) The amendment adopted herein is necessary and appropriate for the purposes of administration of the Federal Power Act.

(2) Since the amendment herein adopted involves matters of interpretation, practice and procedure, notice or hearing under Section 4 (a) of the Administrative Procedure Act is not required.

(3) Good cause exists that the amendment herein adopted become effective forthwith.

The Commission, acting pursuant to the authority granted by the Federal Power Act, as amended, particularly sections 203 and 309 thereof (49 Stat. 849, 858; 16 U.S.C. 824b, 825h) *orders:*

---

*Published in the Federal Register on March 23, 1963 (28 F.R. 2900).

(A) Section 33.1 Subchapter B of Chapter I, Title 18 of the Code of Federal Regulations is hereby amended to read as follows:

§ 33.1 Applicability

The requirements of this part will apply to public utilities seeking authority under section 203 of the Federal Power Act. This authority extends to—

(1) The disposition by sale, lease or otherwise by a public utilty of the whole of its electric facilities subject to Commission jurisdiction or any part thereof of a value in excess of $50,000.

(2) The merger or consolidation, directly or indirectly of the facilities of a public utility with those of any other person having a value in excess of $50,000. This includes the acquisition by a public utility of the electric facilities of any other person whether or not such person is otherwise subject to the provisions of Part II of the Federal Power Act (including municipalities and companies not engaged in the interstate transmission or sale of electric energy.)

(3) The purchase, acquisition or taking by a public utility of any security of any other public utility.

[Sections 203, 309, 49 Stat. 849, 858; 16 U.S.C. 824b, 825h]

(B) The amendment prescribed herein shall become effective upon issuance of this order.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, and L. J. O'Connor, Jr.

PHELPS DODGE CORPORATION, PROJECT NO. 2304

ORDER ISSUING LICENSE (MAJOR)

(Issued March 20, 1963)

Application was filed on December 7, 1961 and supplemented on August 8, 1962, by Phelps Dodge Corporation (Applicant) of Douglas, Arizona, for license under Section 4(e) of the Federal Power Act (Act) for proposed major Project No. 2304, to be known as the Blue Ridge Project, to be located on East Clear Creek, a tributary of the Little Colorado River, and on the East Verde River, in Coconino and Gila Counties, Arizona, approximately 45 miles southwest of Winslow, Arizona, and affecting lands of the United States within the Coconino and Tonto National Forests.

Project No. 2304, as hereinafter described, will have as its primary purpose the replacement of water used by the applicant for industrial purposes to a water users association for irrigation purposes. The electric energy generated by the project will be used exclusively for the pumping of water for delivery in exchange for water used for mining and milling ore.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, have advised that the proposed project would not affect any existing or proposed projects of the Corps of Engineers, and that special terms and conditions in the interest of navigation are not deemed necessary for inclusion in any license for the project.

The Department of Agriculture, in reporting on the application stated that, under stipulated conditions, the construction of the proposed reservoir would enhance the recreational and fishing resources of the National Forest lands

within the project area. It recommended for inclusion in any license issued for the project, certain special conditions, which we adopt, in the interests of recreation and for the protection of the National Forests affected.

The Department of the Interior, in reporting on the application has recommended, for inclusion in any license issued for the project, certain special conditions in the interest of fish and wildlife resources and recreation in the area involved which we have also adopted in substance.

The State Land Commissioner of the Arizona State Land Department has issued permits to the applicant for the appropriation of the waters involved and the construction of an impounding dam to store the waters. The Arizona Fish and Game Department has been advised by the applicant that there is no objection to the management of the lake by the Department for public fishing and endorses the project "for this reason as well as an aid to the mining economy of the State."

On February 19, 1962, the City of Los Angeles through its Department of Water and Power petitioned to intervene and on February 20, 1962, the State of California, through its Colorado River Board, *et al.*, petitioned to intervene in this proceeding. The petitions allege that, by diversion of water above the proposed Bridge Canyon Dam and Hoover Dam, the project would adversely affect power production at both sites and also California's consumptive use of water below Hoover Dam. By answers dated March 1, 1962, the applicant challenges the standing to intervene of the petitioners and points out that only a minimal amount of water, approximately 11,000 acre-feet a year, is involved in the diversion.

We have considered the petitions to intervene and conclude that, assuming the petitioners' interests are sufficient to give them standing to intervene, they have not alleged grounds which would warrant the rejection of the application for license. The issuance of a license will not affect the legal rights of the petitioners to consumptive use of the waters of the Colorado River System. The project will cause a minimal reduction in the flow of the Colorado River into Lake Mead and consequently, by the same amount, the waters available for division among the lower Colorado River Basin States below Hoover Dam. California's legal rights in waters of tributaries of the Colorado River within Arizona are in litigation in the case of *Arizona* v. *California*, a case within the original jurisdiction of the Supreme Court of the United States which is presently pending decision [decided June 3, 1963, 373 U.S. 546]. California is urging in that case that Arizona's consumptive use of waters of tributaries to the Colorado River are a part of Arizona's basic entitlement to water under the Boulder Canyon Project Act. If California's position is upheld, the appropriation of water by this project under permit of the State of Arizona will not result in a reduction of water to which California is legally entitled below Hoover Dam but will be used to reduce Arizona's share of such waters; if Arizona's legal contentions are upheld, Arizona will be able to authorize this consumptive use of water without diminution of its rights to waters of the main stream of the Colorado River.

Section 13(c) of the Boulder Canyon Project Act requires this Commission to make any license which it issues on the Colorado River System subject to the Colorado River Compact and this, of course, we shall do. The Colorado River Compact makes the use of water for power production subservient to such consumptive uses as this project is designed to facilitate. The minimal amount by which the project may reduce the share of power available to petitioners from downstream projects is therefore not of great significance.

The Commission finds:

(1) The proposed project will affect lands of the United States.

(2) The proposed project would consist of:

(a) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the Applicant or by the United States; such project area and project boundary being more generally shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2304–2) Regional and Vicinity Map;

Exhibit K: (FPC No. 2304–3) Detail Map of Project Area.

(b) The project would consist of a concrete arch dam about 160 feet high with spillway at elevation 6720 feet on East Clear Creek, creating a reservoir with a gross capacity of 15,000 acre-feet with usable storage of 12,800 acre-feet and having a surface area of 275 acres; intake and pumphouse on reservoir shore; a steel pressure pipeline about 9 miles in length to a balancing reservoir with a capacity of about 10 acre-feet at elevation 7276 feet on the Mogollon Rim divide between the Little Colorado and Verde River Basin; a penstock pipe about 2.5 miles long to a power plant with impulse wheel nozzle at elevation 5784 feet, connected to a 2800 kw generator (3730 horsepower); switchyard; 33 kv transmission line to pumphouse on reservoir shore; access road and other appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheet 1 (FPC No. 2304–13) General Plan Arch Dam and Spillway; Sheet 3 (FPC No. 2304–14) Arch Dam and Buttresses Typical Sections; Sheet 5 (FPC No. 2304–15) Spillway from Reservoir; Sheet 6 (FPC No. 2304–10) Intake and Pumping Plant; Sheet 7 (FPC No. 2304–11) Pipeline and Penstock Profile and Details; Sheet 8 (FPC No. 2304–12) Power Generation Station.

Exhibit M: Two typewritten sheets entitled "General description of mechanical, electrical and transmission equipment", filed with the Commission on December 7, 1961.

(c) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(3) Applicant is a corporation organized under the laws of the State of New York; is duly qualified to do business within the State of Arizona; and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(4) Public notice of the application has been given. Petitions to intervene have been filed as recited above. No conflicting application is before the Commission.

(5) The issuance of a license for the project as hereinafter provided will not interfere or be inconsistent with the purposes for which the Coconino and Tonto National Forests have been created or acquired.

(6) The issuance of a license for the project as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(7) The project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon the terms and conditions hereinafter imposed.

(8) The installed horsepower capacity of the proposed project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charges is 3,700 horsepower. Power generated by the project will be used only for pumping water to the Verde River Basin to replace water taken from the Black River for metallurgical processes.

(9) The exhibits designated and described in finding (2) above conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Phelps Dodge Corporation (Licensee) under Section 4(e) of the Federal Power Act for a period of 50 years, effective as of January 1, 1963, for the construction, operation and maintenance of Project No. 2304 located on East Clear Creek, a tributary of the Little Colorado River, and East Verde River, Arizona, and affecting lands of the United States within the Coconino and Tonto National Forests, subject to the terms and conditions of the Federal Power Act, which is incorporated herein by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act; and subject to the provisions of the Colorado River Compact.

(B) This license is also subject to the terms and conditions set forth in Form L–2, December 15, 1953, entitled "Terms and Conditions of License for Unconstructed Major Project Affecting Lands of the United States" (17 FPC 62), which terms and conditions designated as Articles 1 through 24, are attached hereto and made a part hereof, except for Articles 13 and 17; and subject to the following special conditions set forth herein as additional articles:

Article 25. The Licensee shall commence construction of the project within one year from the effective date of this license, shall thereafter with due diligence prosecute such construction, and shall complete the project and place it in operation within three years of the effective date of the license.

Article 26. The Licensee shall do everything reasonably within its power and shall require its employees, contractors, and employees of contractors to do everything reasonably within their power, both independently and upon the request of the Federal Power Commission, to prevent, make advanced preparations for suppression, and suppress fires on the lands to be occupied or used under the license. The Licensee shall be liable for and pay the costs incurred by the United States in suppressing fires caused from the construction, operation, or maintenance of the project works or of the works appurtenant or accessory thereto under the license.

Article 27. The Licensee shall make releases into East Verde River at such time and at such volume that will not exceed the channel capacity. Channel clearing or improvements on the river shall be made only upon approval of plans for such by the Federal Power Commission.

Article 28. The Licensee shall make water releases into East Clear Creek at the dam during normal no-flow periods that will maintain natural pools of water

in the Creek between the dam and Barbershop Creek. The amount and time of water releases shall be determined by the Federal Power Commission upon its own motion or upon recommendation of the United States Forest Service.

Article 29. The transmission line shall not be located within 300 feet of the East Verde River, unless location within 300 feet of the river is approved in advance of construction by the Federal Power Commission, and Licensee shall file for approval in accordance with the Commission's rules and regulations, revised Exhibit F and Exhibit K, showing the location of the constructed line, within one year after the completion of the project.

Article 30. The Licensee shall prior to flooding, clear all lands in the bottoms and margins of the reservoir up to high water level, and shall dispose of all temporary structures, unused timber, brush, refuse, or inflammable material resulting from clearing of the lands or from the construction and maintenance of the project works. In addition, all trees along the margins of the reservoir which may die during operation of the project shall be removed. The clearing of the lands and the disposal of the material shall be done with due diligence and to the satisfaction of the authorized representative of the Commission.

Article 31. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: *Provided*, That the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and, *Provided further*, That the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 32. The Licensee shall, within one year from the effective date of this license, file with the Commission a recretional use plan for the project which shall include not only recreational improvements which may be provided by others, but the recreational improvements the Licensee plans to provide.

Article 33. The Licensee shall construct, maintain and operate such protective devices and shall comply with such reasonable modifications of the project structures and operation in the interest of fish and wildlife resources, provided that such modification shall be reasonably consistent with the primary purpose of the project, as may be prescribed hereafter by the Commission upon its own motion or upon recommendation of the Secretary of the Interior or the Arizona Department of Fish and Game after notice and opportunity for hearing and upon a finding that such modifications are necessary and desirable and consistent with the provisions of the Act: *Provided further*, That subsequent to approval of the final design drawings prior to commencement of construction no modifications of project structures in the interest of fish and wildlife resources which involve a change in the location, height or main structure of the dam, or the addition of or changes in outlets at or through the dam, or a major change in generating units, or a rearrangement or relocation of the powerhouse, or major changes in the spillway structure shall be required.

Article 34. Whenever the United States shall desire, in connection with the project, to construct fish handling facilities or to improve the existing fish han-

dling facilities at its expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such fish handling facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall modify the project operation as may be prescribed by the Commission, consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish handling facilities constructed or improved by the United States under the provisions of this article.

This article shall not be interpreted to place any obligation on the United States to construct or improve fish handling facilities or to relieve the Licensee of any obligation under this license.

Article 35. The Licensee shall cooperate with the Arizona Game and Fish Department in the selection of locations and development of plans for installations to facilitate access by fishermen to the shoreline and water surface of Blue Ridge Reservoir.

Article 36. The Licensee shall refrain from removal of water from Blue Ridge Reservoir for delivery to the East Verde River whenever the water surface elevation is at or below 6,640 feet mean sea level.

Article 37. The Licensee shall within one year from the date of completion of the project file with the Commission revised Exhibits F and K to define the final project boundary. The project area shall be limited to that area actually needed for project operation and maintenance. The Licensee shall, prior to the submission of the revised exhibits to the Commission for approval, consult with the Regional Forester, U.S. Forest Service, Albuquerque, New Mexico, as to the project boundary.

Article 38. The Licensee shall pay to the United States the following annual charges:

(1) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, one (1) cent per horsepower on the authorized installed capacity (3700 horsepower) plus two and one-half (2½) cents per 1000 kilowatt-hours of gross energy generated during the calendar year for which the charge is made; or such other amounts as may hereafter be determined as necessary to reimburse the United States for the cost of Administration.

(2) For the use, occupancy and enjoyment of United States lands for project purposes, an amount to be hereinafter determined.

(3) For the use, occupancy and enjoyment of United States lands for transmission line right-of-way an amount to be hereafter determined.

Article 39. The Licensee shall after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, the benefits of which shall be shared equitably by the participants in such coordination. In the event the participants cannot agree thereon, the Commission shall equitably apportion the benefits after notice and opportunity for hearing, upon its own motion or upon motion of any party.

Article 40. The Licensee shall install additional capacity and make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 41. The rights of the Licensee to the waters of East Clear Creek shall be subject to and controlled by the Colorado River Compact.

(C) The exhibits designated and described in finding (2) above are hereby approved as part of this license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, Charles R. Ross, and Harold C. Woodward.

AMERE GAS UTILITIES COMPANY, DOCKET NO. CP63-179

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued March 21, 1963)

On December 21, 1962, Amere Gas Utilities Company (Applicant), filed an application in Docket No. CP63-179, pursuant to Section 7(b) of the Natural Gas Act, for authority to abandon certain facilities used to compress and transport natural gas from fields in Raleigh County, West Virginia, consisting of two 220 horsepower gas engine driven compressor units complete with the auxiliary equipment and facilities integral thereto located at its Wingrove Compressor Station; also 16.5 miles of 5-inch pipeline extending from its interconnection with Atlantic Seaboard Corporation's 20-inch pipeline at Pipestem in Summers County, West Virginia, all as more fully described in the application.

The pipeline to be abandoned was constructed in 1932 and is used in conjunction with Applicant's newer 8-inch pipeline to supply the requirements of Princeton and Athens, West Virginia and Bluefield Gas Company, a wholesale customer. Applicant states that the 8-inch line can supply all present requirements of those customers and that the pipeline to be abandoned is in a deteriorated condition.

The compressor units are to be abandoned because the remaining gas reserves in the Raleigh Count fields have become depleted to the point where continued operation of the units is no longer warranted.

No change in service to existing customers will result from the proposed abandonment of the facilities. It is estimated that the annual operating expenses will be reduced by approximately $22,500.

Salvage value and cost of retirement of the facilities to be abandoned are $64,400 and $7,500, respectively.

Pursuant to due notice, a public hearing was held in Washington, D.C., on March 11, 1963, respecting the matters involved in and the issues presented by the application. No petition to intervene or protest to the granting of the application has been received. Staff Counsel moved orally at the hearing that the intermediate decision procedure be omittted and the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company within the meaning of the Natural Gas Act and the facilities hereinbefore described are parts of the Applicants pipeline system and subject to the jurisdiction of the Commission.

(2) Depletion of the gas fields in Raleigh County, West Virginia makes unnecessary continued operation of the compressor units to be abandoned and deterioration of the 5-inch pipeline warrants abandonment thereof, as proposed.

(3) A request made during the public hearing by Staff Counsel for the omission of the intermediate decision procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record and, not having denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the said rules.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon the facilities heretofore described, as more fully described in the application.

(B) Applicant shall advise the Commission as to the date of abandonment of the said facilities within 10 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62-63; NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62-66

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued March 21, 1963)

On October 29, 1962, El Paso Natural Gas Company (El Paso) filed in Docket No. CP62-63, and on October 23, 1962, Northern Natural Gas Company (Northern) filed in Docket No. CP62-66, applications to amend the Commission's order issued March 19, 1962, in the above-docketed proceedings, to authorize the exchange and delivery, on a best efforts basis, of up to 50,000 Mcf of natural gas per day for the period ending December 31, 1953, rather than the 30,000 Mcf "best efforts" exchange for a period ending December 31, 1962, heretofore authorized in these proceedings, all as more fully set forth in the applications herein.

El Paso and Northern have entered into a letter agreement, dated September 19, 1962, amending the original exchange agreement, to provide for the increase in exchange volumes for a period ending December 31, 1963.

Northern states that it is in an under produced position in Lea County, New Mexico, and has had approximately 15 million Mcf of allowables cancelled in the past in this field. Further, Northern states that it is currently carrying in excess of 6.5 million Mcf of underage. In order to alleviate this situation, Applicants request authorization to exchange the additional volumes and to extend the period of exchange, as proposed herein.
